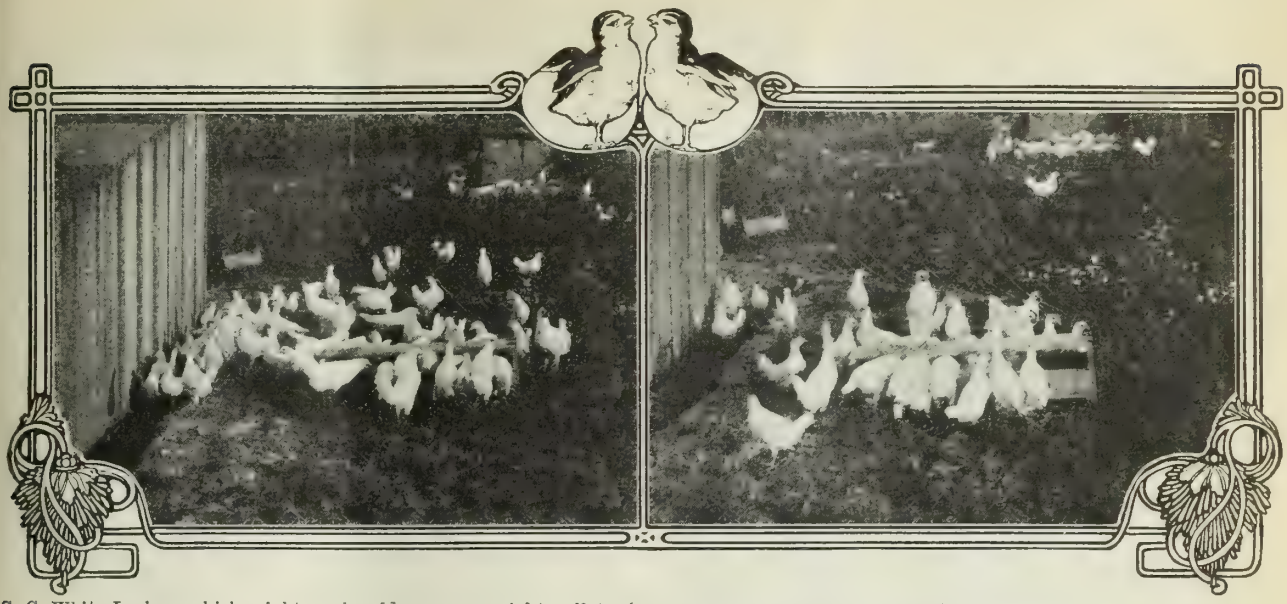
weather became warmer, it was gradually decreased to 75 degrees by the end of the tenth day. The morning following after the chicks' first night in the brooder the little fellows were carried out in front of the house to have their pictures taken for A. P. J. About noon the water fountains were filled with water that had the chill taken off. We used three fountains to give them all a chance. By afternoon they were all digging around quite lively and acted hungry. They were given a little hard boiled egg and dry bread crumbs mixed and spread out on a clean board. One boiled egg ground up shell and all was mixed with about a pint of hard bread crumbs and seasoned a little with pepper and salt and a little sharp sand added. The whole well mixed together was given at one feeding to the lot. At first they just looked at it a little while, then one picked up a bit and started to run and then all of them began to get into it and it didn't take long to clean the food all up. They certainly seem to like it. The next morning we started in early and fed them a little of the egg and bread crumb mixture every two hours, and also provided a shallow box with dry wheat bran for them to work at whenever they liked, also a box of fine charcoal was provided. On the third day we began substituting a little pin head oatmeal twice a day for part of the egg and bread crumb ration. This manner of feeding was continued for the first week, always keeping a supply of bran in the bran-box. About the fifth day we gave them tender, fresh clover cut up fine with the shears. This was fed twice a day.



A little yard was made outside the brooder house and they were allowed to run in this on pleasant days from the first. The ground of the run was kept spaded up for them to work and scratch in. To teach them the way in and out quickly, we placed a board from the entrance to the brooder leading to the yard and sprinkled food on it and after a time or two they needed no guiding hand to gather them in. They began to grow rapidly as soon as they became used to the spaded ground yard, spending all their spare moments digging for worms. We also gave them cut up raw potato, which they will fight for as eagerly as they do for worms. We varied the program by giving a good mixed chick food and by keeping a hopper of dry mash before them constantly. The dry mash was made up as follows:

Two parts wheat bran.
One part cornmeal.
One part middlings.
One-half part oatmeal or flake.
One-quarter part fine charcoal.

A little fine best beefscrap and scant amount of salt. This was well mixed and kept before them at all times. The chick food was continued until the chicks were large enough to take

S. C. White Leghorn chicks four weeks old, average weight 5 to 6 ounces. See first prize article, "Success Growing S. C. W. Leghorn Chicks."

S. C. White Leghorn chicks eight weeks old, average weight pullets, 1 pound to 1¼ pounds; cockerels, 1 pound 6 ounces to 1½ pounds. See first prize article, "Success Growing S. C. W. Leghorn Chicks."

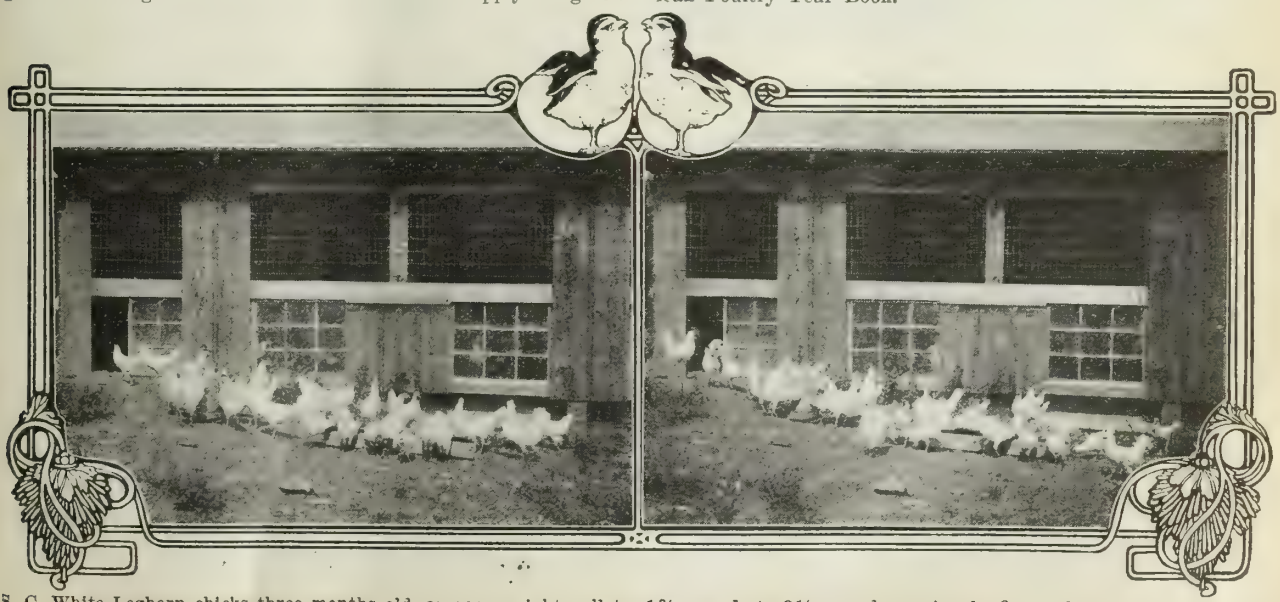
whole grains, and cut green clover supplied them until they had an opportunity to get it for themselves.

When six weeks old they were removed from the brooder house and put in a large coop, which we fixed up with rounded tin corners to prevent the chicks from crowding and smothering one another on cool nights. At first we used muslin curtains on the coop, but gradually as they became used to it we dispensed with them. These coops were placed in a large yard, giving the chicks a good range, making it difficult to get all the birds in the pictures, and they had grown so that I could only get a part of them in the last two pictures, having to date 150 chicks left in this lot.

As soon as possible we began feeding whole grains, consisting of wheat and oats and large cracked corn. To lessen the expense we discontinued the dry mash and made up a wet mash mixture as follows:

One part wheat bran.
One part cornmeal.
One part middlings.
One-half part oatmeal or flake.

A little charcoal and salt to season. After this is thoroughly mixed, half a pint of short cut alfalfa is steamed and added to three quarts of the mash and mixed into a crumbly mash, feeding just what they will clean up quickly at noon, feeding grains morning and afternoon and a liberal supply of green stuffs at all times. This we expect to continue, adding beef-scrap a little later.



The chicks all look fine and healthy and are about even in size. Their weights taken at time photographed are as follows:

AVERAGE WEIGHT.

One day old, 1¼ to 1½ ounces; two weeks old, 2¾ to 3 ounces; four weeks old, 5 to 6 ounces; eight weeks old, 1 pound to 1¼ pounds (pullets), 1 pound 6 ounces to 1½ pounds (cockerels); three months old, 1¾ pounds to 2¼ pounds (pullets), 2 pounds to 2½ pounds (cockerels).

———o———

You will often hear of some man leaving a good position to enter the poultry business. He doesn't know just what the poultry business is, but he hears of his neighbors making money with poultry. He starts in to make money, instead of starting in to build up a business, he forgets or does not know that he has joined one of the greatest industries in the world, an industry that has grown until it exceeds "a billion" yet is still in its infancy. In less than a year this man is "broke" simply because he used "imagination" instead of "hard work and brains." To this type of men our advice is to let your wife try. There are many cases where she has put the credit on the right side of the ledger, and these cases with just how it was done will appear in the woman's section of the new 1915 American Poultry Year Book.

S. C. White Leghorn chicks three months old, average weight pullets, 1¾ pounds to 2¼ pounds; cockerels, 2 pounds to 2½ pounds. See first prize article, "Success Growing S. C. W. Leghorn Chicks."

Poultryman's Practical Dispensatory

Chapter V—Petroleum Products and Turpentine—Their Many Uses and Abuses

By J. H. Petherbridge

CHAPTER IV being devoted to "coal tar products," a natural sequence demands that it be followed by some observations on the closely related topic of some petroleum products employed by poultrymen. Whereas coal tar is the product of the *artificial* distillation of coal, crude petroleum represents the *natural* distillation of coal and other carbonaceous matter, both animal and vegetable, in the vast subterranean laboratories of nature.

Crude petroleum, in its world-wide distribution, may exhibit minor variations of color, density and its content of oxygen, nitrogen, sulphur and other occasional elements, but 90 to 96 per cent of its bulk is made up of the hydro-carbons. Its medicinal qualities, actual and fancied, have been recognized from the early ages, and the ancient records of Japan and China refer to the employment of natural gas and oil for heating and lighting. Herodotus describes the "oil pits" of Babylon, and the prophet Isaiah speaks of "the land becoming burning pitch that shall not be quenched night or day, but the smoke thereof go up forever." Those who have witnessed an oil well on fire will testify to the realism of this description.

The history of the exploiting of crude petroleum as a panacea for many ills of man and beast, offers a demonstration that there were fakirs long before the twentieth century, and that to disguise a natural and cheap product under a trade name for the purpose of increasing the demand and profit and maintaining a monopoly is no new game. In the fifteenth century, as "St. Quirinus Oil," the petroleum of Bavaria was doubtless in greater demand for its saintly cognomen; and saints still seem to run to oil, five centuries later, as the patent medicine shelves of any drug store will testify. But in the sixteenth century in direct contradistinction to the heavenly appeal, I find petroleum exploited successfully as "Earth Balsam." In the prenatal stage of the great oil industry of the United States, a Kentucky company as early as 1829 was selling crude oil as "The American Medicinal Oil," and the immediate predecessors of Standard Oil, the Seneca Oil Co., prior to sinking their first well at Oil Creek, Pa., in 1859, had for many years sold a crude petroleum obtained from the shores of Seneca Lake, N. Y., under the name of "Seneca Oil," advertising it as a wonderful embrocation and dressing for wounds. But for many years now, except as an unknown constituent of certain patented "oils" and liniments, crude petroleum is utilized only as a lubricant and in medicine has been superseded by paraffin oil and

Petrolatum.

by-products of the distillation and refining of the crude petroleum in the production of gasoline and kerosene.

You may be more familiar with petrolatum as "Cosmoline," "Vaseline," or as "Petroleum Jelly." These are all one and the same product, but you usually have to pay something additional for the proprietory name and in buying it as "petrolatum" you are pretty sure of obtaining an article of American manufacture, by far the best for your purpose. In buying it in any considerable quantity, if you can have choice of several grades, select a No. 2 or No. 3 in preference to a No. 1, for they will cost you less and are far richer in medicinal value. I prefer a rather dark petrolatum with a greenish tinge to one of a golden yellow color and translucent.

In my preceding article under the head of "carbolic acid" I gave working formulas for a carbolized petrolatum and a sulpho-carbol ointment, and also referred to the superiority of petrolatum over lard as a base for all ointments and salves. As I am very sure readers of the A. P. J. retain their journals for reference, a repetition at this early date seems needless. A few words, however, in relation to the proper method of *making* an *ointment* may not be amiss:

In incorporating a drug in powder form with a fatty base, first see that the powder contains no lumps or grit and place it in the center of your stone slab or plate of glass and rub it up *with a very small portion* of the base until all the powder is taken up and continue adding the base *a little at a time*, working each addition with your spatula or knife to uniform consistency.

Such simple directions may seem superfluous, but it has been my observation that the amateur invariably reverses this process, by placing the entire amount of petrolatum or lard on the slab, sifts the powdered drug over it and attempts to work it into a smooth and uniform mass, *and rarely succeeds.* If the drug to be incorporated is in the form of a liquid or oil, it is best to melt the petrolatum with a gentle heat and slowly stir in the liquid or oil and continue stirring until the mass thickens as it cools. Alcoholic extracts or oils are extremely difficult to accurately distribute through a fatty mass by any other method, but you must avoid having the petrolatum base *hot;* use only sufficient heat to liquify it, otherwise the heat may dissipate volatile principles it is important to retain. As I may have occasion to recommend or comment on other ointments during the course of these series, I trust the preceding "directions" may prove of practical value.

The petroleum product that demands the most extended notice, not for its intrinsic value to poultrymen but because of its frequent recommendation for almost every ill of chickendom, is the illuminant—

Kerosene or Coal Oil.

This product is so well known, as to its appearance, cost, production and distribution, that I shall avoid further mention along these lines. Its *history,* as an important article of commerce, marvelous, romantic and tragic, is also a more than "twice told tale" to every reader. I therefore can confine my discussion to its actual and assumed value to poultrymen as an insecticide, germicide and remedial agent extraordinary. Frankly, the only use for which I can recommend kerosene in poultry practice, save as "midnight oil" for study and account keeping, is as an insecticide for the destruction of the Red Mite that breeds and hides in the cracks and crannies of our poultry houses.

The sole superiority of kerosene over other insecticides for this purpose lies in its penetrating and flowing qualities; it reaches the lowest nooks and tiniest crevices better than the heavier coal tar products. But owing to this same volatile characteristic and rapid evaporation it should be remembered that kerosene is short-lived in its action. The application of *today* may not answer for the needs of *tomorrow.* To destroy mites, larva and eggs of this pestiferous parasite, there must be actual contact with the kerosene, *the odor or fumes are not sufficient.* Hence, an oil can and brush are better instruments for distribution than a sprayer, but should you conclude that the latter is more convenient, 'twill be well to add to each quart of kerosene, two ounces of crude carbolic acid.

I cannot endorse the oft repeated advice of kerosene as a cure for roup, colds, catarrh and bronchitis, either by means of dipping the fowl's head into a bucket of water covered with a film of oil, the internal administration from a teaspoon, or by floating it on their drinking water. All these kindred ailments are distinguished by a more or less inflamed and congested condition of the mucus membrane of the head, throat, nasal passages and bronchial tubes. To effect a cure, it is necessary not only to kill the germs but also to heal and restore to normal condition the diseased membrane.

Kerosene is described as "a powerful and dangerous 'irritant' to the cuticle and mucus membrane." How then can it also exert a soothing and healing action on said membrane? It is true that as a home remedy kerosene is sometimes successfully used as an *external* application to the throat and chest to allay *internal* inflammation and congestion, but in such cases it acts as a "counter-irritant," and it is only as a counter-irritant kerosene can be of service. But so long as we take any pride or satisfaction in our chickens wearing feathers, efficient counter-irritants are barred from poultry practice. Poultry editors probably have more inquiries regarding "the loss of

feathers'' than any other one form of ''trouble''; the answer may be vermin, depluming mites, favus, or feather-pulling, but the writer wonders if the too free resort to kerosene may not often be the correct explanation? I recall reading an inquiry for a remedy for the Texas flea, and the reply was as follows: ''Apply kerosene, full strength, freely to head of fowl; the oil won't hurt the fowl but will kill the fleas.'' But if the advice was followed, it's a safe bet that one Texas poultryman could exhibit a flock of bald headed chickens. And it must not be overlooked that any application powerful enough to cause the feathers to drop out must further irritate a cuticle already sensitive and sore from the parasite's ravages.

Reverting to the kerosene treatment for roup, etc., I presume the theory is that it kills the germs of the disease; perhaps it does; but there are many drugs that will kill germs but only at the expense of a shock to the nervous system of the fowl or injury to the cuticle or mucus membrane that will take up much of the fowl's vitality to repair.

I fear we are all a little daffy about germs anyway. We are told that there are both good and bad germs, but even the bad ones have too much self-respect to come where they have not been invited. What the industry needs is not more germicides but less germ-allures. It's too late to go gunning for the germ that is *in* the sick chicken; *its* mission was accomplished ere we noted the symptoms. Wage vigorous war on the germs *without*, and if the good germs can't lick the bad ones within, it is because you haven't cultivated them or given them a chance to keep their powder dry.

Spirits or Oil of Turpentine.

obtained by the distillation of resins from sundry species of southern pine and fir would seem to have no legitimate place in a letter devoted to petroleum products, but I hope to show that there is no inconsistency. In physical appearance, chemical composition and in their use and abuse as poultry remedies, there exists a close analogy between the spirits of turpentine and kerosene.

The bulk of each is made up of the same volatile and inflammable hydro-carbons, and neither are soluble in water.

Each when employed externally are readily absorbed by the unbroken skin, will quickly blister and destroy the plumage.

Given internally are dangerous irritants to the mucus membrane, unduly stimulate the kidneys and in large doses cause purging and hemorrhage of bowels.

I am not questioning but what both turpentine and coal oil may occasionally give good results, seemingly, but I do claim they are unnecessarily severe and cruel remedies, and that poultrymen can very well dispense with their services, as the *good* they *can* accomplish can be secured by other milder agents that carry no menace..

My father was a surgeon in the Civil War, a graduate of both the ''old'' and then ''new'' schools of medicine. He soon found that his soldiers would have none of his homeopathic treatment. They insisted on something ''strong,'' and the viler it tasted and the sicker it made them the greater their laudation of the dope.

As regards human ills, most of us have abandoned this position, but still maintain that same attitude in our ''doctoring'' of our fowls and domestic animals. More horses have been killed by fearfully and wonderfully compounded drenches than have from the colic for which they were drugged. As many chickens have been lost by injudicious and ill-advised remedies as have succumbed to ''roup'' and ''white diarrhoea.''

I have known turpentine to be advised as an injection into the vent for bowel trouble and even administered to baby chicks in the same manner as a cure and preventive for this same ''white diarrhoea.'' Did you in your young and savage days ever administer turpentine to the same part of a stray dog's anatomy; if so, you will recall that said dog needed all outdoors to express his opinion of turpentine so administered.

I wonder by what peculiar process of reasoning those who advocate an enema of turpentine or any other drug as a means to make immune the baby or growing chicks from white diarrhoea, cholera and roup refer to the treatment as ''inoculation?''

The pocket dictionary of medical terms defines inoculation as follows: ''An operation by which a disease may be artificially communicated by introducing the virus into the system by a puncture or scratch.'' *Inoculation* cannot be performed with a *remedy.*

To be successfully vacinnated you must be given a mild case of smallpox. If the injection of turpentine or any other drug can make your flocks immune against contracting white diarrhoea, cholera or roup it must be capable of developing in miniature the same pathological symptoms that are exhibited in these dread diseases.

I have no doubt but what in due time our expert investigators and bacteriologists will succeed in identifying and isolating the germs responsible for these and other ills that now afflict our birds and be able to furnish us with anti-toxines for both prevention and cure. But this consummation ''devoutly to be wished'' will come as no wierd *in-vent*-ion or wonderful discovery of commercialism, but as the demonstrated, time tried and tested result of years of scientific research by trained and skilled operators.

The shelves where the druggist of today keeps the drugs that are demanded by his prescription calls are *much more crowded* than they were thirty years ago when the writer washed the

THE THREE JOES.
Past, present and future breeders, and originators of the Parks Strain of Bred-to-Lay Barred Plymouth Rocks, Altoona, Pa.

graduates and cleaned the spatulas, but the same old drugs occupy *the front row* and the number of *new* remedies that have stood the test of even twenty years *are few indeed.* The up-to-date and conscientious pharmacist who does not substitute will tell you his heaviest money investment lies unemployed in new drugs that after a few calls cease to be in active demand, because in actual practice they have failed to make good.

But to return to our topic of turps; it is very true that oil or spirits of turpentine has certain and accepted values in therapeutics. It is an excellent vermifugue, followed by castor oil, particularly for the expulsion of the tape-worm; it is frequently employed in low types of fever, as in certain stages of typhoid and is occasionally used as an enema in obstinate constipation and the accumulation of gas in the bowels. But this seeming indorsement for its use with poultry it must be noted that turpentine so employed is always in the form of an emulsion or its irritating qualities modified by bland oils or mucilagenous mixtures. And such preparation is far from practical in poultry practice.

How The Turkey Got Its Name

Some Interesting Historical Facts About Our National Thanksgiving Day Bird—Its Popularity in Europe

By H. V. Tormohlen

"A turkey boiled is a turkey spoiled,
A turkey roast is a nation's boast,
But for turkey braised the Lord be Praised."

FIRMLY attached as has become the turkey with our national Thanksgiving Day, little has been known about the history of the turkey and how the turkey got its name has been a question that would compare favorably with "How old is Ann?" Yet if the American people have one fowl of which they are especially proud, that fowl is the turkey. And someone has fitly expressed it: "A Christmas without a Christmas tree, a Fourth of July without firecrackers, would be on a par with a Thanksgiving without a turkey."

The history of the turkey is extremely interesting, although unlike some of our other domestic fowls cannot boast of a long and eventful connection with domestic life, and like the goose cannot claim to have saved Rome from the Gauls, or to have been a sacred bird 4,000 years ago.

Previous to the year 1518, when the mainland of America was discovered, the bird was unknown to civilization. Prescott in his "Conquest of Mexico," states that Cortez was sent on his voyage of discovery and conquest with the understanding that he was to send to his emperor one-fifth of all the spoils taken. In July, 1519, Cortez dispatched "his first letters" to his emperor, Charles the Fifth, with a collection of fabrics, minerals and other products of the new world, and no doubt the turkey formed a part of this first importation, as Cortez found the bird easily obtainable from the Indians, being partly under domestication. Five years later the turkey reached England, being sent from this country by William Strickland, Sebastian Cabot's lieutenant, and, as bearing on the point, it is interesting to know that the crest of the Strickland family of Norfolk, England, is a turkey-cock "rampant," and that the crest was adopted at that time by William Strickland founder of the family and ancestor of the present baronet.

Barnby Googe, of England, in his famous "Four Books on Husbandry," has this to say about the early turkeys in Great Britain: "Turkey-cocks we have not long had among us, for before the year of our Lord 1530 they were not seen with us, nor, I believe, known to the old writers. By 1541 they had attained such popularity—though still rare and much prized—among trenchermen that Archbishop Cranmer forbade the appearance of more than one dish of turkey-cocks at state banquets. Some 14 or 15 years later a great law dinner was held at Christmas in the course of which two turkey-cocks and two poults were served with much pomp and ceremony; 1573 saw them an established and recognized feature of Yuletide fare, especially in the rural districts of England, for we find the old chronicler Tusser writing at this date:

"Beef, mutton, and port, shred-pies of the best;
Pig, veal, goose, and capon and turkey well drest."

Turkeys were first eaten in France at the great banquet

AN ACTUAL PHOTOGRAPH OF WILD TURKEYS.

The naturalist must know intimately the habits and feeding grounds of the wild turkey and use infinite care and pains to get a picture like this. He must know just where to find them. Fortunately the author of this article found these wild turkeys already posed in the Field Museum of Natural History in Chicago, where they have been faithfully mounted true to life and habits and so carefully prepared that the most careful observer could not detect that this photograph was not taken in the forest. There are six varieties of domestic turkeys recognized by the American Poultry Association—the Bronze, Black, White Holland, Narragansett, Bourbon Red and Slate, all of which have been bred from the wild turkey once so numerous. The Bourbon Red and Buff Turkey probably had as ancestors a yellow or buff turkey found in parts of Kentucky, notably Bourbon county, Kentucky, and the northwest, tourists having seen yellow turkeys in Yellowstone Park. The Buff Turkey is not now recognized as a separate variety.

which was held to commemorate the marriage of Charles IX and Elizabeth of Austria. A consignment arriving at St. Malo was immediately dispatched by some zealous local authority to the king's kitchen. This thoughtful action was not in vain. The king, queen-mother, and the Cardinal De Lorraine ate so much, or so many, of the birds—delicately cooked and served on spits—that they were laid down by indigestion during the whole of the following day. Subsequently, King Charles established a turkey-breeding farm on his farm in the forest of St. Germain.

There are three varieties of wild turkeys: The turkey found in the northern states and Canada known as "Meleagris Americana," those found in the southern states and Mexico known as "Meleagris Mexicana," and "Meleagris Ocellata" found in Honduras and Central America and distinguished from the others by the absence of the breasttuft and different caruncullation and a much brighter plumage. The Mexican variety as well as the Ocellata variety is of a brighter color and a smaller bird than the more somber colored and larger birds of the north, ancestors of our bronze variety. The birds Cortez took back to Spain undoubtedly then were the Mexican variety, while those taken later to England by William Strickland were the northern variety. But they had already been named in Spain and the Englishmen most naturally used the same name.

One would at first suppose that the Turks had something to do with the naming of the bird or that the first importants reached Turkey, which at second thought would be preposterous, even if history was obscure in the matter. Some have suggested that it came from a supposed resemblance of the red caruncules of the old Turkish costume of a red fez coming down to the ears, with a dark flowing robe beneath. Another guess is that the word is corrupted from turquoise, supposed to be applied to that bluish caruncule about the head. While some point out that the name of "A Turk" is often applied in popular language to anyone remarkable for domineering and pompous disposition or appearances and thus it became attached to the turkey-cock, and gradually modified. Little weight, however, can be given to these conjectures.

Mr. E. Richardson gives a more plausible theory and one that seems entirely satisfactory and supported by investigation. He states: "Strange, then, how the bird came to be called turkey, a word in no way similar to the Anglo-Saxon pawa, the German pfau, the French paon, or the Latin pavo, all names similar to one another and derived from the Latin, the bird (peacock) having been brought from the east by the Romans. The mystery then is how, in view of all these facts, the name "turkey" came to be applied to this bird. It is obvious then we must look to some other language for the solution to the problem. Going to the far-off home of the peacock we find in the Tamil language of India, a work "toka"—peacock, the primitive meaning of which refers to a train or trailing skirt. This word adopted into the Hebrew language becomes "tukki," and by a slight change of the genius of the English language becomes what we are looking for, "turkey."

But it is asked, "How came it through the Hebrew?" Let it be said then that at the time of the expedition of Cortez to Mexico the despised and persecuted Jews were very numerous in Spain and engaged, as they usually are, by their natural adaptability for gain in merchandising. Their acuteness led them to deal in foreign birds, curiosities and rarities, by which they reaped large profits, as these things were only purchased by the rich. Naturally then they saw in this new importation an opportunity for gain, which they seized, and as they used their own language as much as possible, it was not long before the Hebrew name for peacock became well known. Doubtless they designated it as the "American peacock," for it was well known whence it came. Thus it would be constantly heard in the market places, while the more scientific name of "pavo" would be heard only among the educated few, and so by force of numbers the name was used and anglicized into turkey. Furthermore, the name was formerly spelled "turky," as when Corbet, Bishop of Oxford, writes to Buckingham: " 'Like very poore or conterfeit poore man, who, to preserve their turky or their hen, do offer up themselves.'.

"In tracing the word to the Hebrew, the rules governing etymologies have been complied with, since here we have preserved the radicals T and K, which fact only tends to prove the origin of the word and about the introduction of the turkey into Europe."

Domesticated as it was, one of the first importations of the new world, it still remains, however, a bird of the fields and forests. Another strange fact is that the farther remote our domestic turkey's ancestors are from the wild birds the harder the poults are to raise and the most successful breeders resort quite frequently to introducing wild blood into their flocks of bronze turkeys.

Governor Bradford of Massachusetts linked the turkey with history and national popularity when he proclaimed a day of thanksgiving. He did not tell them what to eat, but wild turkeys being plentiful in the woods, the settlers reasoned rightly that nothing could be more savory than a plump turkey. The idea adopted then has prevailed to this day. It was not until after the Revolutionary War, however, that the feast became national in character, and after 1784 it was only occasionally observed, except in New England.

Wild turkeys travel in flocks or herds numbering as high as 500, choosing mostly the wooded tracts. Their range formerly ex-

This cockerel is an exceptionally well marked bird. Brilliant, sheeny black and white, regular markings, good head and good type although a little too high in tail to meet the standard of Campine tail carriage. Taken altogether he is a worthy second to the extraordinarily fine first prize silver cockerel. Louis Paul Graham. Made from retouched photo.

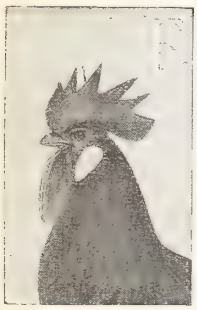
tended over the greater part of North America, including the vast forests of the Atlantic states, and stretching far to the northwest into lower Canada. Southward the bird is found in the Isthmus of Darien, while its range also comprises such variegated country as the Rocky Mountains and the West Indies. The habit of the bird is to congregate in warm, sheltered valleys during the winter in large droves, and then about mid-spring to migrate to the rich uplands where summer feeding is plentiful.

Very few states have any more wild turkeys. A few will be found in Virginia in the swamps and in other more southern states. In some of these states a few breeders breed the wild birds in a semi-wild way to supply domestic flocks with wild blood.

To show how generally common the wild turkey was, one needs only to call attention to the numerous places and locations which took turkey as a part of their name at least. In northern Indiana we had Turkey Lake since changed to Wawasee. Turkey Island, the largest island in the lower Wabash, now Ribeyre's Island, was in the early days a tangled thicket and a favorite covert for the wild turkey. Turkey as a postoffice name will be found in Breathitt county, Kentucky; Sampson county, North Carolina; Hall county, Texas; Wyoming county, West Virginia;

Turkey Creek, Hillsboro county, Florida; Trigg county, Kentucky; St. Landry parish, Louisiana; Turkey Food, Delaware county, Oklahoma, and Turkey River, Clayton county, Iowa.

Oviedo in 1527 probably gave the first description of the turkey and spoke of it as having been taken from Mexico to the West Indies by Spaniards and there bred in domestication.



Shakespeare and other old dramatists make mention of the turkey. "'Tis no matter," says Captain Fluellen, of Ancient Pistol, "'Tis no matter for his swellings nor his turkey-cocks"; and Fabian in "Twelfth Night" says of Malvolio, "Contemplation makes a rare turkey-cock of him." A better remembered passage is that in the first part of "Henry IV," preceding the robbery at Gad's Hill: "God's body," says the first carrier, "the turkeys in my panniers are quite starved."

Benjamin Franklin was a great admirer of the turkey and suggested that it be our national bird instead of the eagle, and this suggestion if put to a vote today would probably carry, so popular has become our national Thanksgiving Day bird.

How to Get A Good Yield of Winter Eggs

Essentials in Encouraging Winter Egg Production—Suggestions Concerning Feeding and Care of Laying Stock

By Prince T. Woods, M. D.

EVERY POULTRY KEEPER is interested in getting a good yield of eggs in fall and winter, when prices are high. Many poultrymen will tell you that the best profits are realized on spring and summer eggs and that winter eggs cost about all (and sometimes more than) you can get for them. That is often true. It costs a good deal more to get eggs in winter than in the spring when any hen, worthy of the name, is in full lay. The non-producing pullets and hens must be fed and cared for and this adds to the cost of the eggs produced by the layers.

Even at a conservative estimate it costs 15 cents a month, or half a cent a day, to feed a hen. Assuming that you have a flock of 200 hens, that means a cost of $1 per day for food alone. The labor and other upkeep won't figure less than 50 cents a day. If you only get one dozen eggs per day from those birds, then the eggs are costing you $1.50 a dozen. If you get three dozen eggs a day, the cost to you is 50 cents a dozen. If you get five dozen eggs a day, which is a pretty good yield for November and December, the eggs cost you 30 cents a dozen to produce. Because a great many poultry keepers do not get a 30 per cent egg yield and sometimes get less than a 20 per cent yield, and perhaps none at all for some weeks, fall and winter eggs are scarce and high. When eggs reach a retail price of 50 to 60 cents a dozen the buying public strenuously complains about high prices and the demand slackens while the buyers turn to cheaper foodstuffs. Yet, five cents each for first quality new-laid eggs is not a high price to pay, when food value and the cost of other foods is considered. Poultry and egg prices need to be revised and boosted upward. Cost of production considered, and compared with the prices of other foodstuffs, poultry meat and eggs sell at altogether too low a figure most of the time. The prices appear arbitrarily fixed, regardless of production cost, and have not climbed upward with the rise in price of other foods. Present day conditions should effect a change for the better.

Obviously, the more eggs one can get from his flock the better his returns will be, and the poultry keeper who can make his flock show a 30 per cent or better yield when eggs are 45 to 60 cents a dozen will make the most profit from his layers. A 30 per cent yield should be obtained under favorable conditions and some poultry keepers have boosted the fall and winter yield to 40 per cent and more. Some preparation is necessary and good feeding and good care are essential.

There is no secret in obtaining winter eggs and no one best ration. Many different plans of feeding will give almost equally good results; the chief requirements are to keep the birds well housed, well cared for and well fed. It is not possible to get a good winter egg yield from birds that are fed only enough food to keep them alive and warm. A maintenance ration is not sufficient. A producing ration is necessary. The birds must have food in sufficient abundance to keep them healthy and happy and provide a surplus, above bodily needs, from which to make eggs. Getting winter eggs, or eggs at any season of the year, is a comparatively simple matter. Good stock, good housing, good care and plenty and a variety of good wholesome food—that's all.

The preparation for a winter egg yield comes early in the season and throughout the summer and early fall. Early hatched pullets are necessary to best results. We want American variety pullets that were hatched between March 15th and April 15th for producing winter eggs. Mediterranean variety pullets hatched not later than May 1st are usually good winter egg producers. From our experience with Asiatics we want the pullets that were hatched between the last week in February and the first of April. Getting the chicks out early is not the whole thing. The early pullets must be kept growing steadily and should be well fed and cared for during all stages of growth.

We like free range grown birds best, and if they are well grown, healthy, vigorous and with hearty appetites, we rather like to have them a bit rangy when first housed. If grown on range with a mostly hard grain ration, we want them to have mash and a laying ration about a month before they begin to lay. When housed they should have liberal yard room if possible and always an abundance of greens. Too abrupt cutting down of the green food, especially with range grown birds, is liable to retard egg production. If greens are scarce, then supply such fresh greens as are available and supplement them with cut clover or cut alfalfa, scalded or dry, and dried beet pulp which has been well scalded to swell and soften it.

Yearlings and two-year-old fowls that moult out nicely before severe cold weather sets in, will, if well selected, prove close seconds to the pullets in winter egg production. Choose hens that get well established in moult early in October and that moult evenly and well. Make sure that they have clear, bright eyes, good red combs free from dark color at the points, good fleshed bodies not deformed by fat, room for two or three fingers between the pelvic bones and that these bones show flexibility and are not fixed immovably and close together. Such specimens should show good appetites, should go to bed with full crops and not hang around the roosts in the day time. When deciding to winter birds make careful selection. It is half the battle and you cannot afford to feed drones.

With some varieties fowls are liable to put on internal fat and cannot stand as heavy feeding as the pullets. Some strains of Plymouth Rocks, Brahmas and Cochins are especially liable to take on internal fat when fed much corn. Where many members of a flock show such tendency it may be controlled by feeding less corn and more greens. Don't forget, though, that a hen must be reasonably fat in order to lay well.

For housing poultry we prefer on open-front type of house and believe the always open houses are much more comfortable for the birds. With birds housed in open-front poultry buildings we have never had any difficulty in getting eggs in severe cold weather and have not noted that cold weather checks egg production. Well-fed birds in an open house do not appear to notice weather changes. We have found that several days of quite warm weather following a severe cold spell sometimes results in a slight falling off in egg yield. Unseasonable weather calls for a little closer attention to the comfort of the flock. Hot weather is more apt to lessen the egg yield than prolonged cold.

In cold, bleak locations we prefer to have layers confined to the poultry house during the winter. In sheltered locations where there is a good windbreak, and where the ground drains readily, it is much better to give the birds an outdoor run. It will do no harm if the birds eat snow; they seem to prefer it to water, and we have never known snow-eating to result

The Show Season and Its Opportunities

The Poultry Show Has Come to Be One of the Biggest Institutions in Our Billion Dollar Industry and is Far-Reaching in Its Scope

By H. E. Nosyt

WITH THE SHOW SEASON just fairly begun, there will follow the usual number of people who for the first time have become interested in poultry to the extent of engaging in the work. This happens every season, but every few years there are an unusually large number of this class of prospective poultry raisers who visit the shows and swell the business of breeders, manufacturers and publishers. If you stand around the booths of any good poultry show, you will soon see the beginner in evidence.

The poultry show has come to be one of the biggest institutions of our billion-dollar industry and probably is more far-reaching in poultry extension work than any other one thing unless it be the poultry press. Nevertheless, the possibilities of poultry shows generally as educational factors have scarcely been touched. Every poultryman in attendance at a show can help the good work along and thereby benefit himself as well as the industry. The show managers are yearly making every effort to institute improved methods of showing, awarding, and generally educating the masses, who throng wherever a really worth while show is being held. But it is largely up to the breeders themselves to create the right sort of enthusiasm and encouragement and to spread broadcast the good effects of conventions, fairs and shows. One of the great drawbacks has been that the people who most need this sort of toning up are the ones who either can't get away, or can't afford to attend, and here is where really true quality extension work should begin. A demonstrator of the right sort could cover a wide territory in helping an unsuccessful man to success in poultry work. A short visit to the farm, a careful survey of the premises, an investigation of the product, and the method of marketing same, would soon determine the extent of the leakage, and a way to stop it. Furthermore, every unsuccessful man would welcome the visitor who could point the way and help him out of his difficulty. If the truth were known, there is not an unsuccessful man in any community that would not be helped by a little encouragement and friendly suggestion as to a better way. Here is a chance to be neighborly and help ourselves by helping others. Do not think your help was unwelcome if the advice was not followed literally. Give the neighbor credit for the ability to improve on your suggestion—but be assured the suggestion will in some wise bear fruit.

A good many poultrymen have not come to realize it but the beginner in poultry work is a very good individual to know and a very good man to whom to give a square deal. Nine times out of ten the beginner comes back with further orders where he has received good treatment, but he does more than this, he becomes a first class advertising medium, in that he tells his friends that John Smith of Wyandotte or Plymouth Rock or Orpington fame fills an order exactly as ordered, his eggs for hatching are carefully selected and well packed, his breeding stock is healthy and true to description as sold. A satisfied customer is a worth while asset to any poultryman. The day has passed, if it ever really existed, when a breeder can afford to sell scrubs and deformed specimens to beginners simply because they do not at the time being recognize true poultry values. A business deal should profit both buyer and seller, and in such cases is bound to create bigger and better business generally.

In going about to the shows in recent years, I have come to realize that an opportunity for educating visitors as to the numerous varieties of poultry is lost sight of by not labeling the coops individually as to the variety they contain. At the Madison Square Garden show last winter, Mr. Cleveland took a step forward in this matter by using a printed card bearing the name of the variety at the beginning of each section wherein that variety was cooped. And many were the complimentary remarks in praise of this. Heretofore, I have frequently seen an occasional placard naming a variety here and there, but Mr. Cleveland's was the first systematic innovation I have noticed along this line. For the slight additional expense, it would be well worth the cost to have over each coop the name of the variety within. Standing about in the aisles in any show, one is frequently asked by curious minded visitors, interested beginners, and sometimes, by established breeders, as to what breed a certain specimen belongs. Of course, there are the catalogues, but if we really wish to create or foster an interest in the numerous varieties of thoroughbred poultry we want to give the visitors, including the boys and girls, every opportunity after having paid their admission.

The moving picture, everywhere in evidence, having made its appearance in poultry work will without doubt greatly increase the interest in poultry shows within the next few years. Here the field along educational lines is so broad that the film makers will be kept busy providing reels of good live interest, depicting the best known methods of poultry production. Every big show should have its moving picture demonstration with a variety of reels covering all branches of the industry. The usual lecture is a valuable adjunct but the moving picture demonstration alone, or in conjunction with the lecture, must eventually supersede it. The facts are more effectually brought out when thrown on the screen where the eye can take it in, and the impression is there to stay.

Novice classes are well worth while as are also utility and market classes. At one of the shows last season where a display pen of utility birds were on exhibition, a continuous crowd of visitors stood about watching the busy, happy flock within. The occasional deposit of an egg in the next box called forth all manner of praise by the onlookers.

For agricultural fairs, through many sections of the country, reduced rates are secured on railways to and from the fair town or city, within a certain radius of miles. Such tickets are sold, including admission to the show. A similar arrangement could undoubtedly be brought about in connection with poultry shows and would help to bring farmers and small breeders to exhibitions, since in most instances these constitute the greater number of poultry raisers who stand in need of the enthusiasm and new ideas which the successful poultry show is bound to dispense. The man who has not had an opportunity to get out and see what those more successful in his line have accomplished, seldom greatly increases his output. More frequently at each little discouragement he loses interest in the work and gradually becoming disheartened, drops out. Most humans, unfortunately, become frequently depressed at very little things and are overcome with the appalling littleness of the results of their efforts. We need the encouragement of successful people. We want to learn of the clever ideas that other minds have brought about and give ourselves a basis upon which to work out, during the long winter evenings, our own success. A good, well-conducted poultry show will set a lot of minds to work upon this interesting, worth while problem. Herein is where the really successful poultry show can do its most far-reaching work—by giving the visitors ideas of worth to carry home with them; by enlisting their thoughts in matters pertaining to poultry keeping and production. The man, woman or child visitor wandering half-interestedly through the show room could easily become convinced of the necessity of sanitation as regards table eggs by means of well-selected motion picture reels. And the same plan could be used successfully as regards the immense amount of "mortified" dressed poultry offered for sale in public markets. The general public need to know what first quality live poultry, dressed poultry, and table eggs are, and the poultry show is the best place, to date, to show them. Motion picture demonstrations will solve the problem better than displays of the articles in question.

The American poultryman is today facing the greatest era of prosperity the industry has ever known. Within our confines plenty abounds, the largest crops on record have been harvested and we have before us opportunities such as has never been known by any nation since the world began. With practically all other great nations intent on slaughtering their brethren, trampling their harvests, consuming their herds and flocks, here in the new world, amid peace and plenty, has not the appointed time arrived in which to lend needed encouragement and stimulus, in the form of any and all acknowledged educational advantage to those who would benefit thereby, making of the poultry industry the greatest, most efficiently managed and generally followed business of the twentieth century?

The Uses and Abuses of Poultry Manure

Good Fertilizer for Garden Truck When Properly Preserved—Annual Yield is About Thirty Cents Worth Per Hen

By Walter C. Hunter

THERE seems to exist a general prejudice against the use of poultry manure. It is a common thing to see people owning forty to fifty fowls buying cattle manure at $2 a load for their gardens, and considering their poultry droppings as of little or no value.

Many have used it with disastrous results, due to a lack of knowledge about its proper application, or of its proper preservation and storage. As a matter of fact, poultry manure is a by-product of poultry keeping which has a saleable value, but, as is the case in all businesses that are small, few recognize that the by-products can be made substantial means of producing revenue.

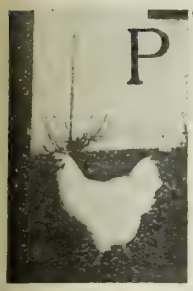
Poultry manure is one of the best of manures if properly preserved. It is rich in nitrogen (sometimes called ammonia), and nitrogen is the most expensive element used to make the compound known as commercial fertilizer. In this respect, droppings are the most valuable of farm manures. Their greatest deficiency is lack of potash. That, however, can be applied separately, in proportion as the particular crop needs, much or little of it. When the droppings are allowed to remain unmixed with other substances, from one-third to one-half of this nitrogen evaporates in the form of an ammonia gas. The mixture of certain materials with droppings serves to preserve this nitrogen and, in addition, give the manure greater balance, as in separate form, the proportion of nitrogen is so large as to be wasteful.

Many who do not use dropping boards allow the manure to accumulate under the roosts and shovel it out once a year. If nothing is added, it becomes a solid, sticky mass and is hardly applicable while in that condition. Moreover, the mere act of cleaning out the house will raise such a stench that the neighbors will likely call out either the Board of Health or the reserves.

The first necessity is a proper place for storage. Any receptacle which will keep it dry will do, but a concrete bin properly covered, or something of that order, is almost a necessity on an up-to-date poultry plant. Any structure of wood will soon rot out when continually exposed to dampness. The construction of a cement base means a permanent place for compost, one that allows no chance for leaching

The methods of preservation are variable; something depends on what crop the manure is to be used for, but it is not necessary to go to any great expense to effect this purpose. The most common and cheapest method is to apply land plaster, also called gypsum. Some people think that land plaster and lime are like substances, which is not true. Moreover, the addition of lime will cause the very thing you are trying to prevent: the evaporation of the ammonia. Land plaster by itself is something of a fertilizer. It possesses the property of attracting and retaining moisture; hence it is most valuable on dry soils. A good mixture is half land plaster and half droppings, although only as much land plaster is strictly necessary as will make the manure appear white. Each time, after cleaning the droppings boards, sprinkle the boards with it. In scraping off the platform, the plaster will mix and adhere to the droppings. The manure should be stored in a cool, dry place. If at any time it develops an ammonia smell more plaster should be applied.

Another way is to apply acid phosphate and kainit, which also prevent the escape of the nitrogen. The addition of sawdust, dry loam or peat will make a balanced fertilizer which can be readily handled. It is best mixed in the proportion of fifteen pounds of hen manure, five pounds of sawdust, eight pounds of acid phosphate, and four pounds of kainit. Such a mixture has a value of about $10 a ton. It cannot be applied in drills, though it works very well with a manure-spreader. Woods and Barlett in an experiment involving seven different tests say that the absorbent used should be one of little expense as the soluble plant food added by any of the three ingredients just previously mentioned is negligible. Their principal value is as dryers and preservatives. Either one of the three will generally be found to be inexpensive. The first few times these elements are added it is best to weigh them. After that they can be measured with the eye. The droppings should be treated each day and the kainit and acid phosphate kept ready to hand for the purpose. They estimate the value of a year's droppings from 1,000 fowls at $300, though this estimate is too variable to be figured as positive by anyone about to start in the poultry business



Poultry manure is quick acting; hence it is best for garden truck. It is best applied in the proportion of one part manure to two parts soil and not to be allowed to come into contact with a plant's roots. Some claim that it is good for all crops; the fact is, that it is ahead of any commercial fertilizer for some crops and better than nothing at all for others. Nitrogen is the substance which makes wood or stalks rather than fruit. When used for beans or peas its tendency is to grow very unusual vines with small pods on them. It is excellent for tomatoes. Some of the best corn I have ever seen was raised with hen manure as its only fertilizer. In working it into the hill, care should be exercised so as to not let it touch the roots which its richness will kill. For lettuce nothing is better and greater latitude of application is allowed. Lettuce needs all the nitrogen it can get. Scatter the manure along between the rows but do not get it close to the plants. I believe it specially good for rhubarb, also, judging from the results I attained last season. It apparently gives good results with grapes. For flowering plants it effects great growth of stalk with little resultant blossom. Last fall (September 25) I noticed some calla lilies which were more than seven feet tall. They just had commenced to blossom, but it was too late in the season to put forth much flower. The hen manure, with which they had been liberally supplied, had so stimulated growth all summer that there was none of the growing season left for blossoming. However, it is unlikely that these callas would have blossomed much after such a weedy growth. This illustrates the result of lack of balance in poultry manure.

There is a good opportunity for some genius to experiment with poultry manure with the idea of making it more available as a commercial product. I know of a case where a poultryman mixed it with chemicals, put it up in packages, and sold it as fertilizer for house plants, clearing nearly $100 as result of one year's operations. This gives some idea of how by-products can be made sources of considerable profit. Large industries like the packers, the United States Steel Corporation, and others are continually spending thousands of dollars experimenting how to utilize substances which are at present waste products of their business. And it pays them to do so. Poultry manure is of special value to truck gardeners. I believe it feasible to go to one such and to agree to preserve the manure as he may stipulate, provided he agrees to purchase it, adding whatever preservatives he may wish.

Egg Prospects and the European War

Timely Comment of Interest to American Poultrymen—Increased Demand and Better Prices for U. S. Laid Eggs

By Prof. J. C. Graham, Mass. Agricultural College

POULTRY KEEPERS have a habit of disposing of all the hens and pullets they can possibly spare whenever feed gets very much beyond the normal price, but conditions are such this year that we believe it will pay to keep all females that have a semblance of good laying qualities, irrespective of the cost of feed. I do not mean by this that extremely old hens or worthless pullets should be retained.

It is a well known fact that England depends largely upon continental Europe and some of her colonies for her egg supply, and as the poultry business is ruined in Belgium and large portions of France, Germany, Austria and Russia and the price of eggs in Holland, Denmark, Norway and Sweden is beyond the reach of ordinary people, her egg supply will be cut very short, in fact all continental Europe will suffer in this respect, unless it is Russia. This is to be greatly deplored, as large quantities of eggs will be needed for hospitals and convalescent soldiers.

The importation of eggs in the month of December, 1913, amounted to 1,514,296 dozen, or more than in the entire fiscal year which ended in June, 1913. This shows that foreign countries have their eyes on the United States as a place for their surplus egg supply, especially during the winter months. The fact that shipping has been more or less demoralized and these importations cut off leads us to believe that the price of eggs will be very high, not only this coming winter but for next season also and possibly for two or three years to come, because it will take considerable time for those countries to get their poultry work back to normal conditions. Furthermore, it will be greatly to our advantage, as well as to the consumers here, to habituate the public to the use of our own products rather than those of foreign countries.

The following extracts from "Poultry," an important English poultry journal, show the general trend of thought in that country, and also that the English are making every effort to increase the supply of eggs and poultry:

Resolution Passed by Poultry Club Council held at Oxford Court, E. C., August 14, 1914.

"That this Council appeals to all patriotic poultry-keepers, whether concerned in the production of table fowls or fancy birds, to support their country by continuing their normal course of business; and especially by retaining all useful stock birds with a view to increasing the nation's supply of fowls and eggs for food.

"That the fullest publicity be given to this resolution."

Resolution Passed by Sussex Poultry Club held at Lewes, Sussex County, England, August 14, 1914.

"That this club suggest to poultry breeders that all pullets should be saved for egg production and that selection be made later from such birds for the breeding of table chickens, the "Sussex" being especially useful for this purpose, it being a good winter egg producer; and as it appears that many of the shows will be cancelled the stock should be used for increasing the number of chickens next spring. With regard to feeding stuffs, it is anticipated that the prices will not materially increase, and whatever it might be, the price of poultry and eggs would more than compensate the breeder for the outlay and trouble involved. It is to be hoped that every poultry-keeper in the country will do his best to keep up the supply and increase it if possible."

"Business as Usual"—By a Special Contributor.

"'Business as usual' is the country's motto today, and it makes one proud of that fact that he is a Britisher to note the calm and workmanlike spirit which characterizes our people during this period of stress. In the world of poultrydom particularly we can go about our daily duties with quiet confidence.

"The threatened 'famine' prices of foodstuffs have not materialized. Poultry foods are quoted at an average increase of about $10.00 per ton, which means that when fed on the BEST foods only, each bird will cost 1½c per month more than ordinarily. I put it to the thinking poultry-keeper that the increased price of poultry and eggs, consequent upon the increased demand for these commodities, will easily bring his additional returns on a level with his additional expenditure, if not indeed considerably above it. I contend that the suggestion to put fowls on short rations, or to utilize inferior feeding material, are idiotic in the extreme. The sane man will continue to feed his birds generously and well, with the object of getting the highest possible results from them. He will indeed, if he be wise, pay special attention to his poultry at this time, for we are now presented with the greatest opportunity that has ever been offered to us. The decrease in foreign poultry imports will bring the home product prominently before the purchasing public."

We have it from good authority that the poultrymen of Canada are being urged in the same way to do their utmost to meet the demands that will be made upon them by the mother country for this important product. Why should not the poultry-raisers of the United States take advantage of this crisis, and not only help to make up the deficit in European markets and decrease the high cost of living at home, as well, but add materially to their own profits? This can be done by carefully observing the following:

"PRINCE CHARMING."
Special prize Indianapolis, 1914. "The nearest approach to an ideal Leghorn head." The Willows Farm, South Bend, Ind.

1. Keep over this year for layers all hens and pullets that will help to fill the egg basket.
2. Market, as soon as in condition, all worthless females and undesirable males.
3. Plan to raise a good supply of chicks next spring from the very best stock you have.
4. Because feed is high, do not think for a moment that good results can be obtained from underfeeding.
5. Feed your poultry well on good wholesome feed, but see that there is no waste.
6. Our common grains are the best feeds for poultry.
7. If mangels, beets, turnips, etc., can be purchased at a reasonable price they will not only decrease the grain bill but will add materially to the health of the fowls.

EDITORIAL

10 cents a copy of all newsdealers.
Canada, 1 year, $1.25; 3 years, $2.75.
Foreign, 1 year, $1.50; 3 years, $3.50.

Look at the address on your wrapper. See that it is absolutely correct and notify us of any mistake, no matter how slight. Note the expiration date which appears thereon, as American Poultry Journal stops with the issue marked on your wrapper.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

What About the Future?

QUITE a number of our poultrymen friends ask: "What about the future? We have experienced three rather lean years; how will this war in Europe affect our business?"

We don't believe in worrying about the future. The future will be what we make it and will take care of itself. The past *has been* and can't be helped now. The *present* is with us and we can make the most of it.

While no one can predict what the outcome or the ultimate results of the war will be, we cannot see how the position of being the only big neutral world power can fail to bring us great opportunities for improvement of our own natural resources and the development of great business prosperity. It is not a time for hesitation and worry. It is time to get busy, to begin a sane and vigorous advertising campaign right now, and to get out and hustle for more and better business. It is a time to develop producing plants, increase capacity, improve and increase the output, and to make a business of making sales.

No one can hope to get business by sitting down and waiting for it to fall in his lap, or by fretting and worry over what has been or may be. *What is* and an ambition to get out and get all of your share of *what can be won* in the future, if you work for it, is what counts. Push, pluck, optimism and hard work will make and get business. In the poultry business a good start and an early start count big in winning success. It is not necessary or wise to plunge or to go in headlong and blindly, neither is it wise to be too conservative and to hesitate too long. While you hesitate some competitor may pick the fruit or reap the harvest. You can't plant an ad today and reap big business tomorrow. It takes persistent, consistent and continuous good advertising to win and hold business. A little spasmodic effort and a little splurge won't carry you far, but a good, vigorous, well-planned, keeping-everlastingly-at-it campaign is bound to bring in good returns.

If the war ends soon, we believe it will be a good year for poultry interests. If the war continues and proves as long drawn out an affair as now seems probable, we believe that conditions will be even more favorable for American poultry interests. Prosperity is headed our way and the opportunity is at hand, we don't see how anything short of monumental national folly can prevent us from doing good business. When we say don't plunge, we mean don't attempt more business than you can attend to well and thoroughly. Plan to winter all the breeding stock you can handle to advantage and take good care of. Don't attempt to carry more than you can house and feed well. Breeding and laying stock must be kept well fed to make them productive, there is no profit in keeping birds and feeding only just enough to keep them alive. Plan, in the chick season, to grow all the young stock that you can develop properly. Get out now and hustle to sell your surplus stock birds and begin a campaign for the sale of hatching eggs. Give your advertising abundant time to draw, keep piling up more good selling arguments on top of it. Don't let the buying public have a chance to forget you. Publicity counts. In this great and growing country, with its wide range of climates, the poultry business ought to be an all-the-year-around business, not a one-short-season business. It is only a one season business because the breeders make it so. Some enterprising day-old chick men have found that the day-old chick business is an all-the-year-'round business and they are making money at it. Selling breeding stock is an all the year around business. Eggs for hatching can be sold to advantage at least ten months in the year and under favorable conditions the year round. There is a big and growing demand for early eggs that will hatch. Summer eggs that will hatch good chicks can find a ready market. If you have good goods of the right sort there is a demand that can be supplied twelve months in the year. Opportunity is knocking for both fancier and utility man. Go after the business right, work it like any other legitimate business and try to keep customers coming back for more. It is a good time to forget the "hen fever" methods and inflated values of the "good old days" and to reach out after sane, safe, solid and substantial business.

To return to the war,—don't worry! There will be plenty of people left in Europe when the shooting is over. According to statistics the population of Europe nearly doubled in forty years of peace and in Germany there were over 300 persons per square mile when the war broke out; England had a population of 618 people per square mile in 1911; France, 189 persons per square mile, and Belgium's population averaged about 667 people to the square mile. The total population of Europe in 1912 was 454,600,000 people. These people must be fed and clothed and European resources, which were not sufficient in times of peace, will not suffice in war time when European business is, much of it, standing still.

No one can tell what effect the war will have on the producing and consuming power of Europe. National boundaries may change, but Europe must remain densely populated and devoted chiefly to manufacturing. It will export manufactures and import foodstuffs and raw materials. The continents of North and South America will very largely supply the needs of Europe. The United States should get a very large share of this business, as well as a big share of the commerce with other parts of the world that now

needs developing. American producers and a substantial American merchant marine should take advantage of this great opportunity opening for world business. We once had one of the most far reaching and prosperous merchant marines in the world and American ships were leaders in all world ports. We lost it through internal strife in the Civil War and European ships took our place on the high seas. Now, with all Europe in the throes of internal strife, we have an opportunity to win back the sea trade we lost and in greater measure. What we all need to do is to *get busy!*

Europe has for many years done a big business in the production of poultry and eggs and in dealing with eggs from the Orient for export to all parts of the world. Much poultry has undoubtedly been sacrificed during the war, production must be at a standstill, and there is little likelihood of Europe being a producing and selling factor in the poultry and eggs market for some time to come. Havoc has been wrought in many fanciers' flocks and much damage done to breeds of poultry. There is immediate opportunity for exporting market poultry and eggs and when the strife is over there should be a considerable and increasing demand for American Standard-bred fowl to restock European poultry yards. Meanwhile, we have a big market for breeding stock open and awaiting development in South America.

Get busy and strive to get your share of bigger, better business!

Day-Old Chicks.

IT may seem a bit early, or late, to write about day-old chicks, but it only *seems* that way, for the subject really is very seasonable. If one plans to do a business in day-old chicks the coming season, it is time *now* to prepare for it. There is opportunity right now to take orders for day-old chicks for immediate and for future delivery. Several hatcheries are selling chicks by hundreds and thousands this fall. One custom hatchery, we know of, began shipping chicks last January and intended to stop hatching in June to devote the months of July and August to getting ready for the next season. Customers desiring chicks for August and September delivery simply could not be refused and special order hatches have been made right through the year thus far.

Anyone sufficiently expert in incubation to hatch strong, livable chicks has an opportunity to do well with day-old chicks. One does not necessarily have to have a mammoth incubator, though such are desirable for large hatcheries, and several commercial hatcheries use the 300 and 400-egg individual, lamp-heated incubators. Several poultrymen we know, having only from three to eight small incubators, do a profitable business in day-old chicks. The prices obtained for chicks range from $10 to $25 per hundred. Fanciers who get long prices for hatching eggs have obtained two dollars each for chicks hatched from $10 sittings. Many buyers would prefer to buy day-old chicks at twice the price they would have to pay for the eggs for hatching.

If one has incubating equipment, it is a good time now to overhaul same and make sure that it is all in good working order and in readiness for the season's work. If one needs more incubators, *now* is the time to buy Manufacturers can handle your orders more promptly and to better advantage now than in the rush of the busy season later on. By buying now you can get prompt delivery and will have your machines when most needed and everything in readiness for early hatches. Do your buying early. Get your incubating plant ready for business and have all brooding equipment ready to receive chicks. There is ample time to do the work *now* and to do it well—later on you will have to hustle, and be sorry for it, if you put off the work. There is usually a market for day-old chicks at all the big poultry shows.

One does not necessarily have to operate incubators to do a business in day-old chicks. There is a good market for hen-hatched chickens, the brood sold hen and all. Hen-hatched chicks sold with the mother hen bring good prices, seldom less than 25 cents each for the chicks and $2 for the brood hen, and often more.

The essential thing is to have the eggs for hatching out of strong, vigorous, healthy stock and the chicks well hatched. Chicks that will live are in demand at the producer's prices. One R. I. Red breeder told us that he sold all the chicks he could hatch, beyond home needs, at 20 cents each and guaranteed 85 per cent of them to live if brooded and fed according to his recommendation. He did not have one complaint, though his complaints from eggs sold for hatching during other seasons had been troublesome.

Why not try to get a share of the profits to be made from sale of day-old chicks?

Develop a Parcel Post Trade.

MR. UTILITY POULTRYMAN, it is up to you to get out and hustle for business. With the aid of the parcel post you can sell your new laid eggs, dressed chickens and fowl direct to the consumer anywhere within 100 miles of your plant. You can pay for packing and postage and net a better return for your product than you can by selling through a dealer, and the consumer will get better goods, fresh from the farm, at no greater price than she now pays for the stale and much-handled goods the grocer offers.

Egg buyers who ship to market buy eggs and poultry as cheaply as they can. Their chief object is to get the buying price down and to sell for as much profit as possible. They collect small lots everywhere and the consumer gets a mixed lot of produce of doubtful age and varying quality and pays new goods prices.

Selling to the collectors and the "hen men" is poor business for the poultrymen. The only use a really live poultryman has for the rural collector of poultry and eggs is to sell to him such poultry and eggs as are not of sufficiently good quality to sell direct to consumers of first-class goods.

On October 8th the local groceryman was paying 40 cents a dozen *in trade* for fresh eggs; a nearby poultryman selling to private trade was paying 46 cents a dozen *cash* for eggs to sell again; the price of eggs in a city 30 miles away was 56 cents a dozen at retail. City customers were glad to pay 56 cents a dozen for new laid eggs delivered direct by parcel post from the poultry farm. The extra cents per dozen are worth working for.

Madam Housewife, you admit that you never can buy eggs from your grocer that taste as good or prove as satisfactory as the new laid eggs you had when you visited the farm. There is a reason. The "fresh eggs" you buy from your grocer are seldom really fresh eggs. They are "selected" eggs from various sources and of different ages, culled from large lots shipped in by collectors and country grocery stores. Such "store eggs" can't compare with eggs produced on an up-to-date poultry farm, where the hens are fed well on the best of wholesome egg-producing food. The poultryman can deliver to you the best quality new laid eggs, shipped on the same day they are laid and ready to grace your table before the new laid "bloom" is off the shell. Every egg is not a first quality food egg simply because it is labeled "fresh." Every egg you buy direct from the poultryman will be guaranteed in quality and freshness, the best food eggs produced. Hospitals and first-class hotels pay higher prices for new laid eggs direct from the poultry farm, because they require the best quality eggs in their business, and they cannot afford to take chances with the ordinary eggs of the market. You, Madam Housewife, should not take chances with the food you supply your family; you need, pay for, and should get the very best food quality obtainable. The way to get the best food quality in poultry and eggs is to buy your supplies direct from the poultry farmer. It is true that you will be required to send cash with your order, but you need not be in the least afraid to send the money in advance. There are practically no cases of fraud; poultrymen as a class are honest and can be relied upon to deliver the goods.

In buying or selling eggs by parcel post the orders should not be too small. It is better economy to have at least four dozen eggs in one shipment. The heaviest cost for packing and postage is in the first pound, and it costs very little more to deliver four dozen eggs than one. In packing eggs for parcel post shipment a common "split" market basket with handle is the best. Make a bed of excelsior in the bottom of basket, wrap each egg in excelsior, and cover with a pad of excelsior and cover of clean, cheap, cotton cloth tucked firmly into rim of basket. Use a printed label marked "EGGS—HANDLE WITH CARE," and be sure to have farm name and address on your labels and shipping tags. Do not include any writing with the shipment.

Dressed poultry, if starved 36 hours before killing, dry picked, properly chilled and dried, will go safely by parcel post. When chickens of roasting size were only bringing 14 cents a pound alive at the door, sold to the collector, one of our neighbors sold his surplus birds, dressed, at 28 cents a pound to city customers. One cannot afford to sacrifice birds at 14 cents a pound. It costs that or more to produce them. The extra 14 cents a pound is worth working for. It only costs 5 cents each, or less, to have chickens dry picked by an expert and the shrinkage in weight from loss of blood and feathers is small.

It requires a little hard work and push to establish a city parcel post trade, but it is worth the effort. Oftentimes the postmaster can put you in touch with prospective buyers. City friends and acquaintances can be of

great assistance. Advertising in the city newspapers is apt to prove disappointing, but properly handled will bring business—though it is for the large producer rather than for the small plant poultryman. The best proposition is to get directly in touch with one or more consumers through business friends. One city consumer we know of began by taking home a few eggs from the farm on returning from a brief visit. Then she sent for 15 dozen and distributed them among friends and neighbors. In a short time she was having two half-cases, of 15 dozen each, delivered each week, chiefly to be used by several families in the same apartment house. These buyers told others about the fine eggs "that taste different from store eggs," and other families began to club together to get regular shipments. Then came requests for dressed poultry and the poultry plant, that made its start in city business by presenting a visitor with two dozen eggs, is now sending all of its best output to private city trade, dealing direct with the consumer and mainly by parcel post.

City dwellers everywhere can get the best of fresh farm products delivered direct from the farm by parcel post. The service is improving. Here is a big opportunity for consumers to buy good goods at fair prices and a still greater opportunity for poultrymen to establish an independent business, get better returns and do away with the losses which result through many handlings by middlemen, each of whom gets his profit on your goods.

NOW is a good time to begin the development of a parcel post poultry and egg business. "Direct from nearby farm" should have a meaning for consumers who pay fall and winter prices. Customers take a greater interest in quality when the price is high and going up.

United States Citizens and the Farms.

THOSE of us whose ancestors immigrated to this country early in the seventeenth century and who had forebears in the war of the American Revolution, are disposed to feel quite a little wholesome pride in belonging to "the old American families." Yet, the few years and the few generations between ourselves and our immigrant ancestors do not make us any better citizens of the United States of America than people of foreign birth who have been naturalized. The worth is in the man, not in the accident of birth;—though good blood lines, good breeding and the introduction of new blood, count for much with folk as do the same conditions with lower animals.

Many farm seekers express a desire to get into "a fine old American neighborhood." That is a difficult proposition at the present time. When one really does find a rural district where the "old families" predominate, the stock is apt to prove pretty well run out through intermarriage (inbreeding) and the newly arrived home seeker is apt to be disappointed. There is seldom anything more discouraging than a too closely inbred rural community. Some farm seekers complain that most available farms and country homes are "in a foreign neighborhood." We don't see how that can be avoided and oftentimes the "foreign neighbor" proves more desirable than "natives." Good neighborhoods without "a fly in the ointment" are exceedingly scarce in city or country, and the best we can hope for is a home-like home place where, in living conditions, the good features overbalance the bad.

According to *The National Geographic Magazine*: "Five million two hundred and fifty thousand persons came to the United States to make a permanent home during the ten years 1900-1910" and it is further shown that: "We have one-sixth as many Canadians as there are in Canada" (a large number of these are Canadian French) "and one half million more Germans than the city of Berlin; enough Irish to make four Dublins, and enough Italians to make three Romes."

Even among the poorer class of foreign-born citizens the development in two or three generations into prosperous and patriotic Americans is really amazing. It is shown by statistics that one person in every seven in these United States was born outside the border and that over one-third of all the people in the United States are foreign born or have one or two parents who were foreign born.

From these facts, farm seekers will see that they cannot afford to be too fussy about "foreign neighbors." The oldtime rural communities of all "old American families" must be pretty nearly a thing of the past, or, if they can be found, may not prove desirable to live in. It must be borne in mind that only about two persons in every three in the United States can claim the distinction of belonging to an "old family" having two or more generations of citizenship.

It might be just as well to remember that we are all citizens of the United States of America. All striving to better ourselves and the conditions under which we live. We have to accept conditions as we find them, but we can all strive for improvement and better understanding. This is a great and powerful country with sufficient resources to sustain itself and to remain at peace. You can take pride in your United States citizenship, be it newly acquired or inherited from a long line of ancestors. You have your own share of responsibilities and your own share of the world's work to do. Get on the job and forget the petty things in striving to do your best in the broader and bigger things of life. A united people, with one country, one flag, with ambition for improvement and success, will win progress and prosperity—while nations divided by racial hatreds and bickerings fall by the wayside.

Be a Citizen of the United States and all that the title stands for. Opportunity and Prosperity are knocking at our doors.

What's Your Name?

HOW few people breeding poultry have ever stopped to figure the vast number of people who are raising poultry. Just stop and count the ones in your city alone—wonderful, isn't it?

Well, it struck us that way and we decided what a great idea it would be to have the 1915 Year Book contain the name of every man and woman in the United States and Canada who raises chickens, ducks or turkeys.

Now, before you forget it write us at once for further information. Address your letter to Managing Editor, 1915 Year Book.

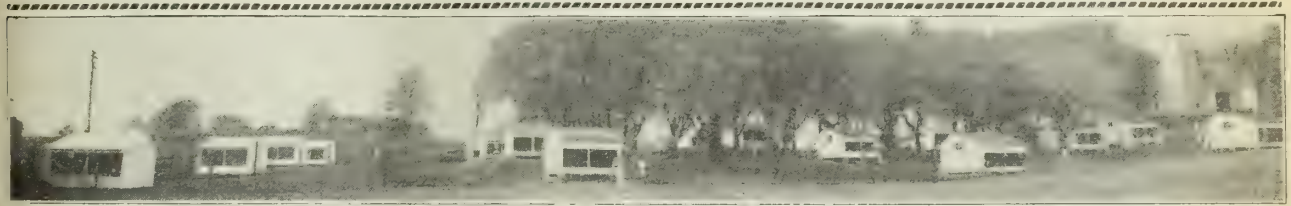
Is It Necessary to Retouch Photographs of Prize Winning Fowls?

DURING the last two seasons we have received numerous requests from well-known breeders all over the country to do as little retouching as possible on the photos of their birds; in many cases we have received orders to run the pictures absolutely unretouched. In our January and February issues we showed quite a few pictures of this kind which had not been retouched and which showed the specimens absolutely as they appeared in the fanciers' yards.

An agitation among America's foremost breeders has sprung up during the last three or four months to do away entirely with the retouching of photographs. In fact, our foremost breeders such as A. E. Martz, of Arcadia, Ind.; Chas. V. Keeler, Winamac, Ind.; Eugene C. Smith, Aurora, Ill.; H. W. Halbach, of Waterford, Wis., and many others have said that they would not use retouched pictures in the future.

Now, the question is, is it right to retouch photographs and run them in the poultry papers, representing them as specimens that won at certain shows? We say, no! The breeder who can produce superior specimens, able to win at the large shows, should show his birds in an absolutely natural condition and receive the proper credit for producing such a high-grade bird.

As it has been up to the present time, almost any old photograph of a bird could be idealized so it would resemble exactly the first prize winners at Madison Square Garden, Chicago or other big shows, and the advertising influence created by such a picture was illegitimate and downright "flim-flamming" the public. We do not want to go on record as saying that the shape of every prize-winning bird shown heretofore has been altered to such an extent as to destroy the entire outlines of the bird, although in a few cases we know it has been done.



It is a very difficult proposition to photograph a fowl and show its type to best advantage. It can be done, however, if the artist is given sufficient time. Too many breeders have a cut made from a photograph that is absolutely an imposition on the bird. Just because they know the bird is good and is the first prize winner they snap a picture of the bird in any old position and have an engraving made from same and run it in some poultry paper. At the same show another breeder wins in the same variety and class and sends in a first-class picture to the same paper to have a cut made. As it happens these two pictures are run in the same issue and the reflection on the ability of the judges alone which these pictures cause and the advertising value which the owner of the poor picture loses should cause poultry papers to absolutely refuse to run pictures that do not show the type of the bird to best advantage.

In this issue of the American Poultry Journal we show a number of absolutely unretouched pictures of birds which are a credit to the breeder's skill, and if at this time of the year we can make such pictures, we are certain that we can make better ones during the show season, when the birds are in perfect condition and are trained and handled.

It has been said that it is impossible to show penciled and partridge varieties and do justice to the fine markings, for the reason that red and black photograph very similar. We are willing to disprove this statement and show in this issue a picture of a triple laced Partridge Rock female which shows every marking and without having been retouched. Of course, the artist who makes a specialty of photographing poultry is handicapped to a certain extent. He is working under unnatural

MARTIN'S REGALS

Crusader III, a Boston Winner

Have opened the season by making a wonderful winning at the New York State Fair. Competition was keener than ever, but the result was the same. At three of the largest early shows in America, the names of which I am not at liberty to mention, birds I furnished made splendid winnings for my customers. The following letters which I have permission to use are just a sample of the letters I am receiving from day to day. Regal White Wyandottes have surely established their right to supremacy:

Poughkeepsie, N. Y., September 13, 1914.

At the fair last week my birds won the following prizes: 1st and 2d cock, 1st and 3d hen, 1st, 2d and 3d cockerel, 1st pullet, 1st pen (old), 1st and 2d pen (young). Judge Drevenstedt said my birds were a grand lot, in fact, first cockerel and first pullet wonders. My exhibit was a great advertisement for the "Regals" as I had a sign on every coop "Regal Strain." Thanking you for past favors, I remain,

Yours truly, E. B. UNDERHILL.

Hanover, Pa., September 21, 1914.

I wish to thank you for the high quality birds you sent me. I am more than pleased and I surely got my money's worth. I won 1st cockerel, 1st, 2d, 3d and 4th pullets; also 1st young pen and special for best display of White Wyandottes. Thanking you for such quality, I remain Yours truly,

FRANK P. ALTLAND.

Free—Twenty-page illustrated catalogue and sale list.

John S. Martin, Box 51, Port Dover, Canada

lighting conditions at many of the shows and the few hours of good light which are at his disposal are soon gone and he is continually working under a high tension. We believe that if the birds were sent direct to the artist's studio that far better results can be obtained, as he can develop his negatives on the spot and make as many as are necessary to produce the most perfect results.

The American Poultry Journal, as usual, is the pioneer in this field and living up to its motto, "We Lead, Others Follow," has always advocated the use of unretouched pictures, believing that the skillful breeder should have full credit for his work. Beginning in the January issue, every picture that has been retouched will bear the legend, "Cut made from retouched photograph," and every unretouched picture will be labeled "Cut made from absolutely unretouched photograph."

We ask you once more to look at the photographs in this issue and we are certain that you will agree with us that our standpoint in this matter is correct.

o

Give Us Your Ideas.

AS a reader of the American Poultry Journal you are well aware of the success of the second annual edition of the American Poultry Year Book.

At this writing our staff is working day and night, sparing neither time nor money to go a step farther and make the "1915 Year Book" the Peer of all Poultry Literature.

Just a word about the new features: There will be photos of the people who have helped to make this "Billion Dollar Industry," and we want yours among them. Then comes the women's section—ideas for the house—what other wives have done with poultry—all that sort of thing that interests a woman. How to be a successful breeder—this story you will want to save for your leisure moments, for once you start it you won't want to be disturbed. These are just a couple of the odd fifty new articles which you will find in the 1915 Year Book.

The feature sections will be written by the foremost poultry authorities of the country—each and every article being as new as a "crisp ten dollar bill."

Of course, there will be the regular poultry news, show and fair reports—reports of experimental stations—egg-laying contests—diseases—how to prevent and cure—the building of poultry houses—the rear lot breeder, and hundreds of other articles. By the way, another new feature that will interest you, the Year Book will contain a complete parcel post table of rates, showing cost of shipping to any and all points in the United States and Canada. In fact, if you wrote it yourself you couldn't be better suited.

Yet we feel that among our thousands of readers there are a number who have **ideas, that if put into print would be of** great help to other readers, and following these lines, we, herewith, ask that you send us any article that you feel will interest poultrymen—it makes no difference what it is, just so long as it pertains to poultry. If the article is used it will be run under your name.

Now write us at once and help make the 1915 Year Book the "Webster of the Poultry World." Address all mail to Managing Editor, 1915 Year Book.

Prize Awards in Chick Growing Contest for 1914.

ALTHOUGH there were over one hundred entries in the AMERICAN POULTRY JOURNAL'S Chick Growing Contest for 1914, less than twenty-five of the contestants sent in complete reports and photographs at the finish. The reports received were most of them very good. Quite a few contestants withdrew because they found the season a difficult one for getting satisfactory results with chicks and others had trouble with the required photographs. Some simply dropped out without giving any reason. However, we are quite pleased with the results obtained and are willing to attempt another similar contest next season if our readers want to give it another trial.

The winner of the first prize sent in two groups of photographs of the competition flock and all were so excellent that we have reproduced the ten pictures with the winning article in this issue. The first prize article is entitled "Success Growing S. C. W. Leghorn Chicks," so the "Blue" goes to a breeder of one of our most popular egg-farm varieties. Complete list of awards and varieties represented follows:

First prize—$15—C. H. Krumm, S. C. White Leghorns, Towanda, Pa.

Second prize—$10—A. H. Faulkner, White Orpingtons, Millington, N. J.

First Cockerel, Chicago, 1913

Parmenter's S. C. White Leghorns

THE GREAT CHICAGO (COLISEUM) WINNERS, 1913

Cocks—1st, 3d, 4th and 5th. Cockerels—1st, 3d and 4th.
Hens—1st and 3d. Old Pen—1st. Young Pen—1st.
Special Best Display.

The above record is not misleading. It was a great acheivement and speaks for itself. We have birds good enough to show any place. We know how to condition them. Our prices are reasonable. Address

Tenth prize—$2—Turner Harriss, Buff Plymouth Rocks, Carterville, Ill.

The prize articles will appear in AMERICAN POULTRY JOURNAL from time to time as we have space for them.

———o———

Oct. 8, 1914.

Editor American Poultry Journal.

Dear Sir: I have read with interest Mr. McCullough's comments in the October Journal in regard to Mr. Orr's stand in refusing to disqualify a bird of the clean-shanked variety for down *between* the toes. Mr. McCullough goes on to say that he thinks the American Poultry Association made a mistake when they made down *between* the toes of clean-shanked varieties a disqualification.

May I be permitted to call the attention of the gentlemen to a matter that may almost justify the actions of the one, and permit of fulfillment of the wishes of the other in this matter.

The 1910 Standard under the head of "General Disqualifications" says, "feathers, stubs or down *on* shanks, feet or toes of clean shanked varieties" shall be a disqualification. But under "Cutting for Defects" it plainly says that down *between* the toes of all clean shanked varieties shall be cut from ½ to 2 points.

Now, no matter what may have been intended, nor how the Judges may interpret the matter, and I have seen judges disqualify for down *between* the toes of clean shanked varieties, it seems to me that if the Standard is followed literally, as I believe it should be, I cannot see where a judge is justified in disqualifying a bird for this defect.

I have no axe to grind, as my birds, the Buff Orpingtons, are practically free from this defect. I have not one in my yards at this time with the defect, but I strongly feel that the defect when present in an otherwise fine specimen, should certainly not disqualify the specimen.

I believe in a high standard, but one that will do most for the advancement of the breeds along lines that will make them more useful, and I think that our English cousins are far ahead of us in this matter of making Standards, in that they look more to the vital and large things that go to make up a good specimen, and pay less attention to the minor details, heavy penalties on which tend to retard the de-

Smith's S. C. Buff Leghorns

The Largest Exclusive Breeder of Buffs in the World.

I have no other breeds. They are the world's best layers when eggs are high, and winners at thirteen of the largest shows. Eggs, Chicks, Breeding Stock and Show Birds by the thousands. PITTSFIELD Pure Bred Money Making Cockerels and Pullets

Barred Rock White Rock S. C. W. Leghorn R. I. Red

25% Below Regular Prices if You Buy NOW

We hatched 300,000 chicks this year. So high did they average that we have 8000 too many even after the most rigid culling. **During November only** you can buy our Barred Rock, White Rock, R. I. Red, and S. C. White Leghorn Cockerels at

$7.50	for our regular	$10.00	Superlative	Cockerel
5.62	" " "	7.50	Excellent	"
3.75	" " "	5.00	Standard	"

All are utility stock of the highest type, sons of heavy layers and bred in the original Pittsfield way to produce profit payers. Some are semi-show birds —all are pedigreed and toe-marked. We can mate them to unrelated females. They are wonderfully good birds at wonderfully low prices—but you **must order now** to get this bargain. Prices positively go up after November.

Day-Old Chicks. Order now for delivery next spring. Prices, all breeds. $5 for 25, $10 for 50, $18 for 100. Notice the lower prices on small lots.

Four- to Eight-Weeks' Old Chicks. February 1st to July 1st, 4 weeks: $15 for 25, $25 for 50, $50 for 100. 8 weeks: cockerels, $1; pullets, $1.50.

For the same reason we are sacrificing prices on cockerels, we offer 1500 S. C. White Leghorn pullets. They are selected from 3300 pedigreed birds—the big egg strain from which we will supply day-old chicks next spring. You gain a year by ordering now. Nobody ever offered such Leghorn values as these. $3, $4 and $5 pullets for $2.25, $3 and $3.75 each. **Special offer** of 15 Excellent pullets and a Superlative cockerel for $50 net; or 15 Standard pullets and an Excellent cockerel for $35 net; or 15 Superlative pullets and a Superlative cockerel for $60 net.

Besides these price reductions we must sell 1,000 hens that we would ordinarily keep another year for our own breeding. Start or renew your breeding pen while prices are so low. Barred and White Rock hens $2.50, $3 and $4 each. 12 hens of either strain mated to a cockerel for $33, $41 or $55.

Sure-to-Win Show Birds

While Pittsfield is strictly a utility strain we raise splendid exhibition birds. This year they are better than ever. The prices are moderate—but you must write early to get the choicest.

The European War and the poor hatches of 1914 mean higher prices for poultry and bigger profits for you. Order early and order plenty.

Write for our book, "Money Making Poultry."

Every Pittsfield bird is sold on approval, to be returned and money refunded if not satisfactory

190 Main St., Skowhegan, Me.

velopment of the breeds. In the matter above under consideration, however, I cannot see but what our Standard intended this defect to be penalized only to the extent of a cut, which will work for its elimination without at the same time too severely retarding the development of certain breeds by disqualifying some otherwise fine specimens.

Am I not right?

Yours very truly,
John St. John.

Roswell, N. M.

DR. WOODS' NOTES AND COMMENT.

Apparently European affairs are still a long way from any real settlement. When we went to press last month it looked as if it might be a long war, but some glimmerings of hope for peace were held out. At the present time of writing it still looks like a long war, it looks more like a fight to a finish and with little hope for any lasting or real peace until a real knock out blow is administered. With the "news" so strictly censored and coming chiefly through the combatants on one side only there is little opportunity to size up the situation and to date the conflict seems to be a "draw." The official bulletins admit that the great battles thus far have been "undecisive." With the odds of numbers and resources against Germany it would seem that she must in time be crushed, but it will take time and much fierce fighting to crush so brave, resourceful, well-trained and well-equipped legions of a military nation. Will America be drawn into the war? We hope not and we believe not. We have everything to gain and nothing to lose by keeping out of it.

* * *

Business in the United States is looking up and there is improvement all along the line. Some of our foremost business men believe that the United States is now in touch with its greatest opportunity for development and commercial prosperity. Intelligent producers all over the country are making ready to do a big business the coming season. "Made in U. S. A." is going to take on a new value, both at home and abroad. Getting a good start and an early start is recognized as the best means of making the most of our great opportunities. Once started right, keep plugging right along for more and better business, be optimistic, be hopeful and sure of success and don't miss any little essential detail of your business or any opportunity to get more firmly established on a better and more sound footing. Boost your business and boost for better business. If everybody lends a hand and does his level best we will enter into one of the most prosperous eras that the New World has ever known. Get busy now and keep busy!

* * *

A very hopeful and encouraging symptom here in our home land is the fact that our own local and national news of the day is crowding European war news off the front pages of our newspapers. It indicates that we are taking more interest in home affairs and less in the troubles of other nations. The advertising columns of the daily press show that our leading business houses are putting up a hot competitive fight for trade and are boosting American products. A trip through the shopping district of your nearest large city will convince you that business is booming. While we deeply sympathize with our afflicted friends across the ocean, we are taking a very healthful interest in our own affairs and promoting better business, progress, and prosperity. Keep right on boosting for the United States of America. Let your "patriotism" be the sort that builds up progress and prosperity and not the kind that kills and destroys civilization.

* * *

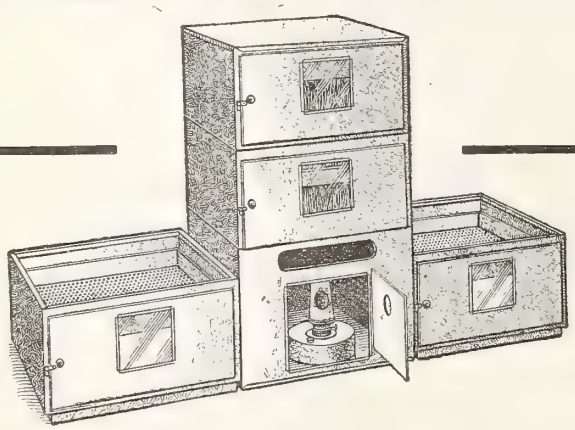
In many sections of the country the season has not been favorable for a good big crop of chickens. Good pullets and good yearling hens are rather scarce. The prices of poultry and eggs are about normal for the season and in some cases hold firmly at a slightly higher figure than last year. The demand for market poultry and eggs and for laying and breeding stock for utility purposes is good. From 25 to 35 cents a pound alive was paid for pullets in our section during the latter part of September and early October. A great many utility birds have changed hands. Fancy stock has moved a little more slowly but the demand for good breeding stock is steadily improving and the fall shows have been well-filled, well-attended and the exhibits good. It behooves fanciers to get an early and strong start and to work hard for their share of the better business which should come during the season of 1915.

* * *

We admire the brave stand that is being taken by British fanciers. The English poultry press is encouraging fanciers throughout the nation to "Stick to your poultry and help the country"—"Increase home production"—"Depend upon it, those who hang on to their birds will benefit later"—"Let there be no panic in the Fancy"—"Not a Show should be stopped; not a single useful breeding bird should be sacrificed"—and to "Carry on business as usual." Some shows have been abandoned from necessity, but many poultry exhibitions were

TEDDY V
Our Chicago winner, bred and owned by us.

Barred Rocks



Our Barred Rocks have made a national reputation as prize winners for our customers and for us by winning most of the prizes at the Chicago Show and at many of the largest shows all over the United States.

We have 1000 show birds; cocks, hens, pullets and an extra choice lot of fancy prize winning cockerels. Can furnish you single birds, pairs, trios or pens and guarantee to please you. Pure Bradley Bros. and Latham strains. Cockerel and pullet bred.

Why go east when we can furnish you better birds for less money.

Grand circular showing our Chicago winners, is free.

STANDARD ROCK FARM
TRUCKENBROD BROS. MENDOTA, ILL.

Moe's Sectional Oat Sprouter

A reliable double walled sprouter adapted to any size flock. As your birds increase in number add another section. First section contains the lamp box and two trays which will furnish ample green food for a flock of 50. Each section contains two trays and increases your capacity for 50 more fowls. Our special fresh air feature prevents the grain from moulding or becoming sour. Nothing like green food for increasing your egg yield in the winter. So constructed to supply plenty of heat and moisture. Manufactured entirely of heavy galvanized iron. No wood to warp or fall apart. One size only.

No. 59—Base with lamp and two trays..... $7.00
No. 60—Additional section with two trays..... $5.50

If not at your dealers, sent direct on receipt of price.

Otis & Moe Manufacturing Co., 2011 Otis Bldg., Chicago, Ill., U.S.A.

held according to schedule in spite of the deadly struggle across the Channel in which England is taking so active a part. If our friends in England, amid such stress and strife, remain so loyal to poultry interests as to strive to "carry on business as usual" surely we, who are so far removed from the battlefields and citizens of "a land of peace and plenty," can all lend our best efforts to promoting poultry interests and better business here in America.

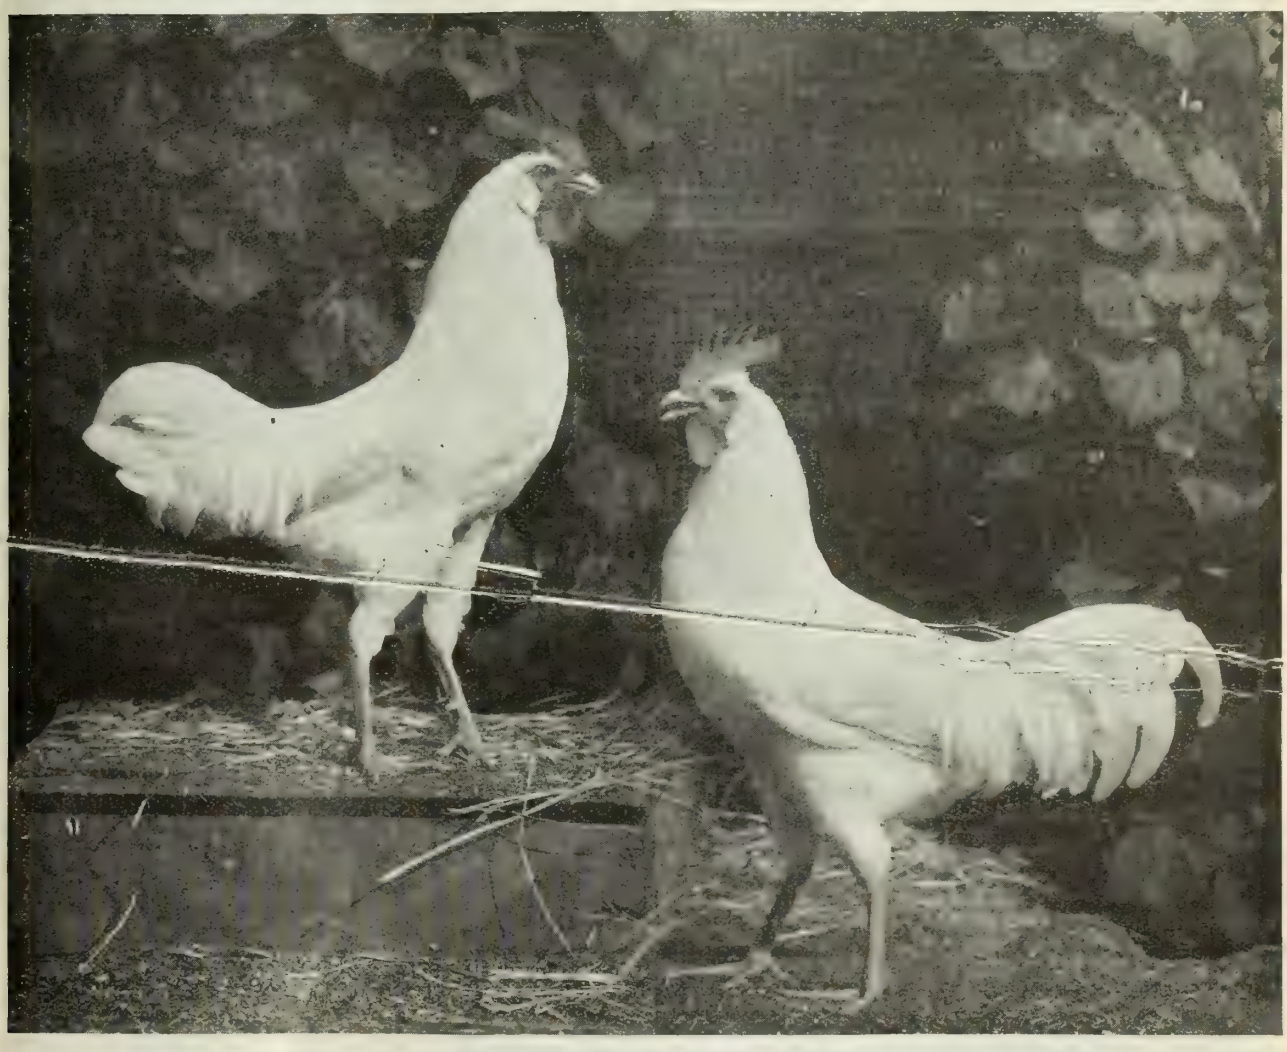
* * *

Prof. Edward Brown, in *The Feathered World* for September 11th, says: "I have been endeavoring to obtain information with respect to poultry and poultry breeders, as to what has taken place in Belgium as a result of the invasion of that country, but up to the present time have not been able to get in touch with those whom I know there. Some of them I fear may have fallen victims in the great conflict. That most of the poultry in the country will have been killed may be accepted without question, and I fear in many cases very great damage has been done to breeds. We must bear in mind that Belgium has perhaps been the most fertile country so far as the races of poultry are concerned.

"What I venture to suggest is that when conditions have resumed something like the normal, and the country is clear of invasion, British fanciers, who have found for many years excellent customers in Belgium, might express their sympathy in a very practical manner, namely, by donating birds, or, if the time is favorable, eggs for hatching for distribution in Belgium. I merely mention such a suggestion, as the scheme would require working out, but if the various poultry clubs on this side, as well as individuals, could combine in this way it would be an act of kindly generosity that would be appreciated by our *confrères* in Belgium."

* * *

The Feathered World editorially endorsed Prof. Brown's suggestion for practical assistance for Belgian poultry farmers and the following week was able to publish a list of 23 British fanciers who promised stock and eggs for Belgian breeders when opportunity occurs, and by this time the list undoubtedly contains many more names. Here is true fancier spirit and a practical illustration of the good fellowship that rules among poultrymen everywhere.



Please note what Prof. Brown says about Belgium, that it "has perhaps been the most fertile country so far as the races of poultry are concerned." Then bear in mind that a breed that a number of American fanciers would have liked to place in a Belgian class is to appear in the newly created "Continental class" of our new American Standard. Maybe some of our Standard tinkerers might profit by a study of the origin of some of the races of poultry. This comment is not intended as "criticism" but rather as a suggestion that may be "worthy of a thought."

* * *

Poultry clubs throughout England are urging poultry breeders to save all the pullets possible for egg production and to make selections of breeding stock for producing table chickens and, during the period of low prices for eggs, to incubate all eggs possible from the heavier varieties. It is not anticipated that the price of grain in England will materially increase and it is believed that better prices for eggs and poultry will offset the high cost of grain. Poultry keepers throughout the British Isles are encouraged to keep up or if possible to increase the supply of poultry.

* * *

During August and September there

Unretouched picture of two four-and-one-half-months' old S. C. White Leghorn cockerels, bred and owned by Eugene C. Smith, 317 Galena Blvd., Aurora, Ill. The illustration shows the remarkable quality of the birds. It further illustrates that when a breeder produces good specimens it is absolutely unnecessary to retouch them. The cockerels though not fully matured show the high quality and type which Mr. Smith has bred into his flock. Note the fine head points, and the fine back and tail carriage. The birds are absolutely white, free from creaminess and there is no doubt that they will be heard from at the coming winter shows. His fine catalogue is sent free on request.—L. A. Stahmer.

was a decided slump in the poultry and eggs market in England. Following the outbreak of the war a good many fowls and eggs were rushed into market and there was at the same time a considerable falling off in demand, with the result that the bottom dropped out of prices for the time being. By the middle of September some improvement in market conditions was reported and it was expected that eggs and poultry would reach maximum prices in November. Practically all Continental sources of eggs and poultry have been shut off from England by the war and are likely to remain cut off until the close of 1915 even should the war end soon, which seems unlikely now. Obviously the time is coming when the English grown poultry and eggs will not be able to fill the demand and there will be a call for American eggs and chickens.

* * *

Oats are in demand by the British Government for war purposes and the price has been prohibitive for the use of oats and ground oats by English poultrymen and fatteners. Possibly the fatteners will have to turn to Indian corn and wheat by-products for finishing poultry and may perhaps develop in Old England a taste for the soft-meated yellow-fleshed chickens so highly favored in American markets.

* * *

England has been accustomed to receiving huge quantities of turkeys during the holiday season from France, Russia, Italy, Austria and Servia. The war has cut off this source of supply entirely. Home grown turkeys are not likely to be sufficiently abundant to fill the Christmas demand in England and she will undoubtedly seek a supply from this side of the Atlantic.

* * *

An excellent harvest is reported for England and the granaries at the docks were reported full of all kinds of cereals early in September, the London storage warehouses well supplied with meats and other foods to last fully six months, but the supply of cold storage poultry practically exhausted. No importations of poultry or eggs expected from Continental sources before the middle or end of 1915 and possibly not then. On Sept. 9th feeding grains were reported easier in price and some feeds practically at normal prices.

* * *

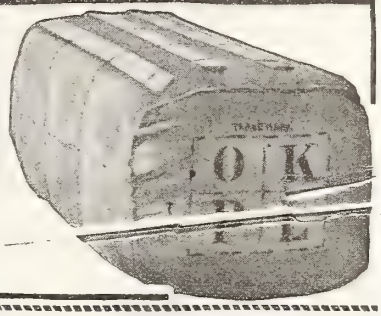
With such conditions in England when that country is at war,—with British poultry keepers planning to grow more poultry during the coming season and not to worry about the high prices of grain,—with every reason to believe that the ocean traffic channels will be kept open,—American poultry keepers should feel encouraged and get busy striving to increase the American crop of poultry. Grain is high, but why worry? We don't look for it to go much higher and the probability is that with our big harvests the price will drop to more nearly normal soon. Meanwhile those who grow winter chickens or soft-roasters or capons should realize good prices next spring. It will be a good plan to get out plenty of early chickens and to grow good sized flocks during 1915. We look for good prices for poultry and eggs, but not for very high prices. Good prices are better than very high prices for the latter usually cut down the demand. Good demand at good prices will make good business and good times are coming.

* * *

Recently we saw a complaint that White Leghorns are too wild, too easily frightened and too high fliers to commend them to the poultry keeper who likes tame fowl and has only limited range. The fault is not with the Leghorns but with the poultry keeper. This fall we bought 150 S. C. White Leghorn pullets representing several heavy laying strains. The poultryman who reared them on farm range had sold his farm and was selling out his stock. We haven't kept any Leghorns for at least 30 years. Of course they are high fliers and we expected that these pullets after being caught, packed in crates and carted over country roads, would be pretty wild and scary. We were surprised to find that these White Leghorn pullets prove even more tame and easy to handle than our own home grown Rocks and Reds and they are quite tame. Whenever we go into the Leghorn house the pullets climb all over us, get into our lap or on our shoulders and become decidedly intimate. We can pick them up from floor or roost without any trouble and they are not in the least wild, timid or frightened unless some one makes sudden and unexpected movements that startle the birds. They are nervous and

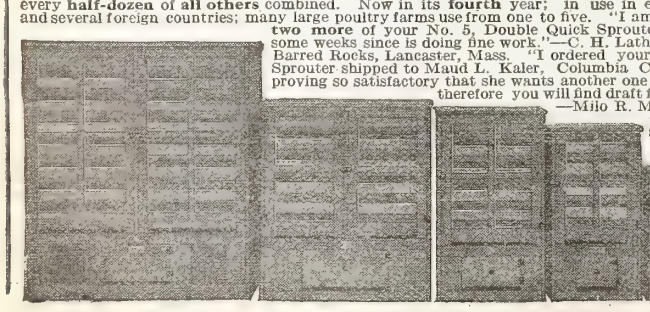
White Plymouth Rock pullet grown by Dr. Woods. She was bought day-old April 4; laid her first egg September 3, when just 5 months old. Her portrait was taken when she was 5½ months old and weighed just 4¾ pounds. She laid about thirty eggs and then became broody. See "Notes and Comment."

active but we have never had birds any more tame. Singularly enough the birds that are laying are the ones in the flock that appear to seek attention and petting. We have the entire flock in one house with four males.



* * *

When we bought the Leghorns we also bought quite a good sized bunch of yearling fowls including White Orpingtons, White Wyandottes, White Rocks, Barred Rocks and Buff Wyandottes so that, for the time being, we had, with the stock of our own growing, quite a little poultry show all our own. When we bought we did not expect to winter all of these birds, but at present they are laying so well and eggs are selling at a fair price that we may decide to keep them. Our original intention was to only winter about 200 pullets which could be comfortably cared for without employing help.



* * *

Last month we mentioned White Plymouth Rock and Rhode Island Red pullets that began laying Sept. 3d when just five months old. We really prefer to have pullets a little slower in reaching laying maturity, but these birds came to it naturally on free range with

no special feeding. An illustration from a homemade photo of one of the White Rock pullets is shown herewith. This pullet was just five months old when she laid her first egg. She was 5½ months old when her picture was taken and weighed just 4¾ pounds. She laid about thirty eggs and then became broody.

* * *

In the same flock with these early maturing pullets were several cockerels showing the same rapid development. "Bill," whose portrait is reproduced herewith, weighed just 7 pounds when 5½ months old at the time his picture was taken and he has several brothers that are close to him in development. Our Reds developed and matured as rapidly as the Rocks but did not make quite as heavy weights. We have quite a bunch of later hatched birds that have developed more slowly and will not lay before the first week in November, but we expect these to prove the best winter layers.

* * *

Our little flock of White Faverolles are making good growth but are developing more slowly than either the Rocks

White Faverolle chicken grown by Dr. Woods. Weight 4 pounds, age 4 months. See "Notes and Comment."

or Reds. They do not appear to have the constitutional vigor shown in our yellow skinned birds. The hen shown in the illustration is the mother of our Faverolle flock and she is remarkably white and snowy in coloring. One of her chickens four months old and weighing 4 pounds is shown also. Our Faverolle chicks when hatched were the whitest chicks we ever saw except some White Guineas we had a few years ago. They were snow white with not a bit of creaminess or smutty color in them. The chicks were hardy and grew well, but like all other white fleshed birds we have handled, they seemed a bit more tender and more easily affected by sudden weather changes than our yellow fleshed stock. We would prefer the Faverolle with clean shanks and it should be very easy to breed them that way and would only require a little selection. As to the number of toes we don't care whether they have four or five on each foot, for they are bound to come that way and it will probably take a lot of close breeding to either fix or eliminate the fifth toe. In our opinion the most important thing to do with this variety is to breed it for maximum constitutional vigor and hardiness combined with good growth and good laying qualities. Apparently there is not much difficulty in getting good type and color and if the White Faverolle is to be pushed as a utility fowl the scanty leg feathering or clean legs and the question of number of toes have little importance.

* * *

We have not yet had sufficient experience with White Faverolles to say anything about their value as a meat or egg producing breed. The hen shown in illustration was a fair layer, a good sitter and a good mother. The chickens are large framed and rather slow maturing, which should commend them as a meat variety where too early maturity is a drawback and size and softmeatedness are the prime objects. However, to get best results with market chickens one wants birds that will stand severe cold weather and the sudden changes of fall and spring without any set-back. In our experience the Brahma-Plymouth Rock and Cornish Brahma crosses and the straight White Rocks have yielded the best results in producing quick grown roasting chickens

that will stand forcing and severe weather and yield a good profit.

* * *

This fall in New England has been a rather trying one for poultry. The summer was colder than normal with only a few hot days sandwiched in between cold spells. Frosts came early and in September we had some record breaking cold weather for the season, this followed by an equally record breaking hot spell. Early October ran quite warm with a few very sharp frosty nights. Such weather and sudden changes are hard on newly housed young stock and it requires eternal vigilance on the part of the poultry keeper to avoid trouble. The hot weather the second week in October cut down our egg yield from early pullets which had been increasing daily from the time they were housed. In our experience hot weather hinders egg production much more than continuous cold weather.

* * *

We note that Editor J. H. Robinson announces that owing to business conditions the new *Poultry Weekly* will not appear on November 7th as advertised and a change of date is made. The new weekly poultry paper is now announced to make its first appearance in Boston on January 2, 1915. Expect that Editor Robinson feels just the same about war as Gen. Sherman did. Editor D. M. Green has announced that he is not to be associated in any way with Mr. Robinson or the new *Poultry Weekly*, so there's another "alliance" busted. Well, though it may be a bit early, we will wish the new weekly a Happy New Year right now before somebody does it first; may it grow strong and healthy and keep the peace.

* * *

J. H. Petherbridge in the Poultryman's Practical Dispensatory chapter this month calls attention to the abuse of poultry by the use of kerosene as a poultry remedy. We are glad to have this matter brought up again. Kerosene, or coal oil, has been variously and carelessly prescribed for a multitude of poultry ills. Kerosene has its uses for illuminating purposes and as an insecticide, but it should not be used as a remedy for internal use or local application. It is too powerful an irritant to be carelessly used. Many fowls and a good many chicks have been permanently injured or killed through the careless use of kerosene. Many times we have been called to see a flock suffering from "mysterious head disease," only to find the birds with heads covered with yellow crusts following the use of kerosene given in drinking water or applied to the head as a cure for colds and roup. Many fowls have been blistered on bodies, breast and under wings by kerosene applied locally to get rid of lice. Don't torture your birds by continuing to use kerosene as a remedy. It only causes trouble and there are plenty of good remedies that will yield satisfactory results and prevent suffering on the part of fowls that are the victims of an owner addicted to amateur doctoring.

"Bill," one of Dr. Woods' White Plymouth Rock cockerels, age 5½ months, weight 7 pounds. This chicken is only one of several early-maturing cockerels, and has been a pet of the Doctor's children this summer and is so tame that he can be picked up in the open field. See "Notes and Comment."

* * *

Nearly every practitioner recalls one or more cases of ugly and severe blistering, painful, dangerous and slow to heal, that he was called upon to treat because some ardent home-treatment advocate had applied a red flannel cloth saturated with kerosene to the skin of the victim to relieve pain. Many a

Moulting Weakens Hens—Tone Them Up—Start Them Laying

Moulting leaves hens in a weak, run-down condition. Unless you keep your hens toned up and healthy, they will moult well into the winter months and your egg crop will be the smallest just when prices are highest—just when you want the maximum number of eggs. So sure am I that

Dr. Hess Poultry Pan-a-ce-a

will shorten the moulting period, make your hens lay, keep them toned up and fit, that I have authorized my dealer in your town to supply you with enough for your flock; and if my Pan-a-ce-a doesn't do as I claim, return the empty packages and get your money back. Buy on that guarantee—you can't possibly lose.

1½ lbs. 25c; 5 lbs. 60c; 25-lb. pail $2.50 (except in Canada and the far West). My Pan-a-ce-a is never peddled—it is sold only by reputable dealers whom you know. Write for my free poultry book.

Our free booklet, "Thermometer Facts Worth Knowing," contains information that will help increase your poultry profits. A postal request will do.

Taylor Instrument Companies,
100 AMES ST., ROCHESTER, N. Y.
There is a "Tycos" Thermometer for every purpose. Ask for the "Thermometer Book."

fine bird has been killed by severe blistering resulting from roosting on a perch wet with kerosene. How kerosene ever won such wide repute as a cure-all no one is likely to explain, but probably because it was nasty smelling, easily used, irritating and cheap, helped to endear it to folk who still believe that any remedy to be good must be nasty and disagreeable.

* * *

Whenever it is necessary to use kerosene to get rid of head lice, as is sometimes the case with children sent to public schools, it should be promptly washed out with warm water and soap before it has a chance to irritate the skin. There are better remedies, though less generally available. The only use we have for kerosene as an insecticide on a poultry plant is when mixed with all the naphthalene flakes it will take

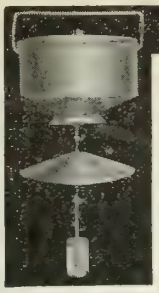
White Faverolle hen, the mother of Dr. Woods' little experimental flock of White Faverolles. See "Notes and Comment."

up and applied freely to roosts and drop boards in the early morning and to cracks and crevices in the woodwork to get rid of mites. Apply early enough to have roosts dry at roosting time.

Prof. Kaup Goes to North Carolina.

The many friends of Prof. B. F. Kaup will be glad to learn he has accepted a position with the North Carolina Agricultural Experiment Station as pathologist in charge poultry investigation, with rank of a full professor in poultry science. Much of his work will be devoted along pathological studies and the production of better strains of layers according to selection by Mendel's law.

Prof. Kaup was formerly commissioner of public health, of Spartanburg, S. C., a city that advertises itself as the healthiest city in the world. We welcome the professor back again in the poultry investigation field and wish him every success.



You'll not sleep tonight if you fail to read "Give Us Your Ideas." You will find it on the editorial page.

Ideal Aluminum

LEG BANDS for POULTRY and PIGEONS are the acknowledged leaders. Firmest and most secure lock. GUARANTEED to stay on. Price, postpaid, 12 for 15c; 25-20c; 50-35c; 100-60c: 175-$1.00; 200-$1.10; 500-$2.50. Price list and sample 2c.

IMPERIAL "RINGLET" BARRED ROCK COCKERELS.

This picture drawn from life shows the five wonderful Barred Rock cockerels that won all the regular and special prizes on cockerels at the last Madison Square Garden, New York, show, winter 1913-14. Owned and bred by E. B. Thompson, Amenia, N. Y. This winning of 1st, 2nd, 3rd, 4th and 5th prizes on cockerels at New York is an achievement never before accomplished by any Barred Rock breeder.

Home and the Table
Good Things for Everybody

Helen F. Woods, Editor

How often as we tread the sands of life
To pause is but inevitable. Yet thus to wait
Is not to stand with folded hands
While all the world sails by
And little children cry for bread,
Or men and women sigh
Just for the touch of human hand
Or one simple spoken word—
Perhaps a heart is breaking
So close unto thine own
The heart beats may be heard.
Where, then, is thy humanity? The moan
Of ship-wrecked souls that beat upon the rocks
Of hardened hearts and unoffered hands
Must strew the sands of life with human wreckage
Unless we can with skillful hands
Stretch forth the life line
To save some suffering humankind.
The many sneer, the cynic mocks;
But he who loves his fellowman,
With warmth of heart and ready hand,
Relieves and succors where he can.

NOTWITHSTANDING the progress we have made toward becoming civilized, there still appear to be a few people who hang on to that relic of barbarism of "hitting a man when he is down."

Why, for instance, should a man who has committed a diabolical crime or one who has by his acts proved himself sick of soul, be taken by society at large and shut up in dark and filth, and unhygienic surroundings generally? Actually stunted of oxygen to breathe, kept from the sunshine he most needs, literally chained in an atmosphere guaranteed to stunt if not actually kill every good impulse in him. And at heart he has good impulses, just the same as the best of us. That his environment and conditions under which he is forced to exist, may have so hemmed him in on all sides as to have weakened his power of resistance, we are practically certain. There are men everywhere who have broken laws and committed crimes of one kind or another, and who have suffered because of such acts. But no sane person commits crime or breaks laws just for the fun of so doing. There is or has been a condition which makes of the man a criminal, arising from his upbringing or present environment. Can we hope to cure him by abuse, as has been tried without success for centuries past?

Handed down from the dark ages comes the idea that the first step in handling a case of wrong doing is that of convincing the wrong doer of his utter worthlessness—he is a man not to be trusted, an individual to be despised, a human with whom all other humans have lost faith. He must be cowed, and kept under the most depressing conditions until his last vestige of self respect has died away, his self confidence utterly gone. Have we ever helped anyone by this treatment? Have we helped ourselves?

A certain supervision of wrong-doing, law-breaking classes is undoubtedly a necessity. So, too, is a supervision of people generally. Every business office, work shop, factory, railway gang must have its supervisor, and the scarcity of help lies not in the workmen but in the men who are capable of seeing that the work is done. The same fact is true of the supervision of wrongdoers. They are a class morally sick, having either confessed, or been convicted of their inability to keep from breaking certain laws. What shall be said of the keepers in charge of such as these? Have they been in any way fitted for work of this character? Are they men free from prejudice and petty spites? Are they men in whose association there is a chance to uplift the sick souls in their keeping? Or are they holding down their jobs through political influence with no natural fitness for work of this character?

Everybody knows or should know that we have never helped any one by unkindness and contempt. We cannot constantly and persistently dub another as dishonest and unreliable and expect him to deal honestly with us. We cannot hope to cure a man of dishonest dealings unless we place a little confidence in him and give him an opportunity to make good. We must believe in him, trust him, and otherwise regard him as a human being capable of the same desires and emotions, the same hopes and ambitions for betterment as the rest of us. The wrong doer has never been given a chance to redeem himself. If he confesses, the world forever after shuns his society. Others, perhaps equally as guilty, take pride in emblazoning his name before the public as that of a criminal, eager to "hit him when he is down." Human beings physically ill are given care and helped to recovery. The moral invalid seldom receives the same kindly treatment. He has done wrong, or shown a disposition to do wrong, so we drive him deeper into the mire.

We cannot treat human nature as bad and expect it to turn out good. We cannot improve conditions by inflicting revengeful punishment. What humans need most is not punishment, but training from infancy on. Give every individual a chance by making every one a trained worker, and every one trained to work.

Raisin Bread.

MAKE A SWEEPING RECORD AT NEW YORK STATE FAIR, 1914

In a Monster Beauty Class of 125 Birds. The Best Known Lines in the Country Competing.

We Won Cocks 1-2-3; Hens 1-3-4; Cockerels 1-2-3; Pullets 1-2; Old Pen 2; Young Pen 2-3; Best Display, etc.

No record has been ever made that surpasses this in such competition. The answer is that our Black Minorcas are better than ever before. For sale now—300 choice hens at special prices. We also offer selected cocks and a fine lot of youngsters that can win for you. New catalogue October 1st, write for it.

Frank McGrann, Owner Hiram Demmy, Supt. Lancaster, Pa.

half cupful sugar and a teaspoonful of salt. Beat an egg lightly, add two cupfuls sweet milk and pour into the dry mixture. Add also one cupful cleaned, seeded and floured raisins and mix thoroughly. Mold into loaves and allow to rise for twenty or thirty minutes. Bake for one hour, covering the loaf with oiled paper.

Mother's Scones.

Sift together two cupfuls of flour three teaspoonfuls of baking powder, one tablespoonful sugar and one scant teaspoonful salt. Mix into this one tablespoonful butter and one-half cupful cream and two well beaten eggs. Mix and cut into triangles. Bake a nice brown in a hot oven and serve at once.

Sally Lunn.

Beat until creamy one-third cupful of butter and two-thirds cupful sugar. Add two well beaten eggs, two cupfuls milk and sufficient sifted flour to make a light batter—about three cupfuls, together with three scant teaspoonfuls of baking powder. Pour into a shallow pan, sprinkle lightly with sugar, bake in a medium hot oven. Cut into squares and serve hot.

Delicious Pancakes.

By S. S.

Strain through a sieve one cupful of cooked apricots, prunes or peaches and add one well beaten egg, one cupful sifted flour, one teaspoonful baking powder, one cupful of juice from the cooked fruit and a little sugar according to the fruit used. Cook the pancakes in a smoking hot buttered pan, spread them with butter and sugar, sprinkling sugar and grated lemon rind over the top and serve at once.

Cushion Cake.

By H. B.

Cream one cup of sugar with one-half cup of butter, and two well beaten eggs. Add one-half cup of sweet milk in which has been dissolved two-thirds of a teaspoonful soda. Sift in two cups of flour and one heaping teaspoonful cream of tartar. Divide the batter. To one-half the batter, add two tablespoonfuls molasses, one-fourth teaspoonful each of ground clove, nutmeg and cinnamon. Also one cup of floured raisins. Put the dark mixture in flat baking tin and bake twenty minutes. Remove from the oven carefully and spread the light part of cake mixture on top and bake twenty minutes longer. Use a plain white frosting.

Old Lady's Cake.

By H. B.

1 cup butter
2 cups sugar
1 cup molasses
2 cups white flour
3 cups graham flour
2 cups sweet milk
2 cups raisins
2 cups currants
½ cup chopped citron
1 teaspoonful soda
½ teaspoonful each ground clove, nutmeg, cinnamon, mace
A little salt

Mix in the usual order and bake in a slow oven. This cake will improve with age.

Excellent Cake.

By H. B.

Melt two tablespoonfuls butter and one square chocolate together in one-half pint cup, add two tablespoonfuls sweet milk, two eggs and fill up the cup with milk. Sift into mixing bowl, one cup of flour, one cup of sugar and one and one-half teaspoonfuls baking powder. Add the first mixture, beat altogether and bake in two sheets and put together with butter.

Butter Frosting.

Cream a tablespoonful of butter with one cup confectioner's sugar and add sufficient sweet milk to spread. Flavor with vanilla.

STOP That Awful Waste of Good Eggs!

A good incubator hatches 100%. If you're getting less you're wasting eggs. Some other incubators *may* hatch 100%; the "BUCKEYE" *must*. We absolutely guarantee it to hatch every hatchable egg.

Prove the "BUCKEYE" yourself at our risk. We letyou try it 40 days. If it doesn't hatch 100% of all hatchable eggs we fulfill our guarantee without any argument. "BUCKEYES" are now priced

As Low As $7.50

east of Rockies and north of Texas. A little higher in the west.

"BUCKEYE" INCUBATOR 100%
Guaranteed to Hatch Every Hatchable Egg

Try it right at home. If it doesn't hatch every hatchable egg send it back at our expense. You can't lose on this offer. We take all the risk.

Nearly half a million "BUCKEYES" are in successful operation. Over 1100 dealers. This shows where the "BUCKEYE" stands.

When you get the ordinary incubator you take a chance. Even the makers don't promise you more than 60% or 70% hatches. We *guarantee 100%*, not once or twice but all the time and every time. Stop wasting eggs with undependable incubators or hens that leave the nest.

Makes no difference whether you're a breeder or only a beginner, we want you to try the "BUCKEYE." Any of the six sizes, 60 to 600 egg capacity. See how easy it is to get a strong healthy chick from every hatchable egg. Absolutely guaranteed.

"Making Money the Buckeye Way"—Valuable Poultry Book Free.

Tells how to select eggs, how to handle incubators and how to raise chicks after they're hatched. Tells the wonderful success others have had with with the "BUCKEYE" and explains why we are able to guarantee one hundred per cent. hatches for professional and amateur alike. **We send it FREE** together with our complete catalog of incubators and brooders and name of nearest dealer so you can see the "BUCKEYE." Don't Be Without It

TIMELY POULTRY TOPICS.

BY PLUMMER M'CULLOUGH.

THE small breeder who has a few extra good birds more than he wants to keep and still does not want to send them to the butcher will do well to place a small classified ad in our classified advertising. If you have birds worth it, you will find that it will pay you well. The investment is small and the results will really surprise you. No one told me to say this, as I am saying it on my own hook because I know it is true. There are many people who would buy your birds if they knew it, but you must let them know it, and how are you to do it unless you advertise? However, I want you to be sure that you have stock worth advertising. Don't advertise them simply because you bought them for "thoroughbreds," as that covers a multitude of sins with some people. A bird may be a well bred one and still be a rank cull. Advertise nothing but good birds—birds that you are not ashamed to send out—birds that will make a name for you. If you send out nothing but the real thing, you will find it pays, but if you have nothing but some culls to dispose of, then I would advise you to carry no advertising.

We see that the Poultry Item is about to discontinue the publishing of free reading notices and free "write ups." We are very glad to see this. We believe that this is what every journal should do. We have no objections to any journal writing a story about what any of the large, successful breeders are doing if the story is real and contains something that may be helpful to the readers, but we never did have any use for these everlasting free readers. If the pages of a journal are filled up with free readers, as are some of the journals today, it is no wonder that the subscribers get sick of so much fake write ups. The subscribers are paying for real reading matter and not for space to give some breeder or his stock a big send off when the editor really never saw the breeder in question or his stock either. I tell you the subscribers want more good reading matter—more writing that will help them in their every day poultry work and less of the free readers. They are the driest piece of reading any journal carries, and I don't believe that they do the breeder any good whatever. Every one who is well read on poultry matters know what they stand for. They know they are little better than fake write ups to please the advertiser, and few of them are read. I would not give you a rap for the average free reading notices and I shall be glad to see every journal cut them out for once and all.

Many writers are telling their readers to sell off the old hens now and make more room for the pullets. This is good advice to some and not good to others. In fact, it would be good advice to tell some poultry keepers to sell all the poultry they have and never start in again. But as to the old hens, I want to say that I think it is a mistake to sell all the hens, and some of them your very best birds, just because they are hens. If you only know it, the old hens will make your best breeders for next season. Keep some of your very best hens for your own breeding and don't make the mistake of selling

"Dandy" Bone Cutter

You needn't pay one penny for this bone cutter until you try it and it satisfies you. Feeding green bone is one of the first steps to gain a big egg yield. But the bone must be cut right. The Dandy Green Bone Cutter cuts *across* the grain of the bone, enabling the hen to digest the nutritive elements better and convert same into eggs, blood, feathers. Our terms on the Dandy Bone Cutter are

$5 AND UP

NO MONEY IN ADVANCE

30 DAYS FREE TRIAL

The Dandy costs less than most bone cutters and it works infinitely better. Also cuts meat, vegetables, roots, etc. To ensure big sales this year we have made special reduction in prices. Write quickly for free booklet. Prices are liable to rise next month, owing to big demand for raw material.

STRATTON MFG. CO., Box 17, Erie, Pa.

12 ounces of Germozone prevention

is worth a hundred pounds of any cure, especially in case of Chickens or Pigeons, where it is easy to treat the flock, but "some task" to doctor each individual.

That is the economical reason for giving Germozone twice a week in the drinking water. It keeps the bowels in order and wards off germ contagion through infected food or drink.

As a remedial agent, Germozone is always a good first choice in cases of Roup, Colds, Bowel complaint, Cholera, White diarrhoea, Canker, Distemper, Sore throat, mouth and eyes, Chicken pox, Eruptions, Burns, Swellings, Sprains, Sores, Cuts, Wounds, Loss of hair or feathers, etc.

For Chicks, Chickens, Pigeons, Birds, Dogs and all Pet or Domestic Stock, Germozone is a whole medicine chest. It does the work of a dozen antiseptics, remedies and liniments, at one-tenth the cost and with no need of expert diagnosis.

4 oz. bottle (trial) 25c.
12 oz. bottle (standard) 50c.
32 oz. bottle (farm size) $1.00.
Gallon bottle (128 ounces) $3.00.
Tablet form, mailable, 50c postpaid

Sold by most Druggists and Poultry Supply Dealers

One-dollar and three-dollar sizes delivered prepaid to any express office in the U. S. Sample and book free by mail on request.

B. M. BILLINGS Box A **OBERLIN, OHIO**

THE ONE INCUBATOR
WITH EVERY ADVANTAGE

There is one machine in which is combined every feature demanded by the business poultryman—economy, safety, convenience and efficiency. One which has been kept abreast of the latest scientific discoveries in the field of artificial incubation and is as much superior to incubators of earlier construction as the 1915 automobile is to the antiquated models of a decade ago. One which, with all its wonderful improvements, is now offered at prices much lower than formerly.

Don't be satisfied with "a pretty fair incubator"! Equip your plant with modern hatching apparatus. Decrease your labor; increase your hatches; insure results and profits. The

NEWTOWN GIANT INCUBATOR
600 to 24,000 Egg Capacity

will positively do all this. Read the evidence below.

"I am pleased with the Newtown Giant Incubator. It is very easy to operate and the eggs-turner reduces the work to almost nothing. The chicks are good strong, lusty, livable fellows. I have hatched about 80% of all eggs set. I cannot speak too highly of the Newtown!" W. C. CHAMBERLAIN, Atco, N. Y.

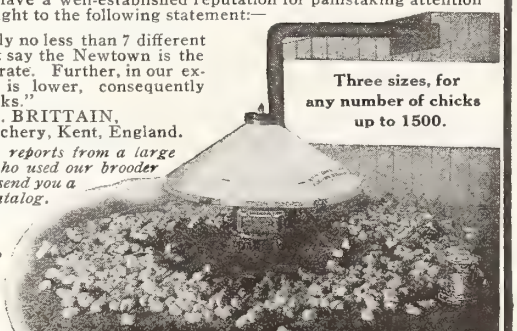
If you are dissatisfied with your present equipment, if you are planning to increase your incubator capacity, if you are just starting and demand the most efficient machine on earth, investigate the merits of the Newtown Giant—*the modern incubator.*

Our Incubator Catalog contains much information which you should have. It is free! Write for copy now.

NEWTOWN GIANT INCUBATOR CORPORATION
21 Warsaw Street, Harrisonburg, Virginia

BROODING TIME WILL SOON BE HERE

Are you ready for it? Better take a little time right now to consider this most important matter so that you may avoid expensive mistakes next season.



If you want to save time and money and *raise* your chicks, the

NEWTOWN GIANT COLONY BROODER
Coal-Burning, Self-Feeding, Self-Regulating

is the machine for you. No other brooder has given such general satisfaction or received such universal endorsement, because no other is so perfect in design and construction and gives such remarkable results.

The poultrymen of England have a well-established reputation for painstaking attention to their business. This adds weight to the following statement:—

"We have tried faithfully no less than 7 different styles of brooders and must say the Newtown is the easiest and cheapest to operate. Further, in our experience, the death rate is lower, consequently healthier and stronger chicks."
G. H. BRITTAIN,
Hartley Hatchery, Kent, England.

Three sizes, for any number of chicks up to 1500.

We have a booklet containing reports from a large number of successful poultrymen who used our brooder this season, and we will be glad to send you a copy, together with our Brooder Catalog. Just send us your address today. We'll do the rest!

Newtown Giant Incubator Corporation
21 Warsaw Street
Harrisonburg, Virginia

them just because some one has said so. Your old hens will be the ones that will produce the best and the strongest chicks for you. Another mistake many people make, especially beginners, is the selling of their best birds to some one just because they have been offered a good price for them. The man who is going to stay in business and build up the quality of his stock cannot afford to sell his best birds, even if he is offered a good price. He will need them for his own use and they should be worth as much to him as any one else and he should not sell them simply because some one shakes a few fives at him. I tell you, it is a mistake.

We have been cutting corn the past week and we have a small pen of birds, both fowls and chicks, back in the corn field. I don't think there is a better place for either old or growing stock than just back in the corn field. They seem to be happy all the time and it is surprising to see how much loose corn they pick up that would otherwise be wasted if they were not there. When I get to husking, they will be happier still, as there will be lots of loose grains for them to pick up. I like to see them around me when I am working out in the field and I am sure they enjoy it. The only trouble is that they are not very safe on account of the hawks. If it was not for this I would have nearly all my young stock back in the corn field. If you have a few chicks that are not doing as well as they ought to, just take them out to the corn field, put them in a roomy coop of some kind, and you will soon see a marked improvement.

If you cannot afford to have a turkey for your Thanksgiving dinner, you can get a chicken of the better sort and it should make you a dinner fit for a king. When we kill a White Rock we have something that is surely second to a turkey if not its equal. But to get real good chicken it is sometimes necessary to come to the country. I have seen chickens hanging in the meat markets in the cities that I would not care to eat. After all, there is no better place than down on the farm, if we only thought so. I would not want to exchange places with my city brothers, even if they do have many things much more convenient than we do. They don't have the pure air, the free life, that the farmer does, and this is a great deal.

The past fair season we have seen some splendid Buff Wyandottes exhibited and we are very glad to see this. The Buffs have improved wonderfully in both color and type the past few years and they are a beautiful variety. We are glad to see that the breeders of this variety are a live bunch and are doing all they can to boost their variety along. There should be more Buff Wyandottes in this country and we believe they will become very popular in the near future.

Questions and Answers

Conducted by
Prince T. Woods, M. D

Mites Look Big to Him.

Q. In your last issue I am again informed that mites are so small "they can hardly be seen by the unaided eye." Always the same story, and I suppose there are others like myself. For three years I looked for mites with a magnifying glass (in dust, etc., from under the perches, etc.), on a black hat and on white paper, and thought that my glass was not strong enough. This summer I felt something crawl on my hand, and there was Mrs. Mite big as a house, compared with my idea of a mite from reading. Anyone can see a common period at the end of a sentence in newspaper print and a full-grown mite is almost twice as large and looks like a mud turtle, only smaller. Easy to see and easy to get rid of. Will say that in my experience spraying is work done for fun and of little use and it is impossible to rid the average poultry house of mites by this method. Here is the way I do, and I have no mites or disease germs in my coops. Go to any drug store and get a supply of sulphur candles, also formaldehyde candles. Shut the birds out of doors. Close the coops tight and place just twice as many candles in the coops as the directions call for. Light them and leave the house or coop shut up for at least eight hours. Four hours will fail to get all the vermin. The sulphur candles kill the mites and other vermin and the formaldehyde will kill the eggs and germs of any kind. As a precaution, repeat in one week. For lice I use a spray of crude cresol* and water; the odor seems to drive the lice away and I very seldom find one on my birds. It is to be understood that any mites on the birds will escape, but if they take to the coop before the second fumigation they are dead ones. Fumigation must be done in the daytime and all the birds must be out of the coop during fumigation or they will be killed. Air out the coop well before the birds return to it.

Duluth, Minn. Dr. F. C. L.

A. *Cresol will not mix well with water unless saponified. We presume that the doctor means one of the many commercial disinfectants which make a milky solution with water. We use a straight crude cresol or "crude distillate" (costing about $1 for five gallons) to spray and paint on woodwork to get rid of mites and keep down lice. Same is used to paint ends of roosts and the drop boards are drenched with a solution of one pound of naphthalene flakes in a gallon of kerosene. This is applied with a brush and flows freely into all cracks and crevices. It is applied early in the morning so that the roosts will be dry at roosting time. Use auto-goggles over eyes when spraying "crude distillate," protect face and wear heavy gloves, as the cresol or distillate will "burn" the skin. Two thorough applications given one week apart will rid a poultry house of mites and generally will insure freedom from the pests for a year. The fumigation plan is good where it is practical, but with an open-front house it will be necessary to tightly close the open front during fumigation.

As to the mites, we thought Mr. Morman's article is excellent. Mites do *feel* mammoth when they crawl on your skin. The adults can be plainly seen when gorged with blood, their skins stretched like a tick's, and their color varying

SILVER WYANDOTTES
THE BEAUTY AND UTILITY BREED

Crisp, Green, Tempting Hen Feed for 15 Cts. a Bu.
Make Hens Lay Most When Eggs Are Highest

Mar. 26, 1914.
"The Successful Grain Sprouter is all you claim for it. By feeding sprouted oats to my fowls I have been getting plenty of eggs all winter, while my neighbors having the same size flocks do not get *any* at all."
E. H. MENEFEE
Correctionville, Ia.

Mar. 4, 1914.
"I am well pleased with the Successful Grain Sprouter. It is certainly wonderful. Sprouts almost in one night."
E. H. STRATMAN
1374 E. 80th St.,
Cleveland, Ohio

HERE'S the way to solve the high cost of chicken feed problem! Here's the way to get the most eggs just at the time of year when you can get the most money for the eggs! Sprout grain. Get a "Successful" Sectional Grain Sprouter—the best grain sprouter made—the one that leads them all. It will make 3 bushels of tender, green, egg-making hen feed from 1 bushel of oats, wheat or rye. Sprouts grain in 24 hours. Then, gives you an inch of crisp, green, tempting sprouts every day after that. Such feed will simply *make* your hens lay when egg prices are highest. It will make early hatches possible. Make winter chicks grow fastest—reach marketable size sooner, when prices are highest. For proof, read the letters printed in this ad.

Our Absolute Money-Back Guarantee Protects You Fully

"Successful" Sectional Grain Sprouter

Built All of Steel—Lasts Practically Forever

Double steel walls. Metal trays. No wood to rot. Can't warp, shrink or swell. Prevents moulding of food so usual with wooden sprouters. Made with *large* glass doors. Made in sections—capacity from 50 to 600 hens. A wonderful money-saver and money maker for both little and big poultry raisers. You can start with just the size you need. Then your "Successful" Grain Sprouter can grow as your needs grow. Write at once for full details. For valuable booklet on proper care and feeding of chicks, ducks and turkeys 10c. Address

Our Customers' Winnings

We have been deeply gratified at the success or our customers during the last year. Our strain is acknowledged as consistent winners. Young stock hatched from eggs purchased from us are everywhere showing up splendidly. Now, what we have done for ourselves and for others, we can do for you. Why not write us your needs today?

Winter Shows

Our manager, Mr. Harmon Bradshaw, is acknowledged to be one of the best conditioners of show stock in the country. We have a large number of cocks and hens now going through the molt that will be in prime condition for the winter shows. In addition, we have literally hundreds of young fowls hatched from all-star matings. If you are weak in a cock or a cockerel, a hen or a pullet; if you need a single bird or a bird to fill out your string—write us today.

"The Green Sheen Strain" so far as the appearance of our fowls is concerned, is especially noted for three things: Type, barring and the beautiful beetle-green sheen of the feathers. From the view point of utility, the females have been bred to lay, continuously, large white eggs. Poultry artists and judges agree that our flock is the peer of any in the country. We have 250 cockerels and 500 pullets of remarkable strength at the command of our customers. Information and literature will be forwarded for the asking. Absolute satisfaction guaranteed customers.

THE WILLOWS POULTRY FARM FRANK E. HERING, Proprietor HARMON BRADSHAW, Mgr.
Box 488, South Bend, Indiana

from red to black, due to the blood they have sucked from their victims. Young mites that are empty and hungry are not easy to see for some people, for they are pale and almost colorless animated atoms, but you can feel them quick enough if you are unfortunate enough to get sprinkled with them in some infested coop. To be exact, the adult female mite (when not distended with blood) is .70 mm. in size and the adult male is .60 mm. A millimeter (mm.) equals one twenty-fifth of an inch. Seven-tenths of a twenty-fifth of an inch of nearly oval colorless animate matter isn't always easy to locate with the unaided eye, but where mites are plentiful you will always find plenty of animated red and black "periods" (as Dr. L. describes them) crawling about woodwork at ends of roosts, cracks in boards or joints and cracks in the nests. Hope no one troubled with this pest will have any difficulty in identifying mites after this.

Male Bird Too Heavy.

Q. I have lost several Rhode Island Red hens; without the slightest warning they drop dead. I have opened and examined them carefully and could detect no cause of death except that one hen had a large liver. They have the best of care. I feed a dry mash and commercial scratch feed. Can you explain? Are the fowls fit to eat if bled at once after death? Do you suppose that the male bird is too heavy for the hens; he weighs 10½ pounds and the hens only from 5 to 6 pounds? G. W. A.
Bayonne, N. J.

A. The male is too heavy for the females, and that is probably the cause of your losses. Particularly so, if you have only a few females with the male and he treads the hens often. We do not care to use a male that is over 2½ pounds heavier than the hens. Few poultry keepers give sufficient thought to the protection of laying hens and pullets. While layers may sometimes stand rough usage and seem none the worse for it, it is a fact, none the less, that a hen in full lay is a delicate piece of mechanism and quite easily put seriously out of order. Rough handling of a layer just prior to or immediately after depositing an egg may prove fatal. When it is necessary to remove a layer from the nest, don't be rough about it and never grasp her under the abdomen where your grip will compress the soft parts. Good hens have been ruined or killed that way, more than is generally known. If you cannot use both hands to remove the layer from the nest gently and without squeezing pressure, it is better to grasp her by both wings near the shoulders, using one hand. Don't subject layers to rough handling. Don't use too heavy males. Don't allow too few females to a very active, vigorous male.

As to fitness of the birds for food, we presume they are all right, if your stomach don't say no. We never eat any fowls that are not specially killed for table use after due preparation and being kept without food for 36 hours. If a hen meets accidental sudden death by injury or smothering we bury or burn the carcass. Some thrifty folks may consider that a waste of perfectly wholesome food, but we had rather go without than to eat something that our stomach balks at. Fact is, that even with home dressed poultry we won't use it unless it opens up in good order. Finicky? Maybe, but we can't recommend for

others something we wouldn't do ourselves.

April Hatched Leghorns.

Q. Do you consider April hatched Leghorns good to use as breeders the following March? A well known breeder claims they are all right. Would like to have your experience.

Corfu, N. Y. W. P.

A. If wintered in good condition the April hatched Leghorn pullets should be all right for breeding next spring. We have quite a bunch of April and May White Leghorns that we expect to breed next February.

Cannibalism Among Domestic Fowls.

The following is a copy of an interesting communication forwarded to us by Secy. S. T. Campbell, of the American Poultry Association:

Halifax, Pa., Sept. 17, 1914.

Mr. S. T. Campbell,
Mansfield, Ohio.

Dear Sir:—A very interesting case of cannibalism among chickens has recently come to my notice and it occurred to me that you might wish to lay it before the association. I have a friend, the Rev. George Richter, who has been a United Brethren missionary in Rotifunk, Africa, until he came home on a furlough about four months ago. While on the field he noticed that his chickens were disappearing, for every morning when he opened their house several skeletons would be lying on the floor. He knew of no way that strange animals could gain admittance and determined to keep a close watch. One day he saw a number of the fowls jump onto one of their number and tear it all to pieces until nothing was left but the bones. This continued, constantly growing more frequent, until his flock of seventy-one was reduced to four, three of which he then killed. The remaining cockerel was torn open in several places and it would grasp a piece of protruding flesh, pull at it until it was loose and eat it, at the same time rolling on the ground and squealing from pain. Later Mr. Richter heard of another missionary having the same trouble.

The chickens in Africa are a scrubby, mongrel breed, the descendants of some introduced from Europe years ago. They are prolific hatchers, laying from seven to thirteen eggs at a stretch, and then starting in to hatch them. With care and good feeding they will gain fully 50

Make Your Hens Lay

When Eggs Are Worth Most

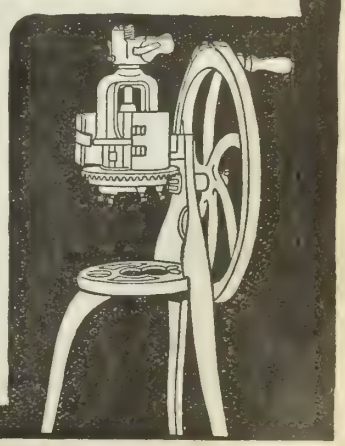
HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down



It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

Its self-governing feed automatically adapts the cutting to **your** strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on **10 Days' Free Trial**—no money down. If satisfied **after the trial,** buy it. If not, return it **at our expense.**

You want our good books, at any rate, send for them. We'll forward by return mail.

F. W. Mann Co., Box 56, Milford, Mass.

per cent in weight by the second or third generation and the natives are then anxious to buy them back. However, their second or third generation will again be back in type, due to the lack of care, so they attribute the white man's success to magic.

Very truly yours,
Frederick C. Smith, M.D.

(Note.—The above concerning common native fowl of Africa is interesting as the unusual report of cannibalism. It has been our observation that cannibalism is quite common among fowls wherever large flocks are kept. If dead or injured fowls are allowed to remain where other birds can get at them, they are quite certain to be eaten. The remedy is to remove the injured, wounded and bloody birds from the flock immediately on discovery of same and to burn all carcasses of dead ones at once. When the habit of cannibalism is once formed it is difficult and sometimes impossible to stop. From newly hatched chickens to adult fowls there is always the likelihood of development of cannibalism if there is favorable opportunity for forming the habit. This appears true of most animals, not excepting man. —Editor Q. A. Dept.)

Feeding Ducks.

Q. I find so little about how to manage ducks in your magazine. I have Indian Runner ducks and about 150 hens, but they do not lay many eggs. Please give a good ration for laying ducks and growing ducks, also for hens. Ducks have free range. W. L.
Fort Reno, Okla.

A. We did not realize that duck feeding and management had been neglected, but as above letter is same in substance with half a dozen others received the past month, we will try to make good with the desired information. Here are duck rations for all ages. The feeding of hens and pullets for egg production is covered in an article in this issue:

Ducklings Under Four Days Old.
Wheat bran, 1 bushel.
Corn meal, 1 peck.
Low grade flour, 1 peck.
Fine grit, 2 pounds.

Mix into crumbly mash with cold water and feed four times a day all they will clean up in twenty minutes.

Ducklings Four Days to Four Weeks Old.
Wheat bran, 1 bushel.
Corn meal, 1 peck.
Low grade flour, 1 peck.
Fine-ground beef scrap, 3 pounds.
Fine grit, 1½ pounds.

Beef scrap should be scalded before mixing with grain. Mix mash with cold water. Feed four times a day all they will clean up. Give cut green clover, fresh cut rye, or cabbage freely.

Ducklings Four to Six Weeks Old.
Wheat bran, 3 pecks.
Corn meal, 1 peck.
Low grade flour, 1 peck.
Fine grit, 1 pound.
Fine-ground oyster shells, ½ pound.
Scalded beef scrap, 3 pounds.

Mix in 10 per cent fine cut, fresh green food. Mix mash with cold water; feed four times a day all they will clean up.

Ducklings Six to Eight Weeks Old.
Wheat bran, 1 bushel.
Corn meal, 1 bushel.
Low grade flour, 10 quarts.
Beef scrap, 12 pounds.
Fine-cut fresh green food, 1 peck.
Grit, 3 pounds.

Mix into crumbly mash with cold water. Feed all they will clean up three times a day. Keep oyster shell before them.

Ducklings Eight to Eleven Weeks Old.
Corn meal, 1 bushel.
Wheat bran, 2 pecks.
Low grade flour, 2 pecks.
Beef scrap, 10 pounds.
Grit, 2 pounds.

Mix into crumbly mash with cold water. Keep oyster shell always before the birds. Feed green food with the mash at first, then less freely until within ten days to two weeks of market time. Then omit green food altogether.

Any One Can Win

where the classes are small or the competition is not keen and, dear readers, do not be led into believing that the fellow who makes big wins necessarily makes them in keen, competition for the name of the show does not indicate competition.

FAIRVIEW WHITE ROCKS

Have always hunted competition and have ALWAYS won their share of the ribbons. At the late Illinois State Fair, they won 1st and 3d cock on two; 1st and 4th hen on three; 3rd and 4th cockerel on four; 3rd and 4th pullet on three and 2d old and 2d young pen on one of each. You will note that I won two out of three firsts on old stock and did it with six less birds than my competitor exhibited in these classes, besides my share of seconds, thirds and fourths on young stock which was not matured enough to compete with the early hatched youngsters shown by my competitor. Was there any competition? Look up the report of the show and judge for yourself.

I have over 1000 young birds with blood lines the same as these and other noted winners and can furnish winners for any show, anywhere. Write your wants and mention American Poultry Journal. Catalogue free.

GUY DAILY Box A Jeffersonville, Indiana

PROOF THAT PARKS' STRAIN OF BRED TO-LAY BARRED PLYMOUTH ROCKS

Have laid their way into world-wide popularity can be found in our hundreds of unsolicited laying reports from all over America and the world.

Parsons Chicken Ranch, El Paso, Tex.—126 hens of your breeding have averaged 208 eggs. Percy Houghton, Sidney Devon, England—The birds I recently imported from you have laid splendidly. E. H. W. Broadbert, Lihua Kania, Hawaiian Islands—The birds you sent are not only good lookers but mighty good layers. W. V. McKenzie, Skagway, Alaska—Your chickens are certainly phenomenal layers. With the thermometer 20 below zero, they are shelling out the eggs that are selling at $1 per dozen. W. R. Hayne, Timura, New Zealand—Received the trio, they surely have the laying habit, one laid day of arrival and the other two days later. D. W. Fairlie, South End, Canada—I think your strain is a world beater. I never had anything equal them for egg production.

You'll find a lot still more convincing in my new large free cockerel circular, also a full description and proof that Parks' "bred to transmit the lay" cockerels with their over 25 years of careful selection, trapnesting and pedigreeing for eggs do stamp that improvement in the way of eggs on their off-spring. My last Winter's winnings show how close we breed to the standard requirements. **Cockerel circular free.** Cockerels, $3 up. 40-page catalogue, a dime. Deduct same from first order. (Mrs. C. W. Beatham, Cardena, Cal.—Your catalogue is worth more than many $1.00 books.)

J. W. Parks : Box J, Altoona, Penna., U. S. A.

Summer Ration for Breeding Ducks.

Heavy wheat bran, 3 pecks.
Low grade flour, 1 peck.
Corn meal, 1 peck.
Best beef scrap, 3 pounds.
Fine grit or sand, 1 pound.

Mix with cold water. Feed twice daily. This ration is for ducks kept on wide green range or pasture in summer season and intended for breeding stock.

Ration for Breeding and Laying Ducks.

Corn meal, shorts or mixed feed, equal parts.

Best beef scrap, 10 per cent.

Add a little clean, sharp sand.

To above mixture is added in season fresh, finely cut green food or cured green food in the proportion of four buckets of green stuff to each fourteen buckets of grain. The whole is mixed dry and then made into a crumbly mash with cold water. Sufficient low grade flour should be added to just stick the mash together, so that it will cling in shape when made into a ball with the hands. Feed this mash morning and night, all they will clean up in fifteen to twenty minutes. At noon give a light feeding of whole corn.

(Note.—The above formulas are copyrighted by Dr. Woods in his "Poultryman's Formulary" and are reproduced by permission.—Editor.)

A Question in Heredity.

Q. Every now and then I would ask you a question if you were here while I am studying the poultry papers. Here is a matter I would like to have discussed. After two years of breeding, which offspring will be the nearest pure, the male or the female? That is, of these two matings, which would show the most Minorca characteristics?

(1) Take a Barred Rock hen and a Black Minorca cock. The pullets from this cross put to a thoroughbred Black Minorca cock.

(2) Take a Black Minorca hen and a Barred Rock cock. Use a cockerel from this cross to mate with a thoroughbred Black Minorca hen.

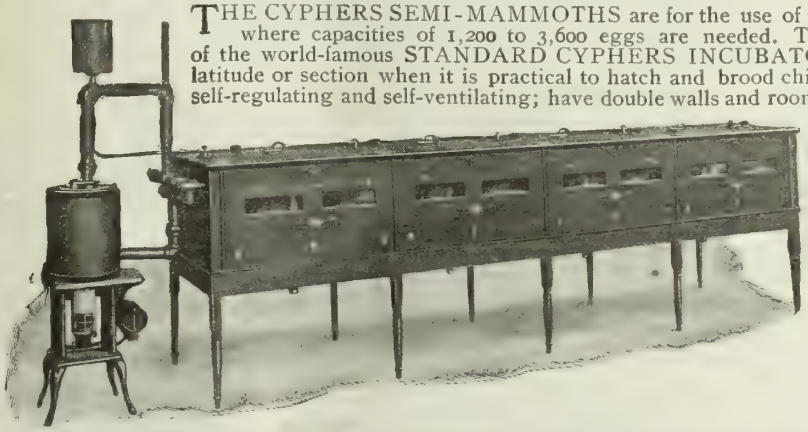
Which lot of progeny would show the most Minorca blood? I think the male in matings (1) would bring the line quicker than it could be obtained through females in the matings (2). In that case is not the male much more than half the pen? Hope you get what I am driving at. E. L. F.

East Millstone, N. J.

A. We know that the matings numbered (1) would produce a pretty fair grade Minorca. We never tried proposition (2) and believe the results would depend a good deal upon the cockerel selected from the first cross. There is a good deal bottled up in Plymouth Rocks; their ancestry is mixed and it is difficult to say, without trying the experiment several times, just how plan (2) would work out.

Hereditary traits and characteristics do not appear to be handed down in any exact proportions from either parent. Blood, *per se*, is not handed down directly to son or daughter, and half-breeds or quarter-breeds are not actually half-bloods or quarter-bloods. The blood of an embryo is developed solely from its own resources; it makes its own blood. The only things the parents contribute to the offspring are whatever may be contained in the ovum and spermatozoon which unite to make the perfect cell or impregnated egg. It is believed that only one spermatozoon actually impregnates or fertilizes the ovum, but a number of spermatozoa may lose themselves in the egg substance and we don't know what becomes of them, unless they are absorbed with the rest of the egg upon which the embryo feeds. The tiny spermatozoon carries apparently limitless possibilities bundled up in the small compass of its microscopic head; the ovum also carries wonders of its own. Exact proportions of definite characteristics are not handed down to each embryo alike. Each individual em-

A New Record for Nixon's White Wyandottes



At the big Inter-State Fair, Trenton, N. J., October, 1914, I made the following smashing win: 1st and 5th cock, 1st and 2d hen, 2d and 4th cockerel, 1st and 2d pullets, 1st pen, special for best male, special for best female and best display. **Lost first cockerel on sick birds.** This win was made on eight entries. Come to a specialist if you would be successful. Write for just what you need in good winners, layers or breeders.

Chas. Nixon, Judge and Breeder : : : Box 202, Washington, New Jersey

Cyphers Semi-Mammoth Incubators

MADE in two popular sizes, 1,200 and 1,600 eggs, heated by blue-flame oil stove, by gas or hard coal. Also made in larger sizes to be heated by gas or coal. Are built complete in our factory and shipped in compartments ready to be set up with ease and accuracy by any handy man. Illustrated descriptive circular and price-list to any address on request.

THE CYPHERS SEMI-MAMMOTHS are for the use of poultry plants, egg farms and duck ranches where capacities of 1,200 to 3,600 eggs are needed. They embody numerous patented features of the world-famous STANDARD CYPHERS INCUBATORS and will do excellent work in any latitude or section when it is practical to hatch and brood chickens or ducks by natural methods. Are self-regulating and self-ventilating; have double walls and roomy nurseries for newly-hatched chicks or ducklings; do not require heater pit, but stand free on floor of apartment and can be moved about like any small incubator.

From Photograph, Showing Four-Compartment, 1,600-egg size, Latest Improved Cyphers Semi-Mammoth Incubator, Heated by Blue-flame Coal Oil Stove. No Pit Required. No Coal or Ashes to Handle. Stands Free on Floor and Can be Moved at Will. May be Equipped for Use of Gas or Coal Heat if Desired.

Cyphers Regular Mammoths

Range in size from 4,000 eggs upward to any hen-egg or duck-egg capacity that may be required. Have been in successful use by customers four, five and six years, their field of operations reaching from Massachusetts to California and from Canada to the Gulf states. Are an extension of the Cyphers Semi-Mammoth, illustrated herewith, embodying the same patented Cyphers Company principles, but are heated only by gas or hard coal, on account of their large size or capacity. Are built in UNIT SECTIONS in our factory. Each section is crated separately, like a Standard, lamp-heated Cyphers and when uncrated is ready to be placed end to end with its mates, thus forming a complete machine. EACH COMPARTMENT or egg chamber of both the Cyphers Semi-Mammoths and Cyphers Mammoths, HAS SEPARATE REGULATION—a feature the buyer should insist on in selecting a hatching machine of this type and capacity. WRITE TODAY for descriptive circular of these latest improved Cyphers Company "wholesale hatchers." Address our nearest branch store, or "Mammoth Department" at our Buffalo offices, thus saving time.

Cyphers Incubator Company Dept. 652 Factory and Home Offices, **Buffalo, N. Y.**

bryo is different and gets a different proportion of parental legacy or influence. The progeny may resemble the sire, the dam, or the grandparents and farther back. Usually the closer the inbreeding the closer the "family resemblance." If "blood" were transmitted to the progeny in exact proportions, you ought to have the same proportion of "blood" from both (1) and (2), but it does not work that way. Neither can you say that the sire has more influence on the progeny than the dam, for in both sexes the prepotency varies with the individual and what is back of the individual. We still have much to learn about heredity and a good many are apt to attribute too much to heredity and too little to environment and care and feeding during growth. There are many interesting theories about heredity, but none of them satisfy. The "laws" are not absolute.

Eye Disease in Southern Flocks.

Q. I have a flock of several hundred White Leghorns and have lost quite a few with some eye disease. The first symptoms seem to be watering of the eyes, fever and great thirst. A thick white, frothy looking matter forms in and around and particularly over the outside of the eye and later in nostrils and roof of mouth. The eye seems to be pushed back into the head. The cornea becomes milky, fowls quit eating and die. Frequently only one eye is affected. The matter that is formed is hard, or rather the hardness and color of ordinary fat of animals. There is no odor and no running of nostrils, or if any it is very slight. No wheezing or coughing. There is no pushing out of the eye as in roup, but it is covered over on the outside under the lid which closes. I have been told by Floridians that the trouble is due to a small white worm which enters the eye. I have autopsied quite a few with a magnifying glass, but have found no worms. The trouble is quite common here in the South and is fatal or if recovery takes place the fowl will be blind in affected eye. What is it? What preventive measures can be taken? What is the cure, if any?

I have examined chickens in the early stages under the glass and find that the disease seems to start with a white colored ulcer upon the inner surface of the upper eyelid near the forward upper corner of the eye. W. B. M.

Olga, Fla.

A. Best remedy is to use a few drops of a freshly prepared 25 per cent solution of argyrol in affected eye several times daily. Use less often after improvement begins. First, free the eye from secretions by bathing with a 3 per cent boric acid solution. Treatment to be effective should begin as early in course of disease as possible.

The trouble is an infectious and ulcerative inflammation of the mucous membrane of the eye and usually also of mouth and nostrils. It may be an extension of mouth and nose disease to the eye or may be direct infection of eye introduced by scratching with toe nails that carry infectious matter. The source is to be found in the soil of much used, not properly disinfected and sweetened runs, old earth floors, old dusty poultry houses, mouldy and musty leaves and litter and in musty, dirty, dusty grain. Remove the cause. Clean up and use a creolin disinfectant freely about the poultry houses. Sweeten all yards and runs by top-dressing with lime, ploughing and frequent planting of quick growing grain. Do not allow fowls to run in shady swamps where there are many decaying leaves and quantities of other rotting vegetable matter and fungus.

Cockerel With One Undeveloped Wattle.

Q. I have a cockerel with only one wattle developed. The other is small and drawn up. Would that injure him as a breeder? Otherwise he is one of the best I have raised. Can I obtain back numbers of AMERICAN POULTRY JOURNAL. E. E.

Rutland, Ill.

A. It would be interesting to mate up the cockerel with a few females and note results. He may develop the other wattle later. We have noted cases where comb was slow to develop and only one wattle grew to normal size, where post mortem examination showed imperfect development of the testicles.

If you will state what back number you want of A. P. J. our Chicago office may be able to supply it or you may be able to obtain same from some of our readers. Back numbers are usually a very "short crop" and difficult to obtain.

—o—

Have you read the editorials? Two of them are bound to interest you, "What's Your Name" and "Give Us Your Ideas."

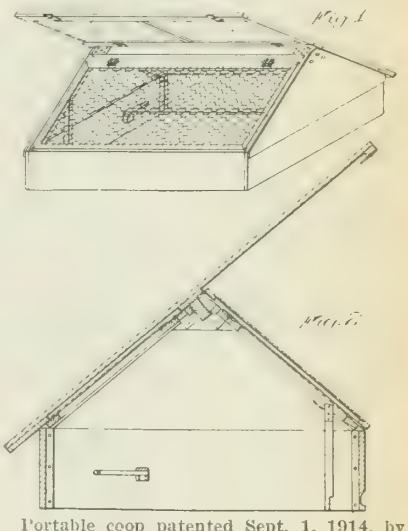
Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

A portable grazing pen and chicken coop, invented by Boniface Spanke, Nevada, Mo., is mounted on casters so that it can be readily wheeled to a fresh plot of grass without the trouble of pulling up and redriving stakes or having to chase the chickens around the lot in an effort to get them cooped up again. The frame of the pen is made up of inverted U-shaped members and cross-bars, supported on rollers, with an

Portable grazing pen and chicken coop patented Sept. 1, 1914, by Boniface Spanke, Nevada, Mo. No. 1,109,477.

open bottom, covered top and screened side panels. A coop may be carried on this pen, there being a movable bottom forming a doorway between the two. Patent No. 1,109,477.



A coop adapted to provide ample ventilation without subjecting the chickens to inclemencies of the weather has been invented by Israel Putnam. The roof is in one solid piece, turning about a single center. It may readily be reversed in position so as to close the side exposed to cold or storms, while affording the advantages of an open-air house. An inner covering frame covered with cotton cloth, is hinged to the roof at one side of its axis. This cover is normally secured to the roof, but may be closed to keep out cold when desirable. Florence M. Putnam and Charles L. Hart, both of Elmira, N. Y., have acquired the patent rights. Patent No. 1,109,177.

A coop fastening invented by George W. Fletcher, Mendon, Ill., permits of the removal of one slat from the coop without disturbing the others. This slat is mounted in slots in the ends of the coop, and is held in place by its engagement with a spring-controlled finger mounted in a plate over a portion of which the removable slat lies. Patent No. 1,109,057.

A brooder invented by Nyla Q. Kelso, Tulsa, Okla., has been patented to him to John D. Wynn, of Tulsa, the latter acquiring a half interest in the patent. It has a heating and a scratching chamber. A heater box, in which a kerosene or other lamp may be placed, is attached to the side of the heating chamber. The novelty resides in the flue, which leads from this heater box through the adjacent heating chamber, returning to terminate in the heater box, from which another flue leads through the scratching chamber, terminating outside its opposite wall so that no smoke can escape into the brooder chambers. Patent 1,110,941.

A chicken holding device is the invention of Harry W. Leyh, Jeannette, Pa. Its purpose is to hold chickens while being operated upon or for the purpose of plucking out "off-colored" feathers, or for washing the head and feet to put the fowl in show condition, etc. Patent 1,109,772.

A new thermostat for incubators, invented by George Cugley, Springfield, Ohio, has been patented to the Buckeye Incubator Company, of the same city. It has a series of four channel-shaped members, the intermediate members being more expansible than the outer members, arranged back to back and connected together at or near their centers, one of the intermediate members having a pair of notches cut in each of its side walls, and the other of the

Portable coop patented Sept. 1, 1914, by Israel Putnam, Elmira, N. Y. No. 1,109,177.

intermediate members having a single notch cut in each of its side walls, intermediate the notches of the other members. The object is to secure the maximum movement by the expansion

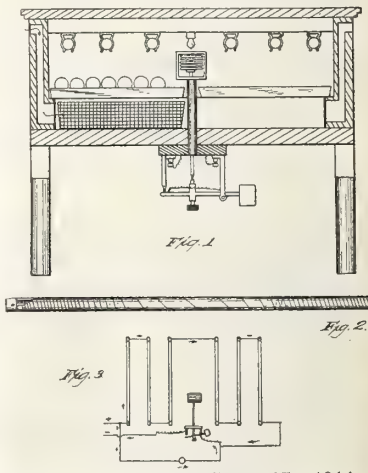
and contraction in the minimum amount of space. Patent 1,111,138.

An electric incubator has been invented by Lyman C. Byce, Petaluma, Cal., its principal feature of novelty residing in the manner of winding, the coils of the conductor being widely separated at the centers of the cores and being closely related at the ends of the core, whereby to provide the maximum heat at the bounding walls of the chamber, with a view to avoiding concentration of heat at the center



Roosting device patented Sept. 1, 1914, by William Callaway, Wichita, Kan. No. 1,109,612.

of the chamber to the neglect of its corners or sides. Patent 1,110,532.

A roosting device for fowls, invented by William Callaway, Wichita, Kan., has a webb mounted on belts disposed over rollers on a frame beneath the roosts to catch droppings. The rollers which carry the belts are mounted on spaced shafts. The device may be readily cleaned, as is obvious. Patent No. 1,109,612.

A sliding bottom for incubators, invented by Charles L. Vetter, Philadelphia, Pa., receives the chicks as they are hatched, and can be removed by dropping to a position in which it is removable, to permit its use in the dropped position as a brooder. A new setting of eggs may be started on another bottom in the place which the first formerly occupied, the second bottom being made the top of the brooder. Patent 1,109,269 .

Incubator patented Sept. 15, 1914, by Lyman C. Byce, Petaluma, Cal. No. 1,110,532.

A new automatic chicken feeder, invented by William L. Keller, Kearney, Neb., is operated by the weight of the chickens alighting on the depending perch. Patent No. 1,112,068.

Womans Success With Poultry

Helen F. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

FIRST EXPERIENCE WITH DAY-OLD CHICKS.

BY MRS. E. C. BAILEY, KINGSTON, MASS.

ON account of the difficulty in getting first quality table eggs at all seasons of the year, we have kept a few fowls on a back lot for a number of years and have been well repaid, having supplied not alone our home table but several neighbors as well.

During the past winter after visiting the great Boston Show, we could not longer resist the desire to actually engage in thoroughbred poultry raising, and placed an order with a well-known breeder of Rhode Island Reds for one hundred day-old chicks to be delivered the second week in March.

Part of Flock of Rhode Island Reds and Two Woods' Houses Which They Occupy.

The chicks, one hundred and six in all, arrived at the appointed time, which happened to be cold, wet, disagreeable weather, and about half of them looked fit candidates for the morgue on their arrival. These were hustled into a warm blanket-lined basket by the kitchen range, in an effort to revive them. In a short time, however, they gave every indication of being a very much alive bunch of chicks, and were soon moved to the brooder, where the rest of the flock had been housed. Only one chick was dead on arrival.

For the first few days we devoted a great deal of time to them, teaching them the way in and out of the hover, and feeding about every two hours. Clean drinking vessels were kept filled with water (chill taken off) before them all day. The floor of the brooder was well covered with a litter of hay mow chaff and fine sand. The chicks were first given hard-boiled egg crushed and mixed with a little dry rolled oats. Gradually they were introduced to a diet of mixed grains (ground chick size), boiled rice, raw potato cut into chunks, with a dry mash mixture before them most of the time. As they grew older they were allowed scraps of fresh meat from the family table occasionally or any fresh green food available. Plenty of fresh green sods of earth were provided them until they were given a good grass run, changing the brooder or coop from place to place as the grass was eaten by them. On several occasions we noticed a chick appearing rather dumpish, and such specimens were always immediately removed from the rest of the flock and placed in solitary confinement in a warm, comfortable place and given time to recover, away from the hustle and bustle of the rest of the flock. We lost but three chicks from the entire flock, one of these having his neck broken by the brooder lid falling upon him. The other two were weaklings and died during the first few days.

The one hundred and two chicks grew apace and when they were sufficiently developed to go into a colony house, we ordered fifty White Rock day-old chicks from a near-by breeder to refill the brooder. We received fifty-one of these, and followed the same general plan of caring for and feeding them, with equally as good success, having raised to maturity forty-nine specimens. The White Rocks, however, not having the same opportunity in the shape of a grass run, did not develop as rapidly as did the Reds. While the Rocks were supplied from time to time with green food, they showed the lack of grass run.

As the two flocks developed, we began erecting small-size Woods' open-front colony houses, and now have three of this type. At present we house fifty birds to each house, but shall cull out the male birds before cold weather, and these houses will then comfortably take care of the pullets during the coming winter.

In the flock of Reds we had forty-eight cockerels, leaving a little over half the entire number pullets. A number of the cockerels we have sold for breeders from two to five dollars each, and have sold two dozen, in dozen lots, as roasters, at 28 cents per pound. Not having had any experience in preparing fowls for market, we took these birds, after having starved them for twenty-four hours, to a near-by professional picker and had them properly dressed

Harold Tompkins' Rhode Island Reds

Both combs have started again to demonstrate their worth over all comers. At the great Brockton Fair, just past in the cream of the East, they won 1st pen, 1st and shape special, hen and 3d pul. on 4 entries. Hundreds of show and breeding birds ready now. Write your wants.

COLE'S BUFF PLYMOUTH ROCKS

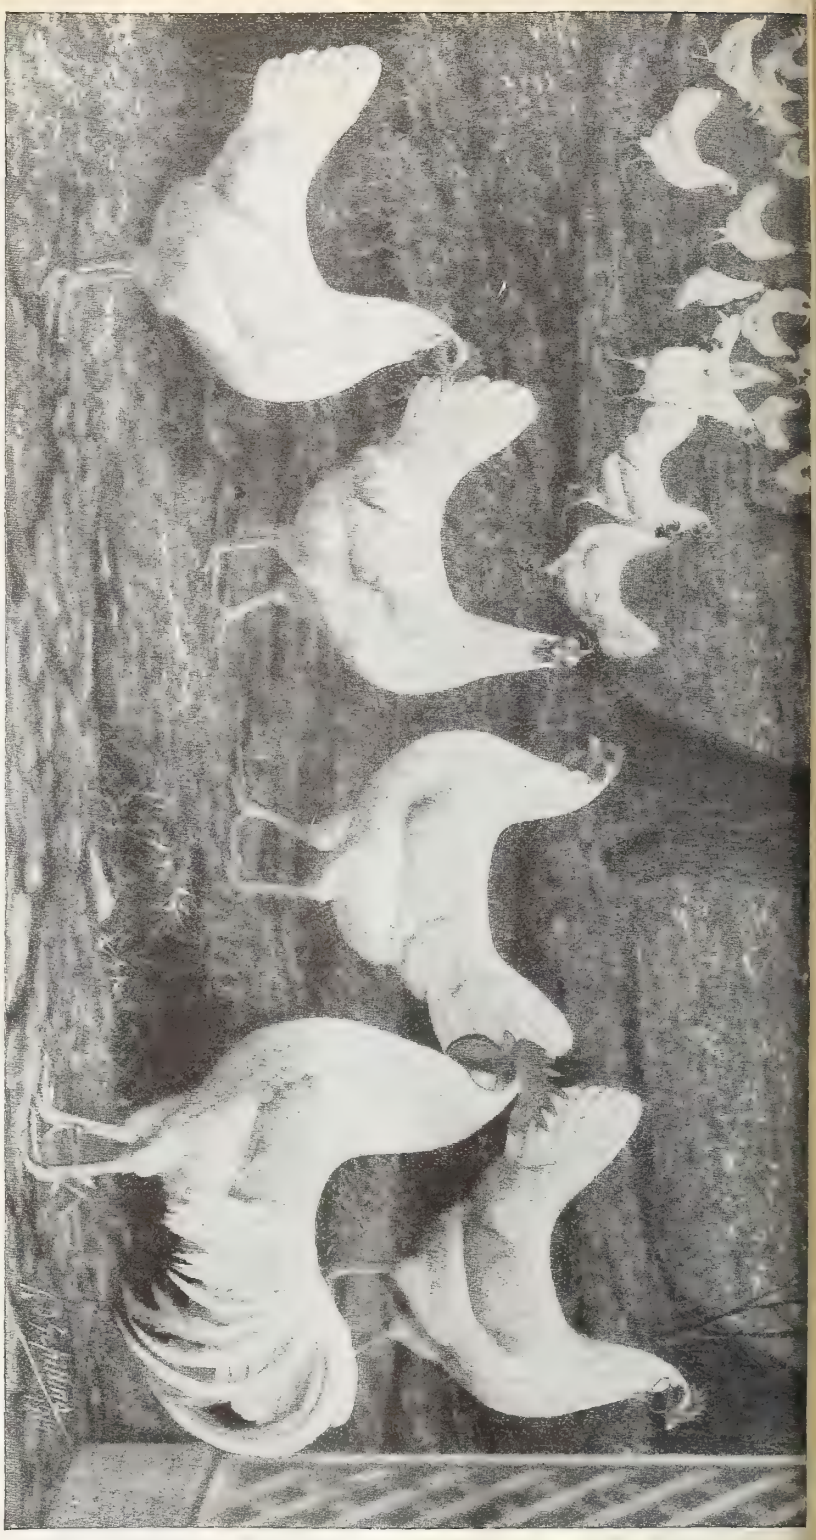
Are among the best in the world. Won at the great Coliseum Show, Chicago, Dec. 1913, 1st and 4th cockerel, 1st pullet, 3d hen, 1st pen young, best display. For Sale—50 yearling hens at $2 and $3 each. Young stock now ready for delivery. Some fit to win in any show.

Frank C. Cole : : Catalogue Free : : Van Wert, Ohio

and chilled in ice water at the rate of 5 cents each, with the result that both shipments have been entirely satisfactory.

We found the first pullet's egg from the Reds (hatched the second week in March) on September 12, and the yield has been gradually increasing since that date. The eggs are a beautiful brown color and not as small as the usual pullet egg from many other varieties.

The Rocks, being much later hatched, have not yet sufficiently developed to tell positively the percentage of males in the flock, but they look to be about evenly divided.



We attribute our success with these two flocks to the fact that they were from healthy parent stock, well hatched, and have been fed good, wholesome grains in great plenty and variety. Also they have been open-air housed and consequently have not been stunted by overcrowding in close, unventilated coops. A good part of the time they have had free range, but at all times have had a good-sized run. While cracked grains were used, these were taken whole to a near-by mill, cracked and mixed according to the varieties most relished by the chicks. Nothing but the best of clean, sound grain was used in the dry mash or chick food during the weeks of their early development, and the little fellows were never allowed to grow weary of the same old diet, day after day. If you do not believe this makes a difference in the daily life and development of a chick, try a little boiled rice after a prolonged diet of grains or mashes, or toss them a few chunks of raw potato, raw beet, scraps of lettuce, swiss chard or cabbage, or boil a few fresh fish, or a piece of gristle and chuck of beef, or neck of lamb, with a few scraps of meat to be picked out, and you will become convinced that life immediately takes on a new interest with the entire flock.

The work of caring for these flocks has not been great. At first we devoted ourselves to them until they seemed to be able to know where to find warmth, food and water, and after that all we had to do was to keep them supplied with these things, and they did the rest. They were never idle while there was a place to scratch or anything to pick at. After an early spring rain, they became quite enthusiastic over the rare find of a number of angle worms in their run, and thereafter as soon as a shower was over made haste to get out on Mother Earth in search of a good cheap meat food.

We are keeping a record of eggs and expenses and think that a family with land enough to keep a flock of fowls can increase the family income and insure their own table the best of food in the shape of eggs and chicken, aside from the genuine pleasure of producing a valuable food product.

VALUES IN POULTRY.

E. B. TEMPLER, VALLEY FALLS, N. Y.

DURING THE PAST few years many lots of pure bred birds have changed hands at almost fabulous prices. The beginner as he has read of these transactions has undoubtedly felt that there was something radically wrong in this—for to his way of thinking "no hen was worth over a couple of dollars." Now it may be that in some of the sales the advertising element had something to do with the price, and for that matter, it was on both sides—that of buyer and seller. The buyer knowing that when he purchased the birds he would get a certain amount of advertising and prestige from the deal, and the seller taking advantage of the winnings of the birds to place a high value on them. The proposition is a fair one from either standpoint, and without question the birds made themselves valuable both by their breeding and their winning at the leading shows. However, when we come down to ordinary fowls, the matter of value must be determined by certain conditions, and it may be well for the beginner to know something of these conditions in order to understand the transaction. Misunderstanding has caused a lot of trouble between buyer and seller, for the simple reason that they look at the transaction from different viewpoints. The breeder has knowledge of the value of his birds and the beginner, who is possibly the one buying, has no comparative knowledge of any fowls.

The breeding back of the birds has much to do with the value that the breeder places upon him. If the dealer has for years been carefully breeding a certain variety, trap nesting them for eggs and breeding each year from his best stock, he is entitled to better prices than the man who is doing haphazard work. If it is a question of show stock, the breeder knows what his birds have done and what a certain bird is worth as a breeder or as a show specimen for future shows. If he demands a pretty good price for such a specimen, the bird is worth it and the buyer should have some regard for the breeder's valuation in the matter. No man wants to take time and money to improve his stock and then sell the product for the same money that some careless dealer can get for birds that possibly "look as good." These latter specimens may be all right just as they stand, but when you begin to breed from them it is an entirely different matter. The well-bred bird is in a fair way to produce well-bred offspring, while the poorly bred bird will usually produce mongrels. It is better to have quality in stock even if you have to pay a little more for it than you would for the quantity kind. If the man from whom you purchase your birds asks a pretty stiff price, you may feel that he has a reason for demanding a good price for his goods. You can buy a suit of clothes for ten dollars or you can get one for twenty,—each suit will have the same number of yards of goods in it and at a distance will look very much alike, but the careful inspection will show the difference. You will find one suit to be of inferior material, carelessly made, while the other is of finer quality and more carefully tailored. You can tell the difference by wearing each for a year and then note the well-worn appearance of one and the still natty looks of the other—it is a question of workmanship and quality of material that counts in the long run. The poorly bred bird will show his breeding after a time, while the well-bred one will far better maintain the quality of his parentage.

This same thing may be taken into consideration with regard to hatching eggs. Some breeders will charge ten dollars per sitting, while for the same number of eggs from the same variety another breeder will ask but a dollar for the fifteen eggs making the sitting. Where is the difference, you will ask. The man who asks ten dollars for fifteen eggs has a reason for asking the price—he has undoubtedly been breeding these birds for many years past—has exhibited them at the leading shows and won prizes on his stock. If anyone is entitled to compensation for his labor it is this poultryman who has worked hard to establish his strain and win over competitors. You yourself would be unwilling to sell for less after you had worked hard for results. The man who charges a dollar a setting may have stock that are poorly bred and hence the eggs are dear at the price he asks, although apparently the price is small.

Value is dependent upon many conditions which the beginner does not often take into consideration. There is a reason why one bird should be worth $500 while another may not be worth $5. There is also a reason why one egg for hatching is worth $1 where fifteen may not be worth the dollar. When you stop and take into consideration the breeding, the care, the show records, the trap nest records and other valuable data, it will not be so hard to classify values according to correct standards.

The Cast Iron Brooder That Lasts a Life-Time

The Candee Colony Brooder
For Large Flocks of Chicks

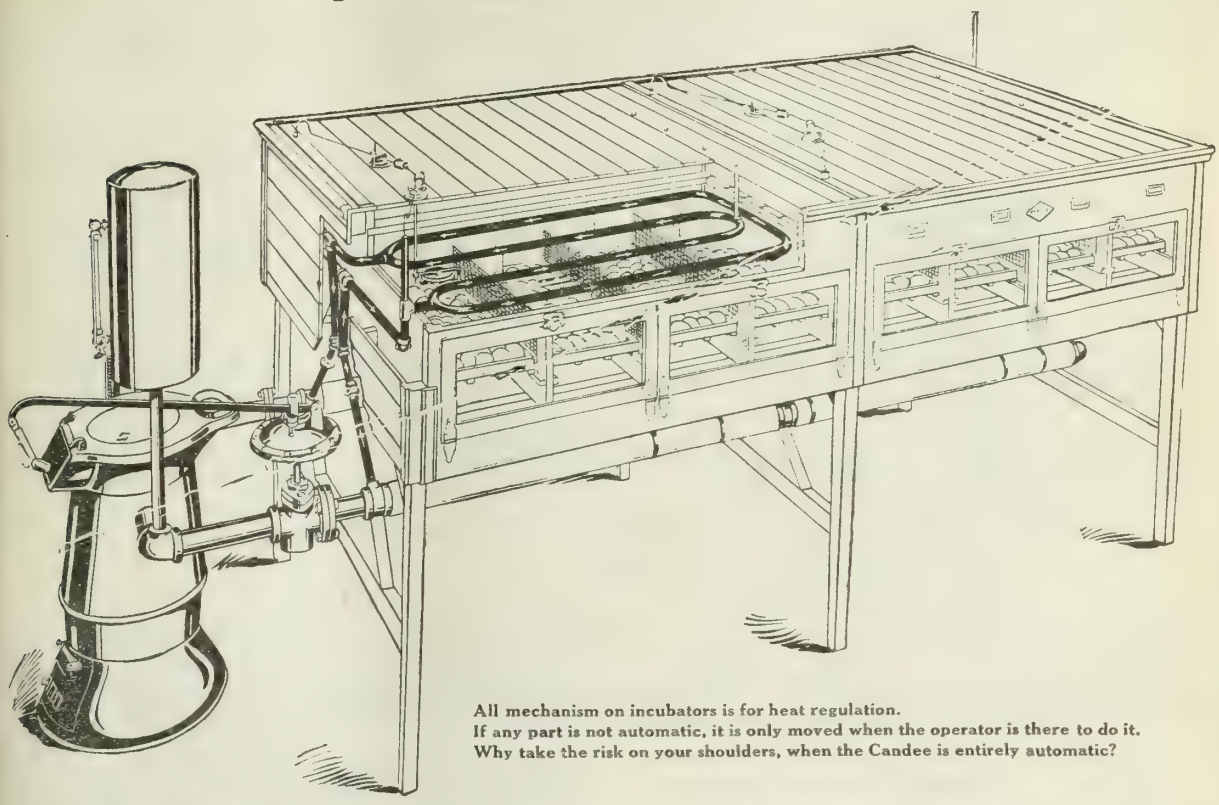
The Candee Colony Heater, of course, is constructed of cast iron; and of a special quality used for hot-air furnaces. Every part of it is made of this material which does not "crack," does not "burn out," does not "rust out," and that lasts a life-time.

Coal Fed Through Magazine A coal magazine that holds a good supply of fuel keeps the fire burning evenly and continuously.

The Largest Grate Its 12-inch grate insures the fire staying with the chicks in mild weather when they still require some heat, and also in the coldest kind of weather.

Dependable Regulator Its automatic regulator is practically frictionless in its operation and holds a correct temperature all the time. This regulator is equipped with the same large, reliable thermostat furnished with the Candee incubator.

Special Safety Feature The Candee is the only brooder which does not require opening the ash pit door to rake the fire. This means no chance for hot coals to fall on the floor or into the litter, and no chance for the building to catch fire.



Easy to Get to the Heater The Candee brooder does not require removal of the hover to attend the heater and to clean around it. A large section of its hover swings out of the way easily, quickly, noiselessly and without frightening the chicks.

Guarantee And it is sold on the broad proposition: "Write Your Own Money-Back Guarantee."

Write today for handsomely illustrated circular and learn why you will increase your profits this season rearing your chicks with the Candee colony brooder.

Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.

We have cut the Candee open so you can admire its simple automatic heat control

All mechanism on incubators is for heat regulation.
If any part is not automatic, it is only moved when the operator is there to do it.
Why take the risk on your shoulders, when the Candee is entirely automatic?

Each Setting Has Its Automatic Control

Candee Fills Your Wants—Take the machine, illustrated above, with its four 300-egg compartments. Fill one compartment today, another in four or five days, the third in five days more and the fourth still five days later. Then the first hatch is coming off. This divides the work and you have four or five days in which to get your 300 eggs for a compartment.

Automatic Heat Control—Each setting has its own thermostat just above the eggs and each setting gets just the heat it needs for the length of time the eggs have been in.

Study the Picture—The main heat supply from the coal heater is under the machine. It is piped separately to each compartment radiator. Just outside the compartment is a simple, packless valve, worked automatically by the thermostat over the eggs. If no heat is needed, the thermostat keeps the valve closed and the eggs cannot be overheated.

Each Setting Separate—Any hot water used by any compartment goes directly back to the heater to be reheated—not into any other compartment. This makes each compartment a genuinely separate incubator.

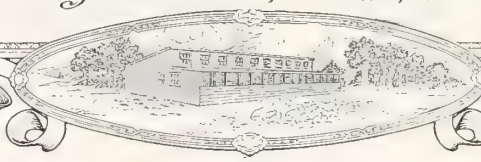
Built in Sections—The Candee is shipped-all-built with radiators in place. Simply set it up on its legs and couple to the main underneath. Add extra sections any time.

Does Away with Oil—Coal is many times cheaper as well as safer. One heater is cared for quicker than a lamp. Does not taint the eggs nor give off fumes.

Heat Evenly Diffused—With the Candee radiator, the healthy hot water is evenly diffused over the trays. Fill the compartment with thermometers, if you wish, and they will register alike.

What the Operator Does—Adjust the thermostat at the start of a hatch and seldom touches it during the whole hatch. Room or weather changes, or high winds make no difference. The operator only looks at his Candee when the eggs needs attention. The thermostats at all times protect the eggs.

As You Would Build It—A simple, practical, safe incubator—unchanged in principle from the first Candee. More in use than all other mammoths combined. Tried out in every climate and from coast to coast. Always so successful that we make the broad proposition: "Write your own Money Back Guarantee."



Quickly Pays for Itself—Use it for hatching baby chicks to sell to your neighbors and to do their hatching for them. Both are money-makers and bring you added revenue.

New Catalogue Just Out—The finest incubator catalogue ever issued—sent free. Just filled with facts as to what progressive poultrymen all over the country are doing. Hundreds of farms, East, West, North and South shown. Write today for your copy.

Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.

Pacific Coast Department

Conducted by H H Collier, Tacoma, Washington.

At the Chicago convention of the American Poultry Association I found a great big sentiment in favor of the organization meeting at San Francisco next year. The idea of the Pacific Coast poultrymen was to have the association meet at the time of the poultry show. This show will be held in November. In the executive meeting of the organization there was some difference of opinion as to the meeting. Those who have read the new constitution have learned that other than in emergencies the annual meeting will be held the second week in August. This is the week that has been selected by the poultryman for years. The executive committee finally recommended to the convention that in 1915 that the annual meeting be held any week after June 1. I cannot say that was the wording of the resolution, but it was words to that effect. The resolution was concurred in by the convention and it will be up to the members of the American Poultry Association to settle on the time and the place of the next annual meeting, and if I did not misjudge the sentiment at Chicago the next meeting will be held in San Francisco and the time will be in November, and we poultrymen of the coast promise a royal welcome to all who will come.

Talking with President Thompson and others about the trip, I invited all to take the northern route and visit Spokane, Tacoma, Seattle and Portland, Oregon, on their way out. I told Mr. Thompson that a special train could be arranged to start from Chicago, running through to San Francisco, stopping at the points named or any point of interest that the party might want to visit. At Mr. Thompson's suggestion, I took the matter up with the Chicago, Milwaukee & Puget Sound railway. I asked the agent here if such a special train could be gotten and how much of a party would be needed in order to have such a train and today I got my answer.

The Milwaukee will give a special train from Chicago to San Francisco, via the Northwest, with stopoffs at points of interest along the line, at a rate of $80.00 for the round trip. They will supply a full equipment of sleepers necessary to handle the party, a diner, observation and baggage car. On the baggage car they will print a good sign, giving the emblem of the American Poultry Association and telling what the train consists of. This train will be designated American Poultry Association "Special," and will be advertised all over the world.

In order to secure this train the members of the American Poultry Association will have to guarantee one hundred passengers and can have in their party two hundred passengers if they can

French's Poultry Mustard

The Original Poultry Mustard in America. Absolutely pure and prepared to produce most excellent results. Used and highly recommended by thousands of breeders, fanciers and practical poultrymen the world over.

Can Be Fed Any Time of the Year

Most satisfactory results have been obtained by its liberal and constant use. It stimulates and invigorates. It rebuilds and strengthens lost and waste tissues; It SHORTENS THE MOULTING PERIOD, and starts the hens laying. A fair trial will convince you of its worth. Avoid counterfeits and don't accept substitutes. Insist upon having **French's Poultry Mustard.** Buy it from your dealer, or send to us direct.

Our 32-page booklet giving Mr. Ralph Allen's experiments in England, together with other articles on Mustard and testimonials from prominent poultry raisers is sent free of charge for the asking. Write for this today. Address

The R. T. French Co. Department A **Rochester, N. Y.**

get that many to go on this special. A train like this would be one of the biggest things in the history of the American Poultry Association and would be seen by thousands of people. If the special is assured; the commercial bodies of Spokane, Seattle, Tacoma and Portland will entertain the party at each stop, giving them something to remember the rest of their lives. Our cities out here are alive to such things and if I can assure them that such a party will come, I know that none will ever regret their visit.

The special train will be run from Chicago to San Francisco without change of cars. At San Francisco the party will have any choice of route back home. They can go the Southern Pacific and visit New Orleans and Texas on their way home, or they can return via Salt Lake or Yellowstone Park. The Milwaukee railroad promises all kind of good things if the party should select their road and they say that anyone, it matters not whether they live in New York or Louisiana, can join the party at Chicago, provided that they see that their ticket reads over the Milwaukee and the northern route. In other words, Mr. Thompson himself could buy from New York to San Francisco over the special train.

I expect to be in San Francisco some time next spring and will look into the matter of accommodations in that city. A lot of people will without doubt stop in Oakland and go over to the city each day. Many of the people of the coast do that now, as Oakland is a most pleasant city in which to stop.

We are looking for a big attendance at the fair, despite the war, and the exposition will be one of the big things in history.

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Are the Greatest Achievement in Modern Barred Rock Breeding. They Are the Product of Over Thirty Years' Skill.

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Early Winning Show Birds

I now offer the finest early hatched exhibition birds I have ever produced—grand size and shape, fine heads, even clear blue color, and narrow clean cut vivid barring to the skin. They are matchless and ready to win prizes for you in any competition in the world. The prices are very reasonable.

My Imperial "Ringlet" Barred Rocks have demonstrated to all the world a distinctive superiority—they stand without a rival as the leading first prize winners at America's Imperial Show, Madison Square Garden, New York.

A Great Light on the Subject of New York Records

The Imperial "Ringlets," exhibited by me personally, have won at New York a grand total of **32 first prizes**—this is more than double the number ever won by any competitor—no other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the New York show—**mark the difference. Furthermore**—I am the only living Barred Rock breeder who has ever won all the regular and special prizes on pullets at a single New York Show, viz: **1st, 2d, 3d, 4th and 5th;** all the regular and special prizes on cockerels, viz: **1st, 2d, 3d, 4th and 5th** at one show; both Sweepstakes Champion Male and Sweepstakes Champion Female at one and the same show in Madison Square Garden.

These prizes mean something—they sweep away at one stroke all doubts and settle the question of the world's leadership.

(See my ad on back cover page for wonderful record at last winter's Madison Square Garden, 1913-14, Show. This achievement takes rank in history as the most wonderful ever recorded on Barred Rocks since the N. Y. Show was founded.)

If you want to win and breed winners you must have my Imperial "Ringlets"—the best is none too good for my customers. I will sell you grand exhibition birds for any show, and breeders of this richest first prize New York blood in elegant single birds, and trios and pens mated to produce winners.

Richly illustrated 70-page catalogue upon application—it is full of pictures of New York winners from life.

See my other ad on back cover page.

Address E. B. Thompson Lock Box 510, AMENIA, NEW YORK

The price of eggs in Seattle and Tacoma is now, October 12, 47 cents wholesale and eggs are very scarce. The hens on Puget Sound, owing to the extreme dry summer, have begun an early moult, in fact they will be earlier this season than I have known them to moult for years. We had 74 dry days this summer without rain, this dry weather started a lot of them to setting and they dropped their feathers very fast and all at once. I never saw them come out with a more even plumage. My Buff Rocks have the most even color in hens that I have had for years.

The Western Washington fair at Puyallup takes the banner this season for having the largest show in the state when it came to poultry. Puyallup is only eleven miles from Tacoma and Tacoma has about the best poultry association in the state. We have now near one hundred and seventy-five members. The Tacoma association gives its twenty-first annual show this season. The premium list is out for the Tacoma show and it contains a new wrinkle in this part of the country. A special class has been made for what is pleased to call a championship class. This class will be composed of the first, second and third prize winners of the shows held on and after August first. Washington has quite a bunch of fall fairs and a lot of early shows. These shows can nominate their winners in this class. An extra fee of one dollar per bird will be charged in the championship class and the money will be paid back in prizes of fifty per cent for first, thirty for second and twenty for third.

The dates for the Tacoma show are December 29 to January 2. Entries will close December 19. The premium list can be had by writing to James A. Caddey, Tacoma, Wash. W. S. Russell of Ottumwa, Iowa, will place the awards at Tacoma this year. Mr. Russell will make his home in San Francisco for the next few months. He has charge of the six months' display of poultry to be shown at the fair. He expects to have all of his entries in so as to be able to start that show in the early part of February. Many of the Northwest breeders will show a pen of birds with Mr. Russell and he expects to get a lot from the middle west and far east.

The Bantam men of the country are not at all satisfied with the Panama-Pacific Exposition's premium list as it discriminates against Bantams. One of the glaring things in this discrimination is the fact that it allows all varieties of standard bred poultry to exhibit on an equal plane except Bantams. The entry fee for each fowl is $1.50 and $5.00 is paid for first. Pens the entry fee is four dollars and ten dollars is paid for pens. The entry fee in Bantams is the same, but only $2.50 is paid for singles and only four dollars for pens. It is hardly fair to the Bantam men to ask them to pay four dollars entry fee on pens and only give four dollars for first premium. We hope that Mr. Lively, director of live stock, will see that the Bantam men's contention is right and raise the premiums on the beautiful little pets.

The state of Washington will duplicate all prizes won by the Washington poultry breeders. This will give the Washington winners ten dollars for first on cock, cockerel, hen and pullet and $20.00 for first pen. Washington will make a large exhibit and they hope to hold their own with the best that comes. You fellows who are afraid of distance must remember that the Washington birds must go nearly a thousand miles in order to reach San Francisco, and you poultrymen of the east and middle west will stand nearly as good show as we do in that respect. We want to see a large exhibit from the east, as we call everything east of the Rocky Mountains. We want to see New York and Illinois striving as hard to beat each other in San Francisco as they go at each other in Chicago and New York. If you come out and show better stuff than we raise here on the coast, you can sell it for enough profit to enable you to give your coops away, even if they are extra fancy ones that you provide for the special occasion.

Owing to the war, apples are very cheap out here and we have raised the largest crop for years. Washington Spitzenberg apples are about as good flavored as can be found anywhere. If it were not for the high express I would advise all of the poultrymen to buy their Christmas apples in Washington.

R. C. CALDWELL Box 1021, LYNDON, ROSS CO., OHIO

$1.06 A SQUARE FOOT—A BACK YARD PLANT.

BY H. L. SPOONER.

THE possibilities of a back yard poultry plant have been well demonstrated by E. W. Doak, of Delta County, Michigan. Mr. Doak is the commercial teacher in the local high school. Several years ago he became interested in poultry raising and by applying scientific methods has made an unprecedented success. In five and one half months he has cleared $1.06 a square foot from the land so used.

Mr. Doak's flock at present consists of eighty-five birds, there being twenty hens, one cock, and sixty-four young stock. They are all pure-bred White Wyandottes and are kept for three purposes—eggs, dressed meat, and breeding stock.

Partial view of Back Yard plant earning $1.06 a square foot.

In the five and a half months referred to, there were on an average 25 laying hens. These produced 2156 eggs worth 35 cents a dozen. 15 broilers were sold for $3, and one pen of six hens and a cock for $9. 214 chicks were raised, of which 138 were sold at twenty cents each when one day old. The banner egg month was March, in which 29 hens produced 519 eggs. All sales are made to private customers.

A variety of foods are used. They get whole oats, scratch food, dry mash, and green food daily. The dry mash consists of bran, ground oats, ground corn, beef scraps, alfalfa meal, and in winter, oil meal. The green food is usually lawn clippings in summer, and in winter mangels or rutabagas ground fine in a food chopper. In addition they get sprouted oats daily the year round. These are sprouted in a patent sprouter at a very low cost. They are fed all they will clean up. The food cost for the time mentioned was $30, including that fed to those on hand, and those sold.

Mr. Doak uses four 3x6 Philo coops and one 6x6 coop, an improvement on the Philo planned by himself. The coops are located in the back yard only a few feet from the house. Of the Philo coops, two are one story and the others two stories. In the two-story ones the lower story is used for scratching and has no floor. The sides are covered the whole length with one-inch poultry netting. A ladder reaches to the second story, up which the birds walk.

The second story has glass the whole length of the south side, the other side and ends being made of matched lumber. The roof is covered with roofing paper and is hinged so as to lift up. A tray, half of muslin and half of netting, covers the second story. The roof is kept open except in cold and stormy weather. The floor is covered with litter. A removable roost board is placed six inches above the floor. One nest is provided. A square hole for a ventilator is left in one end of each coop and covered with muslin summer and winter.

In 1912 Mr. Doak exhibited three pens at the Northern Michigan State Fair, receiving two first prizes and one second. In 1913 he also had three pens, receiving one first and two seconds. The cock which now heads the flock is a prize winner.

Mr. Doak cannot begin to supply the demand for eggs, dressed poultry, and day old chicks. His products have a good local reputation and their fame is spreading. He is recognized as an authority on poultry raising in his community and is frequently called on to talk at farmers' meetings. He says there are no secrets in the business, only an intelligent application of scientific methods.

White Wyandotte pullet laying at 5 months, 5 days old.

———o———

Frank E. Foy, who recently sold his poultry ranch near Des Moines, Iowa, for $75,000, according to report, has bought a piece of land at Lyons, Iowa, and will establish another ranch.

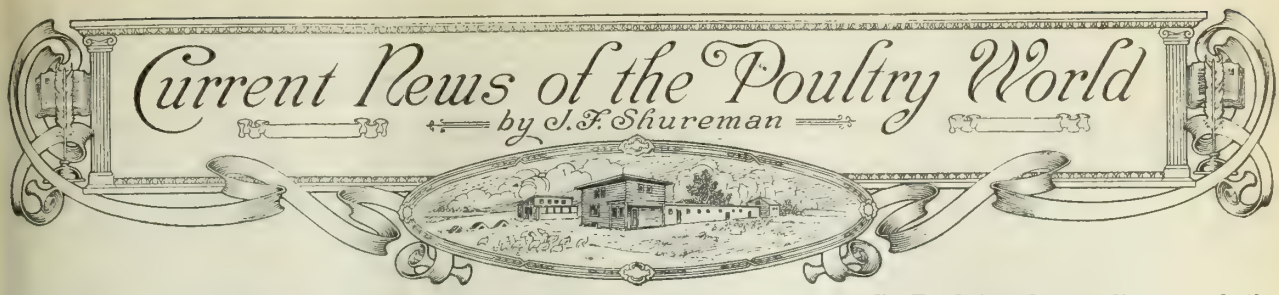
Grand exhibition birds ready to win for you at late fairs and early winter shows. My birds have a record that is unbeatable. They have proven their quality and won highest awards and honors over all. **Remember this Champion Line** made its best records at America's Greatest Show, **Madison Sq. Garden, N. Y. They are now better than ever.** We have a great line of stock to select and fill orders with. They have the best of breeding quality and will give absolute satisfaction, also have some excellent utility stock for sale at reasonable prices. Write for my **Special Sales List of Stock.**

WEBSTER FARM Box A GIRARD, PENN.



LICHTENWALTER'S QUALITY **Buff Plymouth Rocks**

For years they have won at the prominent shows, East and West, more prizes than any other line. They have the quality to win and to breed winners. Let me know your wants—I can please you in show birds or utility stock. Circular for the asking.

E. A. LICHTENWALTER Box A GIRARD, PENN.

A winning Buff Orpington pen that assisted in developing Byers Strain Orpingtons to their present recognized high standard of quality. Mr. Byers advises us that he is richly stocked in big finished birds for the early shows and early breeding. He has been a successful Orpington Specialist fifteen years. Address C. S. Byers, Hazelrigg, Indiana. Retouched Photo.

The value of the annual egg output of the state of Iowa is reported as $21,000,000. This is more than the annual output of the gold mines of Alaska. The poultry and egg crop of Iowa for a single year would buy 64,000 automobiles at $600 each, or an automobile for eac' thirty-four people in the state.

E. D. Powers, of Danville, Ill., claims to have perfected a strain of quackless ducks—or, perhaps, they might be called gobbleless turkeys. According to Mr. Powers, they are a cross between a duck and a turkey. The plumage of the male bird resembles that of a bronze turkey, while the plumage of the female resembles that of a duck. Both birds have duck bills that are narrow and ending in a sort of "snout" that is something new. They have web feet. The male bird is very large with long legs, while the female is smaller with short legs. They make efforts to quack, but can not make a noise. Next!

Of 12,000 ducks that had been hatched on the Huey Poultry Farm, near Vineland, N. J., 8,000 died within three days recently and no cause could be found. The theory is that a carload of feed had been fumigated in New York, before shipment, and that the chemicals used were responsible for the death of the ducks.

A Plymouth Rock hen belonging to John E. Wright, a farmer living near Sharpsville, Pa., lays eggs with tails about three-quarters of an inch long and as thick as a lead pencil. There is no shell on the tail part, it being covered with skin similar to that inside the egg.

Seventeen-year locusts have appeared in Ohio, coming out of the ground in great numbers. Turkey growers and poultrymen generally have found that there is nothing better for fattening fowls, and especially for the growing poults, and little other feed is being furnished the flocks in some parts of Ohio.

It is estimated that more than 250,000 roosters were marketed in Missouri on "Rooster Day," June 6. T. E. Quinsenberry, director of the State Experiment Station at Mountain Grove, estimates that the elimination of the male birds from the flocks of the state will mean an additional profit of from $1,000,000 to $3,000,000 for the farmers and poultrymen of the state because of the infertility of the eggs and its consequent better keeping qualities.

John Schmelzer, who for some time has been extensively engaged in the poultry business near Grand Rapids, Mich., has purchased a farm near Saginaw and will establish thereon the largest poultry plant in Michigan and one of the largest in the United States. It will be known as the Lily White Poultry Farm and 10,000 laying hens will be kept the year around, all S. C. White Leghorns.

The Tennessee State Fair can now boast of one of the best poultry exhibition buildings in the country. It is 250 feet long by 60 feet wide and is well lighted and ventilated. There are 135 permanent pens large enough to accommodate five birds each, and

A Record Unequalled

We have been telling you all season, we had more and better quality birds to sell this season than ever before. As a positive proof of this fact, our winnings at the recent **Great Cleveland, Iowa State, Michigan State and Indiana State Fairs** has been such that it has startled the Poultry Fraternity as never has such a record been equaled.

the regulation wire coops will be arranged down the center of the building. In the center is a large cement pool and fountain, which will accommodate a large number of ducks and other water fowl. The building is ready for the big fair to be held the coming fall.

South Carolina is to have an up-to-date poultry plant at its Agricultural and Mechanical College and will also have extension work in poultry. At a recent meeting the board of trustees of Clemson College created a poultry husbandry branch of the division of animal husbandry and appointed Frank C. Hare to teach poultry husbandry and look after the extension work. For some time Mr. Hare, who is one of the best known poultrymen in the country, has been junior animal husbandman in the United States Bureau of Animal Husbandry at Washington. He is an expert poultryman and will make good in his new position.

Muskogee, Okla., is to have a new poultry magazine to be known as the "Poultry Breeder." A company has been organized with a capital stock of $10,000 to promote the magazine, the incorporators being John D. Benedict, S. J. Anderson and C. J. Koepke, all of Muskogee.

Charles H. Shick, a wealthy poultry fancier of Burlington, Iowa, went to St. Louis the last week in May to purchase some fowls and has not been seen or heard from since. It is feared that he has met with foul play.

J. F. Root, who started into the poultry business at Grand Rapids, Mich., nine years ago without a dollar and who has been remarkably successful, has been engaged to take charge of the extensive poultry farm being established near Saginaw, Mich., by John Schmelzer, at a salary of $5,000 a year and a share of the profits of the farm.

The members of the State Association of Poultry Shows, recently launched in North Carolina, held a meeting in Greensboro in July and perfected the organization by adopting a constitution and by-laws and electing officers for the coming year as follows: President, Walter R. Byford, of Charlotte; vice-president, C. E. Coltran, of Greensboro; secretary-treasurer, J. T. Bland, of Raleigh. The primary objects of the association, as stated in the constitution, are to promote greater co-operation among the poultry associations of the state, to facilitate the purchasing of show-room supplies, and to arrange a satisfactory schedule of dates for the exhibitions so they will not conflict.

Seven "crazy" chickens on the poultry farm of David Clark, near Seymour, Ind., have been attracting considerable attention because of their queer antics. Their condition is due to an electrical shock received during a recent storm. They run around in circles, jump fences

A Better Brooder

FOR BIG FLOCKS

If you keep a flock of 250 to 1000 or more chicks you ought to know about the Prairie State Stove Brooder. It is adapted alike to the individual Colony House or to the long continuous house so extensively used on large farms. As evidence of its recognized superiority and dependability, we cite the fact that 40 of these stove brooders are already

Used on the Largest Poultry Farm in the U.S.

where they care for 25,000 chicks at one time. We shall be glad to give anyone interested more detailed information about the equipment of this farm. Prairie State Stove Brooders are substantial, serviceable, safe, economical and efficient. The stove is made of cast iron throughout with galvanized steel hinged canopy and hover curtain attached. It is automatically regulated—fire never goes out. Easy to operate—simply lift one-half of hinged canopy and pour coal in hopper. Consumes 7c worth of hard coal a day in average weather. Price complete, $30. Write for booklet. Also ask us to send you our Complete Catalog of Prairie State Incubators, Hovers and Colony Houses designed for every requirement and every purse.

and pull off all kinds of "crazy" stunts, and if they keep on they will run themselves to death. They were in a coop under a tree that was hit by lightning. Twenty-eight were killed instantly.

Felix Brunot, a prominent poultryman living near Greensburg, Pa., claims that he has a flock of Plymouth Rock hens that lay eggs different from the ordinary eggs in that it takes them four weeks to hatch instead of three.

Ralph S. Connell, the "poultry king" of Tularosa, N. M., was shot from ambush and killed one day recently while riding along the road. Mr. Connell had a large poultry ranch near Tularosa.

The importation of Chinese eggs into the state of California is imperiling the egg industry, and Governor Hiram Johnson has set about to discuss the situation with the state officials and attorneys of the various poultry associations in the hope that some definite plan may be reached to conserve and protect a prosperous and important industry in California, now seriously threatened, and bringing the poultrymen of the state an annual revenue of $10,000,000. Governor Johnson will seek the co-operation of Governor West, of Oregon, and Governor Lister, of Washington.

Helena, Mont., is to have one of the largest poultry farms in the Northwest, to be located a short distance from the city. R. E. Alexander, of Helena, is back of the project and the buildings are already under way. Everything will be modern and egg production will be made a specialty.

Northern Kentucky farmers are waking up to the possibilities of intelligent poultry culture and a concerted effort is to be made to increase the poultry and egg production of that section of the state, and in fact the entire state. In 1909, according to the last Federal census, there were 8,000,000 chickens in Kentucky, with an estimated value of $4,000,000. These chickens produced $7,000,000 worth of eggs during the year 1909. An effort is to be made to increase the number of chickens and the egg production at least 50 per cent by December 31, 1915.

The ostrich farm established three years ago near El Paso, Texas, is proving a success and its promoters are well pleased with their venture. The long-legged birds have multiplied rapidly and a large quantity of beautiful and valuable feathers have been produced and shipped to the Eastern markets.

A report from Kentucky says that the turkey crop of the Bluegrass region is the largest and best for many years, on account not only of the dry weather of the early summer but also because the farmers have found turkeys to pay so well that many more are raised than ever before.

On August 31 John R. Calhoun, of Knoxville, Tenn., received a gift from his father, Dr. J. P. Calhoun, pastor of a Presbyterian church in Knoxville, in the shape of a title to what is reported to be the largest and most modern poultry farm in eastern Tennessee. It is the Woodland Poultry Farm,

Pittsburgh Steel Co., Pittsburgh, Pa.

New York Chicago Duluth St. Louis Memphis Dallas

known as "the Eckel Egg Farm," and is located near Morristown, Tenn. The elder Mr. Calhoun purchased the farm and presented it to his son that the young man might spend his time out of doors, his health requiring outdoor life. Fred D. Smith, who has successfully managed the farm for several years, will remain with Mr. Calhoun as superintendent.

There is a prospect that H. A. Nourse, of St. Paul, and others may start an incubator factory at St. Peter, Minn., for the manufacture of a new type incubator invented and patented by Mr. Nourse. An effort is being made to start a stock company.

"*Poultry Pointers*," a monthly publication devoted to poultry raising and for seven years published at Kalamazoo, Mich., has been sold by the proprietors, W. L. Losinger and R. C. Saunders, to the publishers of the Grand Rapids News, and hereafter the magazine will be issued from the News office. Mr. Saunders will remain with the publication as business manager.

Mrs. Clara Colwell, of Smith Center, Kan., furnishes a good illustration of what may be done in poultry raising on a five-acre tract. She makes a specialty of selling baby chicks and during the past season sold and shipped 13,000 of the little fellows to almost every section of the country. She is a widow with two small children, does all the work herself and makes more clear money annually than do many men who work twice as hard.

John D. Rockefeller has recently donated $1,000,000 additional to the Rockefeller Institute for Medical Research for a department of animal pathology. The work will be under the direction of Dr. Thebald Smith and special attention will be given to the study of poultry diseases, their causes and cures.

Joe Hilldorfer, the well-known poultryman of Pittsburgh, Pa., has just completed four new 100-foot laying houses and expects to take care of 4,000 laying hens the coming winter. This will give Mr. Hilldorfer one of the largest egg farms in the state. George Norman, late of England, is managing the farm and is said to be one of the most capable poultrymen in this country.

Lee Whitehead has sold his famous poultry farm at Mt. Pinson, Ala., to a Mr. H. M. Horton and others for $25,000 cash. The farm has limited acreage, but the buildings and equipment are said to be the most modern, most expensive and most complete in the state.

In a section of New York state extensive plans are being made to develop the poultry interests through the cooperation of the rural schools, the Ithaca Business Men's Association and the New York State College of Agriculture. A course of poultry lectures is to be given in thirty-five or more centrally located places within a radius of thirty miles of Ithaca. Boys and girls and their parents are to be invited to assemble and listen to the lectures.

Francis O. Megargee, a poultryman of world-wide fame, died at his home at

Dunmore, Pa., early in September. Mr. Megargee, who was fifty-two years of age, had been in the paper manufacturing business all his life. Poultry culture was his pet hobby and birds of his breeding won scores of blue ribbons at shows throughout the country. "Lady Washington," the $12,000 Black Orpington hen, that created a sensation in the poultry world a few years ago, was owned by Mr. Megargee. He was a busy man, but never too busy to take a few minutes to "talk chicken."

Miss Virginia Pearl Moore, state agent for Tennessee for girls' poultry clubs, states that she will not accept the appointment as state agent for the states of Maine and New Hampshire, but will continue her work in Tennessee. Her headquarters have been removed from Nashville to the University of Tennessee.

Miss Sophia Pitchlynn, the Choctaw Indian princess, who for a number of years has made her home in Washington, D. C., and who has gained world-wide fame as a breeder of S. C. Brown Leghorns, is going to devote the balance of her life to the work of teaching Indian children to raise chickens. Her plan is to take her entire flock to Oklahoma and start a school near Ardmore, giving the Indian children, and older people as well, instruction in poultry culture. Miss Pitchlynn is a daughter of Peter P. Pitchlynn, a chief of the Choctaws, who headed the first expedition which left Mississippi and went to dwell in what is now Oklahoma. For years he ruled his people. He was an intimate friend of General Grant and his political duties took him to Washington often. After his death the two children, Sophia and Lee, made their home in Washington. After years spent at the national capital, Princess Sophia will now return to Oklahoma to instruct her people in poultry culture.

Nine poultry journals, formerly published in different Southern states, have been consolidated and will be published as one paper at Louisville, Ky., by the Blair-Young Publishing Company. The name of the magazine will be "*The Industrious Hen*," that being the name of the oldest of the nine consolidated papers.

The season is here when we should do some very close culling. Anything that shows any serious defects should be discarded, and give the feed and room that they occupy to the better quality birds. It surely don't pay to keep a lot of culls around and feed all fall. Get rid of them.

IMPORTANT.

In answering advertisements our subscribers should take particular pains to write their names and addresses plainly and make it plain just what way they desire their goods shipped. This will prevent delays, errors and misunderstandings. In all cases please mention American Poultry Journal.

RED COMB POULTRY FEED
To Make Your Flock Pay
FIVE great poultry experts, Quisenberry, Linton, Purvis, Horner and Heck—have just written a book for us. Each one handles a special subject. The book treats of the feeding of poultry for every purpose—egg production, the development of chickens for market or the show. The book cost us a considerable sum. But we will send it free for your name on a postal.
Book shows money making advantage of feeding a *scientifically* balanced ration—tells you about Red Comb Meat Mash, the great egg maker. Red Comb chick feeds and Red Comb Poultry Feeds. Red Comb is not a by-product. It is ground of the finest quality whole grains and mixed by experts. Yet you can buy Red Comb cheaper than you can buy and mix the materials yourself. Ask the Red Comb dealer in your community.

Chick Chats

by H. P. Schwab

If this glorious weather lasts, the country will be beautiful in November.

* * *

Fall shows are over and, without exception, we believe they were larger and more successful than ever before. Old birds were noted in good feather, and the young fully matured and of select quality.

* * *

Now for the Winter shows, beginning with Williamsport, Pa., Nov. 16-21, and ending with the great Madison Square Garden, New York, show, Feb. 12th to 17th, gives a well-spread season and an opportunity for all.

* * *

Nothing succeeds like success, and if you wish to have success show your birds. To exhibit your stock is the start in the career of every breeder; all have traveled that road and the sooner you get on the way the quicker you will arrive, if success is in you.

* * *

The Greater Buffalo show to be held Nov. 23d to 28th will be the one and only Buffalo show this year, with Mr. W. C. Denny as secretary. This will be one of the exhibits that should be on your list.

* * *

Then comes the Palace New York show on Dec. 1st to 5th, with Mr. L. D. Howell, Mineola, N. Y., secretary. This will, no doubt, be one of the greatest shows ever held, for this year they will have two floors, the upper one devoted entirely to utility and practical displays. Their list of judges is a long and very good one.

* * *

The New York Garden show, Boston, Chicago, Pittsburg, Indianapolis, Philadelphia, Baltimore, etc., are fixtures, with dates announced. The breeder has a long list to select from.

* * *

Pumpkin Time.

How the autumn leaves are falling
And the chilling breezes blow,
And the clouds that sail above us
Tell of ice and sleet and snow;
Yet the children all are happy,
Singing many a cheery rhyme,—
Need you ask of me the reason?
Boys and girls, 'tis pumpkin time!

Here they come with song and laughter,
Merry elves with face aglow!
Each one, from small, chubby fingers,
Swings a pumpkin to and fro.
As you look across the corn-field,
Smiling fairies may be seen;—
Need you ask of me the reason?
Boys and girls, 'tis Hallowe'en!

* * *

The judges' licensing question will not down. By this time it must be evident that it is not settled right. Our proposition for the judges to organize a strong association of their own has met with some favor, and I have been asked to announce a call for a meeting at the Palace New York show on Wednesday, Dec. 2nd, at 4 p. m.

* * *

The "Order of the Flea" will also have a meeting at this show at 8 p. m. on Dec. 2nd, when the three new degrees will be worked for the first time on Brother Herman Schemmerhorn.

Boys, you are all wrong; you, Billy and John, and even the Doctor and Drev, for there is nothing serious in the air that I know of. Most of you fellows are too serious all the time, so I just poke a little light stuff on you and the readers to push away the gloom. You may bet that these Chats are not the last thing read in the A. P. J., either.

* * *

From now until late in the spring we expect to be on the road most of the time making the shows and visiting poultrymen and their plants. If we can serve you in any way, please write and tell us and we will try and arrange for an early call.

* * *

The Ontario Winter Provincial Fair will be held at Guelph, Ont., December 5 to 10, 1914. This is the big winter show of Canada to which we have often referred. It is a great show, worthy of Canada, and we would like to see more of our American breeders exhibiting there. The judges are: All Plymouth Rocks except White and all R. I. Reds, H. P. Schwab; White Wyandottes, Orpingtons and Anconas, Richard Oke; all other Wyandottes, James Tucker; Leghorns, Geo. Henderson; Brahmas, Houdans, Minorcas and White Rocks, George Robinson; Cochins, Langshans, Javas, etc., Joseph Bennett; Hamburgs, Campines, etc., Wm. McNeil; Games and Game Bantams, W. C. Baldwin; Polish, Turkeys and Water fowl, L. G. Jarvis; Ornamentals, William Barber.

SCHWAB'S NONPAREIL **BARRED PLYMOUTH ROCKS**

Line Bred Since 1883 — **Winners at America's Leading Shows Since 1885**

Extraordinary Reduction Sale of Stock and Eggs

EGGS FROM GRANDEST MATINGS

Now at $3.00 per setting, $5.00 for two settings or five settings for $10. Our Descriptive Mating List tells all about every mating we have. Send for it. Our Latest Win at the New York Palace Show, December, 1913

We won with 213 birds competing of the usual **New York Quality: First Prize Hen and Sweepstake Championship, Special Medal for Best Hen in the Entire Show,** Special for Best Shaped Female, Special for **Best Female in American class, Second Cock, Second Cockerel,** Fifth Pullet, **Special First** Pullet-Bred Pen, **Special Second Cockerel-Bred** Pen, Special Second Pullet-Bred Cock and Third Cockerel, Special First Cockerel-bred Hen, Special First Cockerel-bred Pullet, **Spratt's Silver Cup** for Best Exhibit, Special champion female, etc.

SCHWAB BROS., Box 451, IRONDEQUOIT, N. Y.

The poultry department of the Trenton Fair was a delight to all exhibitors and visitors. Grand quality was seen beautifully displayed. The classes of White Rocks, White Wyandottes, Reds, Leghorns, etc., were large and strong, with birds well shown. Superintendent Harvey E. Rogers deserves great credit, and we hope the management will give him a new and larger building for the future. This should be one of our greatest early shows. The location is ideal, and Mr. Rogers can make it one of the very best if given the opportunity.

* * *

We were particularly pleased to meet Scotty Bowers at Allentown. There is but one of this kind now in captivity and he promises things for the great Hagerstown show.

* * *

Maiden—What sort of a hat did Genevieve Gotham wear?

Man—A simple thing—just a gardenia in front and a gol-darn-yer behind.

* * *

Deacon Hewes has been pretty good of late; in fact, ever since the A. P. A. meeting. What means this?

* * *

President J. C. Punderford, of the Certified Farms Company, New York, has been displaying his foods and incubators, etc., at the various fairs, and reports a heavy demand for their goods.

* * *

The poultry business is looming up fine and evidently a good season is ahead. The demand for good stock never was better, nor was the stock any better than is to be had this season. Confidence in the business is what helps and will make good.

* * *

Just now the eyes of the poultry world are on Williamsport, Pa., for this show will after judging day open its doors free to the public and invite them to enter and to inspect its exhibit, which for years has been the big early show of the seasons. They have introduced many features in the past, but this one looks particularly good and assures a record attendance, which should make it a better selling show than ever.

* * *

They are still at it in Europe seven days of the week, while Peace Sunday was observed all over the world except where its observance was most needed.

* * *

Teacher—Johnny, what is the name of the city where peace is promoted?

Johnny—Reno, ma'am.

* * *

Have just arrived at Hagerstown Fair, which is the "greatest ever," with 7,579 birds shown. This surpasses all former records. The great building is almost filled to capacity and at this rate of increase a new addition will soon be needed. The entries are from all sections of the country, the quality evidently very good, classes well balanced, and all is intense interest as the judges are working.

* * *

Hagerstown promises to have a catalogue of entries next year, sure. Not having one now will delay our report until next month.

* * *

Scotty the "Prince" is on hand making everybody happy and working overtime.

WYSOCKI'S SILVER CAMPINES

MRS. J. WYSOCKI 431 LaFayette St., AURORA, ILL.

HOUDANS

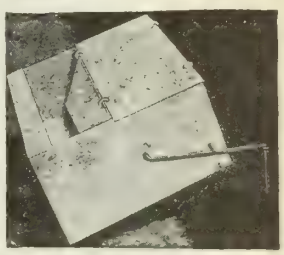
BLUE HEN POULTRY FEEDERS MAKE MONEY FOR YOU



$1.50 at dealers or delivered prepaid

If you are not using BLUE HEN automatic grain feeders and non-clogging dry mash hoppers, you are wasting valuable time and lowering the efficiency of your layers. It isn't necessary to feed your birds three or four times each day. Use automatic feeders and fill them once a week, thus saving much time and increasing your egg yield. *Proof! The highest laying competition records have been made under this plan of feeding.*

BLUE HEN Automatic Feeders and Mash Hoppers are new in principle and infallible in action. They have large capacity, are carefully made, *guaranteed to give perfect satisfaction* and sold at a price you can afford to pay. $1.50 each, at your dealers or delivered by us.

Full information on request. We will show you how to secure greater returns from your flock, regardless of its size.

Place your order today. Cut your expenses; increase your income. Let *results* convince you.

"YOUR MONEY BACK IF YOU WANT IT"

This is the guarantee behind all BLUE HEN products. Demand poultry equipment and supplies bearing the BLUE HEN trademark. BLUE HEN Colony Brooders, Mammoth Incubators, Mash Hoppers, Automatic Feeders, Nursery Chick Food and Remedies will never fail you. Our money-back guarantee protects you absolutely.

BLUE HEN TRADE MARK

We will gladly send you our complete catalog, and will include—without charge—our new poultry textbook, "The Handbook of Brooding". The latter is the most practical and helpful thing of its kind. Better ask for your copy at once!

WATSON MANUFACTURING CO.

Drawer 21 Lancaster, Penna.

The poultrymen's banquet was the largest ever held here. Unusual honors were paid Hon. G. O. Brown and Wm. B. Atherton by seating them with the ladies at their request.

* * *

The orators were limited to three-minute talks and many were heard to advantage, while one editor transgressed and purloined twelve minutes, much to the discomfiture of those present.

* * *

Mr. Len Rawnsley, of the Rawnsley-Shields Co., Columbus, O., won with his first prize Buff Orpington cockerel the sweepstake cup for best male at the show, a deserving honor to a most magnificent specimen.

* * *

The Philadelphia, Pa., Poultry Show will be held Dec. 15th to 19th, with the prospects better than ever for a big and successful exhibit. For all particulars address F. E. Gilbert, secretary, 603 Lippincott Building, Philadelphia, Pa.

* * *

The loss sustained by John W. Ward, Jr., Pennington, N. J., by having his string of Dark Cornish suffocated on their way to the Allentown fair is most irreparable. Careless handling and crowding of coops in express cars has caused the loss of many valuable birds in the past, but none more valuable or regretted than this. Won't these common carriers ever learn?

Drinking Fountains

Protect your fowls from their own contamination and supply them with fresh, pure water at all times. We have these fountains in all sizes. Prices, from 15 cents for quart size to $2.25 for 4-gallon size. Sold under positive guarantee of money refunded if not satisfied. Send for catalogue today.

Watson E. Coleman, Patent Lawyer, 622 F St., N. W., Washington, D. C.

A Purpose and a Promise

The Purpose:

Your success in the poultry industry is almost wholly dependent upon economical buying. We have established "The Poultryman's Exchange" with but one purpose in view. We will supply poultry breeders everywhere with the best obtainable feeds, equipment, appliances, breeding stock, day-old chicks, eggs for hatching, and, in fact, everything required by any poultry breeder, at the lowest possible price, quality considered.

The Promise:

A Square Deal

Our organization consists of some of the foremost poultrymen in the country. Men who have made success for themselves, who know the best for every need, and who are ready to back their judgment with their reputations. We have an iron-clad guarantee which goes with every order, large or small. We are proud of our organization and the goods we sell. We have some interesting literature for you. Write for it, telling us in what you are interested.

(formerly with Hall Mammoth Incubator Co.)

The Cheapest and Most Useful Green Feed.

That green food should be supplied as a regular article of diet to fowls during the fall and winter months, when they are not able to secure it for themselves, seems to be not yet realized by a great many poultry raisers. We all know that the fowls enjoy the best of health and are most productive during the spring and summer months when plenty of green stuff is available. In other words, to secure the greatest benefits from our flocks during the cold months is to provide for them as nearly as possible spring feeding conditions.

Now, let us see how we can best secure these conditions for our hens.

In the first place, the fowls should be housed as comfortably as possible, keeping them free from any drafts during the night, and protect them as much as possible from the cold north winds. By all means keep the hens out of the snow during intense cold weather nor let them wade around in slushy, snow-covered puddles. Hens with frost-bitten or cold feet will not lay. A scratching pen in which the floor is well covered with dried leaves, straw or wheat chaffing, where the fowls can exercise during very cold and damp days, is the best protection from cold weather. On such cold days be sure and have the chill from the drinking water removed. Grit, charcoal and shells should, of course, not be overlooked. Feed wheat in the morning and half wheat and half corn in the evening.

Last, but not least, some green stuff must be given them for best results. There is no better green feed than sprouted oats. It can be produced at the lowest cost with the help of an oat sprouter, which you find advertised in this journal. These machines require little attention, are clean to handle and can be operated anywhere in the house. Such a sprouter, especially the metal one, will last for many years.

The sprouted or predigested grain is not only of the utmost advantage in maintaining the hens' health, but the succulent sweet sprouts, having also absorbed the strength and nourishment of the grain, are also very conducive to the increased production of eggs, and that at a time when eggs are highest in price. When given liberally the feeding of solid grain can be reduced, and thereby greatly reducing the cost of feeding, a point not to be disregarded; especially by those who have to buy all their grain.

So remember, that if you want eggs feed green stuff, and for green feed there is nothing better and cheaper than sprouted oats.

After you read the editorial "Give Us Your Ideas" don't put it off but write at once.

MECHANICAL INJURY CAUSES GREAT LOSS TO EGG INDUSTRY.

MECHANICAL injury to eggs, due to rough handling, causes a great loss to the egg industry every year, as well as a food loss to the consumers. Eggs that are completely wrecked (and termed "mashed," in commerce) are not only worthless themselves but they soil a number of eggs, otherwise good. When the shell is so broken that the contents are escaping the egg is termed a "leaker."

Another class of eggs which have a technical term applied to them because of mechanical injury are the "checks." "Checks" are eggs, the membranes of which are intact but with cracked shells. The egg industry has to contend with an enormous number of these. If the crack or defect is visible only when the egg is held before a candle or when it is gently tapped against another sound egg it is called a "blind check." This tapping of one egg against another is called "clicking" by the egg men.

"Leakers" are thrown out at every stage of handling. The country merchant usually throws them away when he discovers them, as do the egg peddler and the city retailer. They therefore constitute a total loss. "Checks" are sure to rot quickly when on the market, for they are ready prey for any mold or germs that may chance to fall into the crack. They are usually disposed of as soon as possible and are likely to be found in greater numbers in markets near a section producing eggs. If found at a distance from a producing section a cracked egg is more than likely to be of very low quality. However, there are plenty of "checks" which are fresh and above reproach except for the damaged shell, but they must be handled carefully and rushed to the consumer as quickly as possible.

The egg with a dirty shell is one of the most objectionable factors of the egg industry. However, it must be remembered that outer filth is not conclusive evidence that the contents of the eggs are infected. Of course if eggs have shells that are cracked as well as dirty they may well be regarded with suspicion.

The great drawback in the case of dirty-shell eggs is that they bring a lower price in the market although the egg may be large and its contents fresh. Eggs with dirty shells do not store well. They are, therefore, not available for holding when the surplus production is great and when the market can secure more "clean" eggs than it needs. Often they scarcely pay the expense of marketing.

When shells are stained, as well as dirty, there is an indication that water as well as filth has come in contact with the egg shell, and such eggs when stale are often infested with bacteria that have gone through the pores of the shell. Stains can not usually be washed off. Eggs that are to be kept should never be washed, as water will remove the natural coating that protects the contents of the egg.

The highest percentage of dirty-shell eggs occurs during wet spring weather. Since they do not keep well a large number find their way to egg-breaking establishments, as do the cracked eggs that are termed "checks."

The egg dealer encounters enough unfavorable conditions resulting from bad weather without those that result from rough handling and mechanical injury. When warm weather prevails eggs go stale and many of them show what is termed "heat." This means that the yolk rises in the shell and is flattened, and the white becomes thinner than normal, while the air space in the egg increases in size. In the fertile egg the change goes further, for the egg begins to hatch.

What the commercial trade terms a "weak" egg or a "watery egg" is merely a stale one which has usually suffered rough handling. The result is that the white is frequently thin and the membrane lining of the egg proper has become so loosened that the latter rattles around loosely when the egg is turned. In the late summer and autumn when the hens are not laying, and country merchants are withholding stocks for high prices in the future, such eggs form a very large proportion of the current receipts of the city market.

S. C. WHITE LEGHORNS

Selected breeding cockerels and cocks, $1.50, $2 and $3. Laying pullets, $1.50 and $1.75. LAYING BRED.

SUNSWICK POULTRY FARM, Rufus Delafield. Owner, **Box J, So. Plainfield, N. J.**

Wilburtha POULTRY FARMS

Announcement

Mr. Charles J. Fisk, owner, announces the following new managership of Wilburtha Poultry Farms:

General Supt., Mr. Geo. Kerr, formerly Superintendent of Dune Alpin Farm, East Hampton, Long Island. As a breeder of Leghorns, Mr. Kerr has no peer. He is to take personal charge of the prize-winning S. C. White and Buff Leghorns at Wilburtha and the entire lot of prize winners which he brought with him from Dune Alpin.

Specialist on Columbian Plymouth Rocks and Columbian Wyandottes, Mr. D. G. Keyler, formerly with Mr. C. D. Cleveland, Sunnybrook Farm, Eatontown, N. J. Mr. Keyler enjoys a national reputation with these breeds, and his taking charge of our birds, with their great records at the biggest shows, bodes a tremendous future for Wilburtha.

Incubating and Brooding—in charge of Mr. Thos. Lockwood, formerly Superintendent Monmouth Farms, Freneau, N. J. He has been highly successful in this line. With the very best equipment and the very best man obtainable, we can promise our customers a custom hatching service that can't be equalled.

Wilburtha's ever increasing winnings at the Palace, Madison Square Garden, and other big shows, are thus to be utilized for still greater achievement. We are positive that no better management exists or could exist than we now have, and Wilburtha's splendid record for giving the best that money can buy and for fair and honest dealing, will now be guarded with redoubled vigor. If you are now, or will be, in the market for breeders, utility birds, chicks or eggs, table eggs or broilers, Wilburtha strains of Columbian Plymouth Rocks, Columbian Wyandottes, and S. C. Buff and White Leghorns, will furnish you the best there are in the world.

An additional announcement is that concerning our beautiful new catalog, about to be issued. Send in your name for a copy, *today*.

Every Poultry Raiser Needs

TOM BARRON'S OWN BOOK

Tom Barron is the world's greatest breeder of heavy-laying hens. His birds have consistently won leading honors in public egg-laying competitions in America, England and Australia, making wonderful records. No other breeder has ever succeeded in producing such a large proportion of

200-Egg Hens

In his new book, written by himself, and fully illustrated, he tells in his own words just how he breeds, rears, houses, feeds and conditions his marvelous layers. Every poultryman needs this great book NOW, in order to learn how to get more eggs and bigger profits. It tells fully and plainly the whole secret of Barron's great success and how **you** can secure the same results.

Price, $1, by mail. Order today.

Must have warm water in the winter

This fountain will warm the water and keep the grain warm, it also will keep the frost out of a small sized hen house. We have FIRELESS FOUNTAINS that keep the water warm without a lamp. get our FREE BOOK HOW TO GET EGGS IN WINTER.

WENDELL INCUBATOR CO. HOLLY, MICH

Your Hens Must Pay This Winter

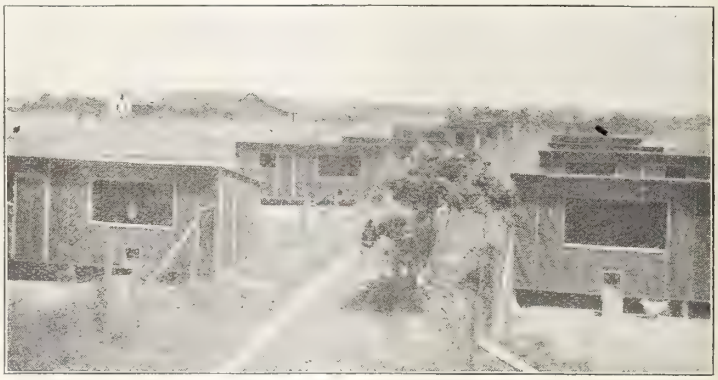
IN these times of high prices for all kinds of meat the poultryman simply must make his hens pay. All kinds of poultry feed are high in price and must be made to bring the maximum in returns. There is no one best poultry food. Many are good singly and in combination, but the *very best results* come from feeding *roots* and *vegetables* in combination with other foods Roots and vegetables are cheap and thereby reduce the feed bill while adding to its value.

Banner Root Cutters

prepare roots and vegetables of all kinds faster and better than it can be done in any other way. Send for free illustrated booklet and make the hens pay this winter. Address

O. E. Thompson & Sons, Ypsilanti, Mich.

EVERYBODY CAN CANDLE EGGS.



TO ENABLE farmers and housewives to test eggs before a candle and tell accurately their condition before they are opened, the Department of Agriculture has published a colored egg-candling chart. To give a true picture of the eggs, twelve impressions were necessary to produce this lithographed chart.

This chart shows the eggs in their natural size as they appear before a candle, and also as they look when open in a glass saucer. The pictures include an absolutely fresh egg, slightly stale eggs, decidedly stale eggs, eggs with yolks sticking to the shell, eggs where the chicken has developed so far that blood has been formed, moldy eggs, addled eggs, and eggs with a green white.

Comparatively few housewives are aware that a green color in the white of eggs is due to the presence of billions and billions of a certain species of bacteria that make a green coloring matter. Eggs with this greenish tint, even though the yolks seem to be perfect, are not fit for food.

As long as the department's supply lasts, these charts will be furnished free upon application to the Editor and Chief, Division of Publications. Commercial shippers of eggs, however, should apply for Departmental Bulletin 51, a technical paper on testing by scientific methods not available to the average farmer. This bulletin includes the colored illustrations. This chart alone will be found to be not merely of great service to the housewife wishing to test the eggs she is to serve to her own family, but also of commercial value to farmers, country merchants, or egg shippers who wish to buy and handle eggs on an accurate quality basis.

The great spoilage of eggs in this country is due to bad handling and is quite unnecessary. Part of the remedy is to teach everybody, from the farmer to the consumer, how to tell the quality of an egg without breaking the shell. The country buyers, the middlemen and the housewife judge of the quality of the inside of a cucumber or an eggplant, or any other vegetable, by the appearance of the outside and the firmness of its texture. It is not possible to tell the quality of an egg by looking at the shell, though it is safe to say that the eggs with shiny shells are apt to be aged. A fresh egg looks as though it had been dusted with a very fine powder; the "bloom," as the egg men say. But in order to know what is inside the shell the egg must be held in front of a strong light—such as an electric bulb furnishes—which comes through a hole about one and one-quarter inches in diameter. The room must be dark. When the egg is held close against the hole the bright light renders its contents visible, and the quality is indicated by the appearance of the yolk, the white and the air space at the blunt end. There are many egg "candles" on the market, but the housewife can easily make one for herself by cutting a hole in a small pasteboard box, which is slipped over an electric light bulb. If gas or an oil lamp is the source of light, a tin box or can should be used.

sed to broiler or laying age 22 chick-, two of the others dying and the ier four disappearing.

Fourteen of this lot of 22 were pul- s and the first one laid on July 23 and ee on the 24th. The first to lay was White Orpington and she laid 24 eggs hout a break, then was broody for ht days, and has laid nearly every y since. They weigh from six to seven . The next chickens were not hatched til May 12th and three and one-half nths later one of this lot weighed five . and fifteen days later six lbs. and ny of the other cockerels were over lbs. weight at four months old. I de all these chickens work for all their atch feed in deep litter; keep dry sh in hoppers before them after the st six weeks and gave them unlimited eds from the garden. Of the May tched chicks I raised 81 out of 83. I getting 52c for eggs and 30c for ultry, and although feed is high I l that the seventy pullets I intend to nter will pay me for all I have spent their production.

JNIOR AMERICAN POULTRY CLUB.

HE Jr. A. P. C. is the only one of its kind in America. It is not exclusively a boy's club, for we welme girls and young women just as adly.

We urge all you young breeders and nciers to join our club because in this y your interests will be closely guarded d promoted in every possible way. ien, too, you may compete for the tb's cups, gold and silver medals, ribns, etc., and receive free of charge all e club's publications, through which u learn of all the club's doings and ep posted on the new poultry ventures e world over.

You will have a voice in shaping the rse and policy of the club, in electg officers, and formulating plans for rk. The annual membership fee for ive members is $1, for life members and for honorary members $5, with other dues for life. In addition to ese, there is a Board of Patrons comsed of 20 men and women influential the poultry world, who will advise l lead the young people to wholesome l helpful lives. "To become a mem- of this board, it is necessary to give 5 to the club and receive the approval the executive committee."

It is with great pleasure that the club nounces the appointment of Mr. Maur- F. Delano, proprietor of Owen rms, Vineyard Haven, Mass., as presit of the present Board of Patrons. e appreciate what the older breeders America and Europe are doing for —as well as the poultry papers and gazines of the country, but we make appeal to everyone who reads this, give us their support as largely as posle by offering prizes, becoming honor- members, serving on the Board, giv- advertisements for our bulletin and r books and thus help us grow into lub that will exert an influence for d all over America. We need your p to do this.

A copy of the Annual Year Book is sent e to all members, but will be on sale the secretary's office for 50c—worth ce the price to anyone interested in ltry. The book contains some beau- l illustrations and many splendid articles from noted poultry breeders in America and England, including Miss S. Carey, Mr. U. R. Fishel, Lynn Townsend, Duncan McCullock, Jr., and others. There is not a large supply and all who want a copy of this—the finest book of its kind ever published by a poultry club—should order at once. It has the history, past and present, of the club and also what it hopes for the future.

To learn more about our club, we urge you to write for information and application blanks to Elbert E. Lawrence, Sec.-Treas. of Jr. A. P. C., Craig, Mo.

In the "Poultry Item" of Sellersville, Pa. (which is the club's official organ), the secretary conducts a department each month concerning the happenings of the club and matters of importance to all interested in the club's welfare. A year's subscription to this paper is only 50c and worth double the price to any poultry raiser.

In closing, I urge the parents to cooperate with us. To those who appreciate home life, the home circle and all it stands for, who would teach the youngsters, early, how to find their pleasures right at home, I say, interest them now in the raising of standard bred poultry.

Getting Rid of Mites.

ON page 1147 of the September AMERICAN POULTRY JOURNAL is given a mode for getting rid of mites, which, no doubt, is good and efficient.

For over twenty years I have used the following method for that purpose with entire success and satisfaction. I have the roost perches lie loosely in gains cut in bearing rails screwed to the walls of the hen house. On the under edge of the perch bars I have grooves for nesting and hiding places for the accommodation of the mites. This is to prevent them from going to the walls for breeding grounds. Now, unless the premises are litterly overrun with mites, they will all be found in the grooves on the underside of the perches. Remove the perches to an open place outside. Pour kerosene the length of the perch. Stand it on end and hold a lighted match to the lower end. The blaze will flash to the upper end of the perch and out for want of fuel without in the least injuring the perch. This done once a week for three or four weeks will make a clean sweep of the mites. The object

—o—

Famous English Poultry Farms Enter Panama-Pacific International Exposition Egg-Laying Contest.

ENTRIES in the Panama-Pacific International Egg-Laying Contest, conducted by the live stock department of the Exposition, have been received from Edward Cam, of Houghton, England; Frank Toulmin, of Ingel, Lancs., England, and from the Utility Poultry Farm of Haighton, Ribbleton, Preston, England, of which Alfred Parkinson is the owner. These entries, which consist each of one pen of not less than ten pullets, pure bred and of the same variety, will represent the White Leghorn and the Single Comb White Leghorn strains.

The contest opens on November 1st, 1914, and continues for twelve full months. The birds will all be under the direct supervision and management of the poultry division of the College of the University of California.

Mr. I. D. Graham, Assistant Chief of the Department of Live Stock, who, under D. O. Lively, Chief, is handling the details of the contest, has set out in response to requests more than 35,000 copies of the rules of the competition. Inquiries have been received from all parts of the world indicating that this is to be the greatest international egg-laying contest ever held.

As having a direct bearing upon the high cost of living and the problem of reducing the present cost of production of the necessities of life it is universally recognized that the chief value of egg-laying contests lies in the fact that they are a direct means of increasing the egg-laying qualities of the different breeds and also of bringing about the ability to produce eggs at very early ages. In one of the experimental stations in the United States, where egg-laying contests have been conducted for a number of years, it has been demonstrated that among all varieties, without exception, the first pullets which have begun to lay have come from the highest laying hens. The same authority has proved by previous experiments that no large producing

hen or early laying pullet ever came from poor parentage.

Cases are on record where birds have been developed through these egg-laying contests which have begun laying at four months and careful selection and breeding has already resulted in producing strains of the different varieties which are not far from the 200 egg mark, once set as the limit beyond which no hen could go. In individual cases this large figure has long since been passed and the continuation of egg-laying contests and the breeding methods necessary to record production is rapidly developing strains in all varieties capable of both heavy production and of early laying. Valuable trophies and cash prizes are offered by the Panama-Pacific International Exposition and by the private organizations as special prizes.

Announcement has been made that the International Poultry Exposition, which has been held for the past three years at Atlantic City, on the famous Board Walk, will be brought to San Francisco in 1915, and will be located on the ground of the Live Stock department of the Panama-Pacific International Exposition, thus adding another attractive feature to the program that is making the exposition the center of interest for the live stock and poultry world for 1915.

W. S. Russell, of Ottumwa, Iowa, has arranged with the Chief of the Department of Live Stock, Panama-Pacific International Exposition, San Francisco, whereby he will promote and conduct a display and sales department for poultry.

A continuous educational exhibit of pens of poultry will be maintained outdoors in the "View Flocks" department, free to the public during the entire period from January 20th to September 20th, 1915.

This will afford the visiting millions of the world an opportunity to study the characteristics of the different varieties.

Oats sprouted in a simple, small box "that leaks" water is the solution of the green food question as it affects laying hens, which Mrs. Donald Salter, 1721 Grand boulevard, has devised for her flock of three dozen. The sprouter consists of three small crates about 10 by 20 inches in area and two inches deep, such as are used for shipping cherries—these and nothing more. No wire screen, no burlap mat, no special heat is required. Into one of these boxes Mrs. Salter places a layer of good oats half an inch deep, and holds it under the warm water faucet over her sink until the oats are soaked. The surplus water runs out. She repeats this process, never using hot water, as often during the day as her household duties permit, and then places it conveniently out of the way in her kitchen. In three or four days the oats begin to sprout, grow rapidly and in two weeks are tender and delicious for the noon feed. When the first box is well sprouted she fills another, and by the time the first is ready for use the third is started. The heat of the kitchen is sufficient for growth, and an occasional sunning in the window, as one suns the geraniums. The hens eat it greedily and they need it. Mrs. Salter has solved the question of a sprouter so far as the one-lot enthusiast is concerned.

SILVER CAMPINE HEN.

Prize-winning hen at Coliseum, Chicago, 1912; dam of many prize-winners. Owned and exhibited by Frank E. Hering, South Bend, Ind. Made from retouched photo.

Cock Bird Lame.

Q. I have a yearling male that suddenly went lame. He can use leg to certain extent in walking around, but will not put weight on it. There seem to be no bones broken in any part, nor is there any swelling or discoloration. I have him penned up in a coop with the ailing leg well bandaged. Have kept the bandage pretty well saturated with liniment but cannot see any improvement in condition. J. H. M.

Sterling, Colo.

A. Examination of the bird would be necessary to diagnose this case. It may be due to injury to leg, but it is just as likely to be due to tenderness in abdominal region from some other cause. Would give the bird one-fourth of a teaspoonful of epsom salts in two tablespoonfuls of water, would keep him quiet and wait developments. It will be just as well to remove the bandage now if you have not already done so. Ten days is usually a broken bone and it will take several days for him to get used to being without long enough to bandage fowl in case of out a bandage. It is often difficult to determine how much value to give to a "limp" in animals. We have had birds limp for a day or two after being banded with a loose leg band and when there was nothing whatever the matter with them.

While nest eggs have nothing to do with increased egg production, they have a good mission in teaching the hens to lay in certain places, instead of dropping their eggs any and everywhere.

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

Memphis Holds Great Show.

The show of the Tri-State Poultry Association at Memphis, September 26 to October 3, will go down into the history of the association as being the greatest one held to date. For years Memphis has been noted as a quality show, a show free from hucksters and carload men and it has for this reason drawn the exhibits of some of the foremost fanciers of the United States. The remarkable quality and quantity shown this year is due to the energetic work of the secretary, Martin F. Schultes, and the valuable assistance of the members of the Tri-State Poultry Association, especially the work of Mr. McMillan and Mr. Bejach, was responsible to a great extent for the fine exhibit.

There were close to 2,700 birds entered, Barred Rocks, Rhode Island Reds and White Leghorns forming the largest classes. The S. C. White Leghorn class was as large and as good as any we have seen at this time of the year. There were fully 350 birds exhibited, 34 pens and 180 singles. The first prize cockerel owned by Mr. O. B. Andrews of Chattanooga, Tenn., stood head and shoulders above every bird in the show and was a runner-up as champion bird of the entire show. Mr. Andrews' "Efficiency Strain" is known throughout the South as the leading strain and captured also the honors in the Barred Rock class, having won champion cockerel and other prizes.

In the Black Minorca class which was very hotly contested Mr. Charles G. Pape, despite the fact that nine of his birds arrived dead, captured the leading honors. His first prize cock was champion cock bird of the show also. Mr. Pape has been winning down at Memphis for years and the words Charles G. Pape "of course" wins first again has become so to say a by-word among the judges and exhibitors.

The White Wyandotte class showed a number of fine birds. In the White Rocks, W. J. Brinkley, Iuka, Miss., won the leading honors. The birds were in good condition and handled by Mr. Jolly, formerly with the Studebaker Farms, South Bend, Ind.

The Orpingtons were out in good numbers and Mrs. Reginald Stonestreet of Nashville, Tenn., was the leading exhibitor and winner. Mrs. Stonestreet's birds showed fine type and remarkable color and were worthy of the honors.

The exhibit of turkeys, ducks and geese were extraordinary for quality. The Pekins and Buff ducks showed fine standard requirements. Bourbon Red turkeys fine in color and type. Bantams shown by Mrs. Forbes of Decatur, Ala., won easily.

The association offered hundreds of fine cups and other premiums and the exhibition was a credit to the state. Judges E. C. Branch, Carl Carter and yours truly handled the classes to the satisfaction of all exhibitors and we all were of the opinion that the exhibition and the quality of the birds was remarkable for this time of the year.—L. A. Stahmer.

Think It Over—Anyway.

The Chicago Poultry Breeders' Association will hold their Second Annual Exhibition in the International Amphitheater, Union Stock Yards, Chicago, Ill., January 14 to 20, 1915.

This hall is without a doubt one of the best, if not the best, natural lighted exhibition buildings in America. Unlimited floor space.

This show promises to be one of the best in the country. This is the Official American Poultry Association (Illinois Branch) Show, where the Gold Medal for Champion Cockerel, Silver Medals, Diplomas, etc., are offered. Numerous National and State meets of various clubs will meet here. From past experience this show has proved a wonderful asset to breeders as a selling point.

Our judges: D. E. Hale, Earl Hemenway, Calvin Ott, Frank Conway, Joe Dagle, Joe Coleman, E. M. Quay and Chas. McClave. Premium list now ready. Entries close December 28, 1914. Arthur E. Lemieux, secretary, 4537 N. St. Louis Ave., Chicago, Ill.

Show at Goshen, Indiana.

Every poultry association speaks in glowing terms of the number of special premiums they are offering, of the large cash prizes they pay, what a nice, large hall they have for their exhibit, the advertising value of a winning made at their show and of the capable judges they engage, etc. The Goshen boys offer all these inducements, but their strongest and best boast is the courtesy and fair treatment they extend to every outside exhibitor. We realize that the ultimate success of our show depends on securing exhibitors who will be with us from year to year and know when they show at Goshen, whether they attend in person or not, that their birds will receive every prize they are entitled to. Every officer of the association will fight for fair treatment. We want friendly rivalry. The best bird must win.

Our premium list is now ready for mailing. We are giving silver cups galore. Come and win one or more. Attend in person if you possibly can. We will try and show you a good time. Write today for a copy of our premium list. It will be sent you promptly. Address either W. H. Schadt, president, or A. A. Kryder, secretary, Goshen, Indiana. Don't forget the dates, December 8-12.

Brookfield, Illinois, Show.

December 3 will see the opening of the First Annual Poultry Show of the Brookfield Fanciers' Association. It is a new association and only breeders living in Brookfield will be allowed to enter birds. Several cash prizes will be offered besides a number of specials.

Judging from the amount of hustling they are doing we predict a high class show with numerous entries and a large attendance. The show will be held in the large village hall, which assures exhibitors and spectators plenty of room. For further information address A. L. Judson, Brookfield, Illinois.

The Greater Buffalo Show.

In October issue Buffalo was mentioned as one of the cities holding two poultry shows this season. A letter from George Urban, Jr., states that the International Show slated for January 11 to 16, 1915, will not be held, and that the only big poultry show to be held in Buffalo this season is the Greater Buffalo Poultry Show during Thanksgiving week. The entries for the Buffalo show close November 10.

The Partridge Rock Club will hold their New Jersey State meet at Asbury Park during the week of November 25-29, 1914.

"Halbach's Pride," 1914 Cockerel, unretouched Photograph.

WHITE PLYMOUTH ROCKS

America's Leading Winning Strain

There is no strain of White Plymouth Rocks in America that can show a better all-around show or egg record than Halbach's. For years it has been winning in the hands of my customers in some of the leading shows of America. My great record at Chicago during the last five years is an unbroken line of successes and will stand supreme for years to come. Right now I have the greatest lot of youngsters for sale I have ever bred. They have show quality and the egg laying habit bred into the bone and will make good in either line. I am sure they cannot be duplicated anywhere for the money I am asking for them and if you are in the market it will pay you to send 20 cents for my big catalogue No. 2 which gives full information of my farm, my methods and prices.

H. W. Halbach, Specialist, Box 1, Waterford, Wisconsin

The former president of the Rhode Island White Club of America, Carl D. McCarthy, having sold his entire flock of Rhode Island Whites and quit the poultry business, has resigned and Edmond E. Field of Hasbrouck Heights, N. J., has been appointed to fill the unexpired term. Mr. Field is a thorough-going chicken man, a natural-born fancier, which together with his good stock of common sense and business ability, we believe will add new life to the club. For any information desired in regard to this club write the secretary, Mrs. C. M. Vertrees, Cecilia, Ky.

The American Buttercup Club desires to call your attention to the fact that it has made a change in the ribbons it is offering to its members and instead of the ribbons offered in the club catalogue, it offers the following: Ribbons for best shaped male and female, best colored male and female, and best male and female comb, six ribbons in all, at all shows held between the dates of November 1 and March 1 of the show season.—G. A. Williams, Secretary, Warwick, N. Y.

The next annual exhibition of the Nebraska State Poultry Association will be held at Hastings, Neb., January 18-22, 1915. This show will be cooped with Empire coops. Many specialty clubs are offering handsome trophies, cups, etc., which in addition to the unusually good specials and regular money offered by the association insures keen competition. Chas. H. Rhodes, E. G. Roberts and Adam Thompson, judges. Those interested in this show should write Secretary A. H. Smith, Lincoln, Neb.

The Southern Pennsylvania Breeders' and Fanciers' Association will hold their next annual show during the third week in December, 1914, at York, Pa. This is a new organization which is made up of some of the best breeders in Pennsylvania, the officers of which are: President P. H. Glatfelter, Spring Grove, Pa.; Vice-President C. N. Myers, Hanover, Pa.; Secretary Allen M. Seitz, York, Pa.; Assistant Secretary W. H. Myers, Hallam, Pa.; Treasurer C. S. Shirk, Hanover, Pa. For premium list and further particulars address the secretary.

Mr. J. C. Byrd, secretary of the Charleston (W. Va.) Poultry Association, is out for the biggest and best poultry show in the entire South for 1915. Judging from the progress made by this wideawake organization in the past they will accomplish what they have set out to do. Their tenth annual exhibition will be held January 4-9, 1915, at Charleston, W. Va. For premium list and other information address Secretary J. C. Byrd, Charleston, W. Va.

The sixth annual show of the Terre Haute Poultry Association will be held at Terre Haute, Ind., December 29, 1914, to January 3, 1915. Geo. H. Northup and H. A. Pickett, judges. The members of this association are aiming to make this the quality show of Indiana. For premium list and further information write to M. Austin Potter, secretary, 433 Washington Avenue, Terre Haute, Ind.

The American Buff Leghorn Club offers a special prize to every poultry show in the United States and Canada that will publish in their premium list and send copy of the same to the undersigned, the following notice: "Orders for ribbons will be sent on request from the secretary.—Geo. S. Barnes, Secretary, Battle Creek, Mich."

The next annual meeting of the International Rose Comb Black Minorca Club will be held in connection with the Tri-State Poultry and Pet Stock Club of Toledo, Ohio, during the week of November 30-December 6, 1914. The business session of the club will be held Thursday, December 3, at 2 p. m. For full particulars in regard to this club address Secretary Lloyd C. Mishler, North Manchester, Ind.

The National Meeting of the American Buff Plymouth Rock Club will be held during the week of December 7-12, 1914, at Rochester, N. Y., in connection with the Flower City Poultry and Pigeon Association. For full particulars write Secretary J. W. Chapman, Box 554, Rochester, N. Y.

The Freeport Poultry and Pet Stock and Grain Association will hold its annual exhibition December 14-19, 1914, at Freeport, Ill. Uniform coops will be furnished free by the association. Geo. A. Heyl, G. W. Hackett, judges of poultry; John Bauscher, judge of grain. For premium list address the secretary, Paul Wurtzel, Freeport, Ill.

The twelfth annual exhibition of the Jackson Poultry Association will be held at Jackson, Mich., December 29, 1914-January 3, 1915. Comparison judging. C. H. Rhodes, judge. Catalogue ready by December 1. Write for one to C. M. Dodge, Secretary, 129 Pigeon St., Jackson, Mich.

The Ocean County Poultry Association will hold their third annual exhibition at Lakewood, N. J., December 31, 1914-January 2, 1915. Premium list now ready. J. H. Wolsieffer and Louis Paul Graham, judges; Owen B. Shuts, secretary, Toms River, N. J.

The National Buff Orpington and American Black Minorca Clubs will hold their annual meet in Chicago during the week of the big Coliseum show. Breeders of these two varieties should make it a point to exhibit at this show and win the club prize.

The De Pere Poultry Association will hold its first annual show at De Pere, Wis., January 6-10, 1915. Geo. Wells, judge. For premium list and full particulars address Secretary Charles Behrendt, Jr., 1255 Howard Street, Green Bay, Wis.

The attention of the Rhode Island Red breeders is directly called to the Pennsylvania State meet of the Rhode Island Red Club of America at Williamsport, Pa., November 17-20, 1914, to be held in connection with the Williamsport Poultry Show.

The Illinois Poultry Fanciers' Association will hold their annual show at Waukegan, Ill., November 28-December 4, 1914. Empire cooping, the property of the association, will be furnished. Send for premium list to the secretary, R. B. Conolly, Waukegan, Ill.

The second annual show of the Ozaukee County Poultry Association will be held at Cedarburg, Wis., December 9-13, 1914. Send for premium list to the secretary, James E. Greenwald, Cedarburg, Wis.

The Savanna Poultry Association will hold their annual show November 30-December 5, 1914. H. A. Pickett, judge. For full particulars write Secretary Will M. Laing, Savanna, Ill.

The Kansas State Poultry Federation and State Organization with 700 members will hold their annual show and convention at Topeka, Kan., December 7-12, 1914. Write L. H. Wible, Chanute, Kan., for catalogue.

Poultry Diseases and Their Treatment

By F. A. Kaupp, M. D.

A book containing 185 pages, 5x8 inches in size and is profusely illustrated with original half-tone and pen and ink engravings. It shows the many parasites, germs, and bacteria that attack our poultry, as well as tells the names of the diseases, the cause or causes, the symptom and lastly the *treatment for each disease.* The book is printed on a high grade super calendared book paper, substantially bound in cloth, linen sewed to make it flat opening and the title is stamped in gold. Every poultryman should add this very useful book to his library. Remember that we prepay all charges on the book to your town.

Brubaker's S. C. W. Leghorns

Won at the Great Lancaster Fair

1st and 2d Cock 1st and 2d Pullet
1st and 2d Hen 1st and 2d Pen
1st and 2d Cockerel 1st for best dozen eggs

A. P. A. medal, 5 cups and gold special. All varieties competing for these specials.

They have won for me in all the leading Eastern shows, wherever I have shown them and will win for you in any show.

They are superb in shape, pure white in color and have been raised on free range.

In both old and young stock, I can furnish you with the best quality for your money. Write me your wants.

E. E. Brubaker Box A Bird-in-Hand, Pa.

ANGEL, THE RED MAN

SINGLE AND ROSE COMB

400 Early Hatched, Large, Vigorous Cockerels

Quality to burn. If you have some show in view and need a good cockerel, hen or pullet to complete your exhibit let me figure with you. I will tell you what I have and for the quality I can furnish my price will be very reasonable. State if you want Rose or Single Comb. **My Special Guarantee Plan**—Write me fully the show you wish to make or the kind of a breeder you need; if possible how much money you care to invest and I will write you just what I have. If in need of a cockerel, I can let you have one of those dark, rich, red, even surface colored birds with under color a delight to look upon. One with good red eyes and almost perfect type, with other requirements necessary to make a blue ribbon winner. If after securing the bird he is not satisfactory in every respect, don't hesitate about returning him to me and I will either refund your money or send you another bird, express charges prepaid. Remember Angel, the Red Man, will make the transaction full of pleasure and profit for you. Write me today so we will have plenty of time to weigh things carefully before making the sale.

M. C. ANGEL - BOX A - GOSHEN, INDIANA

A five-months-old pullet weighs 5½ lbs. and already laid her first eggs.

Trenton, N. J., Inter-State Fair, September, 1914.

BY H. P. SCHWAB.

Poultrymen owe a great deal to the management of the Trenton Inter-State Fair and much more to the superintendent of poultry, Mr. Harvey E. Rogers. If this fair association will go the limit and back up Mr. Rogers, as he and the poultry industry deserves, then I feel assured that the future Trenton Fairs will have a poultry display yearly that will compare most favorably with any held any place.

Mr. Rogers in this his first year as superintendent has won the hearts of all poultrymen. He arranged and put up as clean and choice an exhibit as is seen at any winter show and I am sure that next year he can fill a building three times as large and with the best quality grown in the world. On all sides we heard Mr. Rogers commended and we would fail in a personal duty if we did not here give him his due. We are pleased to remember so deserving a fancier and manager and do hope the fair association will favorably give him and all his breeders a building that will compare favorably with others and trust to Mr. Rogers and his friends to fill it and to place it first on the poultry map as the greatest of all great fall poultry shows.

Barred Rocks, a fair sized class with several grand birds seen and some famous winners in line. First cockerel a most promising bird.

White Rocks a very strong and hot class with several well known breeders showing. The Rancocas Poultry Farms, Browns Mills, N. J., were here with their best, and it took the best to win. Their winnings were: Cock, 2-4; hens, 1-2; cockerel, 1-4; pullet, 1-4; pen, 1; first cockerel the best young male we have seen at a fall show. His shape, style and color were ideal. Comb and head points extra choice. In S. C. White Leghorns these farms won: Cock, 2-3; hen, 1-2; cockerel, 1-2; pullet, 1-3; pen, 1. Mr. M. L. Chapman, manager, was in attendance. He deserves credit for the quality and condition of all these birds.

Second White Rock cockerel owned by Minich Bros. was a grandly finished bird, and in good condition. They also won: Cock, 3; hen, 3, and pullet, 2.

Buff Rocks were a beauty class in type and extra in color. First hen an exceptionally choice one.

In Partridge and Silver Penciled Rocks all first prizes and about all others were won by the Bonepart Park Poultry Ranch, Bordentown, N. J. This line shows the finest of type and color.

The honors in Columbian Rocks and Columbian Wyandottes were won by the Wilburtha Poultry Farm, Trenton Jct., N. J. We have written up this plant and hope to again call and see this line at home. They also won the honors in Buff Leghorns and first cock, etc., in S. C. White Leghorns.

White Wyandottes were an unusually strong and fine class of birds, a class good to see and to appreciate if possible the value, interest and work combined in such a beauty class. Mr. Chas. Nixon, Washington, N. J., one of our oldest and best known breeders of this variety won: Cock, 1-5; hen, 1-2; cockerel, 2-4; pullet, 1-2; pen, 1; best display, etc. This is a great win in a very fine class. Mr. Nixon had his birds in select condition. Their type is of the best and color and finish of the very best. Mr. Nixon is also one of our best known judges, a man to bank upon.

Mr. J. E. Myers won in this class: Cock, 2-3-4; hen, 4-5; cockerel, 1-3-5; pullet, 3-4-5; pens, 2-3.

Rhode Island Reds in both combs were the largest classes at the show. The Hamilton Farms, Gladstone, N. J., with Mr. Fred Huyler, manager, won in Single Combs: Cock, 3; hens, 2-3; cockerels, 1-2-5; pullets, 2-4-5; pen, 2. In Rose Combs: Cock, 2-3; hens, 3-4; cockerels, 1; pullet, 1-2.

Mr. J. H. Robinson won in S. C.: Cock, 1; pullet, 1-3; pen, 1. Other winners were Roanoke Poultry Farms, Restless Poultry Farm, Lewis Starr, Jr., Wismer & Wismer, Wm. H. Ayers, etc.

Campines in Silver and Golden were a beauty display and the first Silver Campine cockerel as grand a specimen of this variety as we could wish for. In shape and head points he was about ideal, color and markings very fine. The Martling Hennery, Ridgefield, N. J., produced this bird. Their winnings were: Silver cock, 1; hen, 1; cockerel, 1; pullet, 1; pen, 1. Golden cock, 1; hen, 1; cockerel, 1; pullet, 1; pen, 1; special display, etc.

Buff Orpingtons, a class of beauty color and birds grandly shown. The Old Forge Poultry Farm, Spring Grove, Pa., winning cock, 1; hens, 1-2; cockerel, 1-3; pullet, 2; pen, 1, a very select line worthy of all honors.

Black Orpingtons a small class with the three pullets shown by Mrs. D. Hines, E. Lansdowne, Pa., the feature birds of the whole class. They had grand size, beautiful shape and the best of color. Mrs. Hines has been breeding for several years and has won at many of the leading shows. This line shows improvement year by year.

Ducks, according to Uncle Bill Minich, were a royal class of quality; all varieties were seen to advantage. Turkeys, geese, Bantams and pigeons completed the display and rounded out an exhibit well worth seeing.

Mr. Chas. D. Cleveland was showing his Guernsey cattle and made a killing by winning championship cow, etc., but he was found in the poultry building several times. Other prominent visitors were Mr. Henry Schnitzer of White Rock fame; Henry D. Riley, breeder and secretary of the Barred Rock Club; Colonel Louis P. Graham, breeder, artist and judge; Mr. Roberts of the Oakland Farms, displaying his birds; Mr. Rufus Delafield of the Sunswick Poultry Farm; Major Dillingham of the International, etc. All were glad to come and promise to come again, we too.

—o—

Mt. Pleasant, Iowa, will hold a poultry exhibition December 7-11, 1914. Carl Dare, judge. While this is a new organization, the association has every assurance that it will be the worth-while kind. The show will be held under the A. P. A. rules with a most attractive list of regular and sweepstake prizes. For premium list address Secretary Ralph W. Owen, Mt. Pleasant, Iowa.

BLUE ORPINGTONS :: SILVER CAMPINES

Though we are at war I have obtained a special permit from our privy council to export exhibition birds to America. I can therefore undertake to land in New York (alive) any orders entrusted to me. I have won more prizes with Blue Orpingtons this season, sometimes competing against the best Blacks, Buffs and Whites seen out, than almost all the Blue Orpington breeders put together. If you want to win at any show in Blues I can supply you. Every Blue Orpington I have shipped to America to win has done so. In Campines exported to America the wins were greater, as I shipped a greater number. Write me your requirements and size of competition, and I will quote you by return mail. Mention American Poultry Journal.

Max de Bathe :: **Vice-President English Poultry Club** :: **Hartley Court, Reading, England**

ROSE'S ORPINGTONS

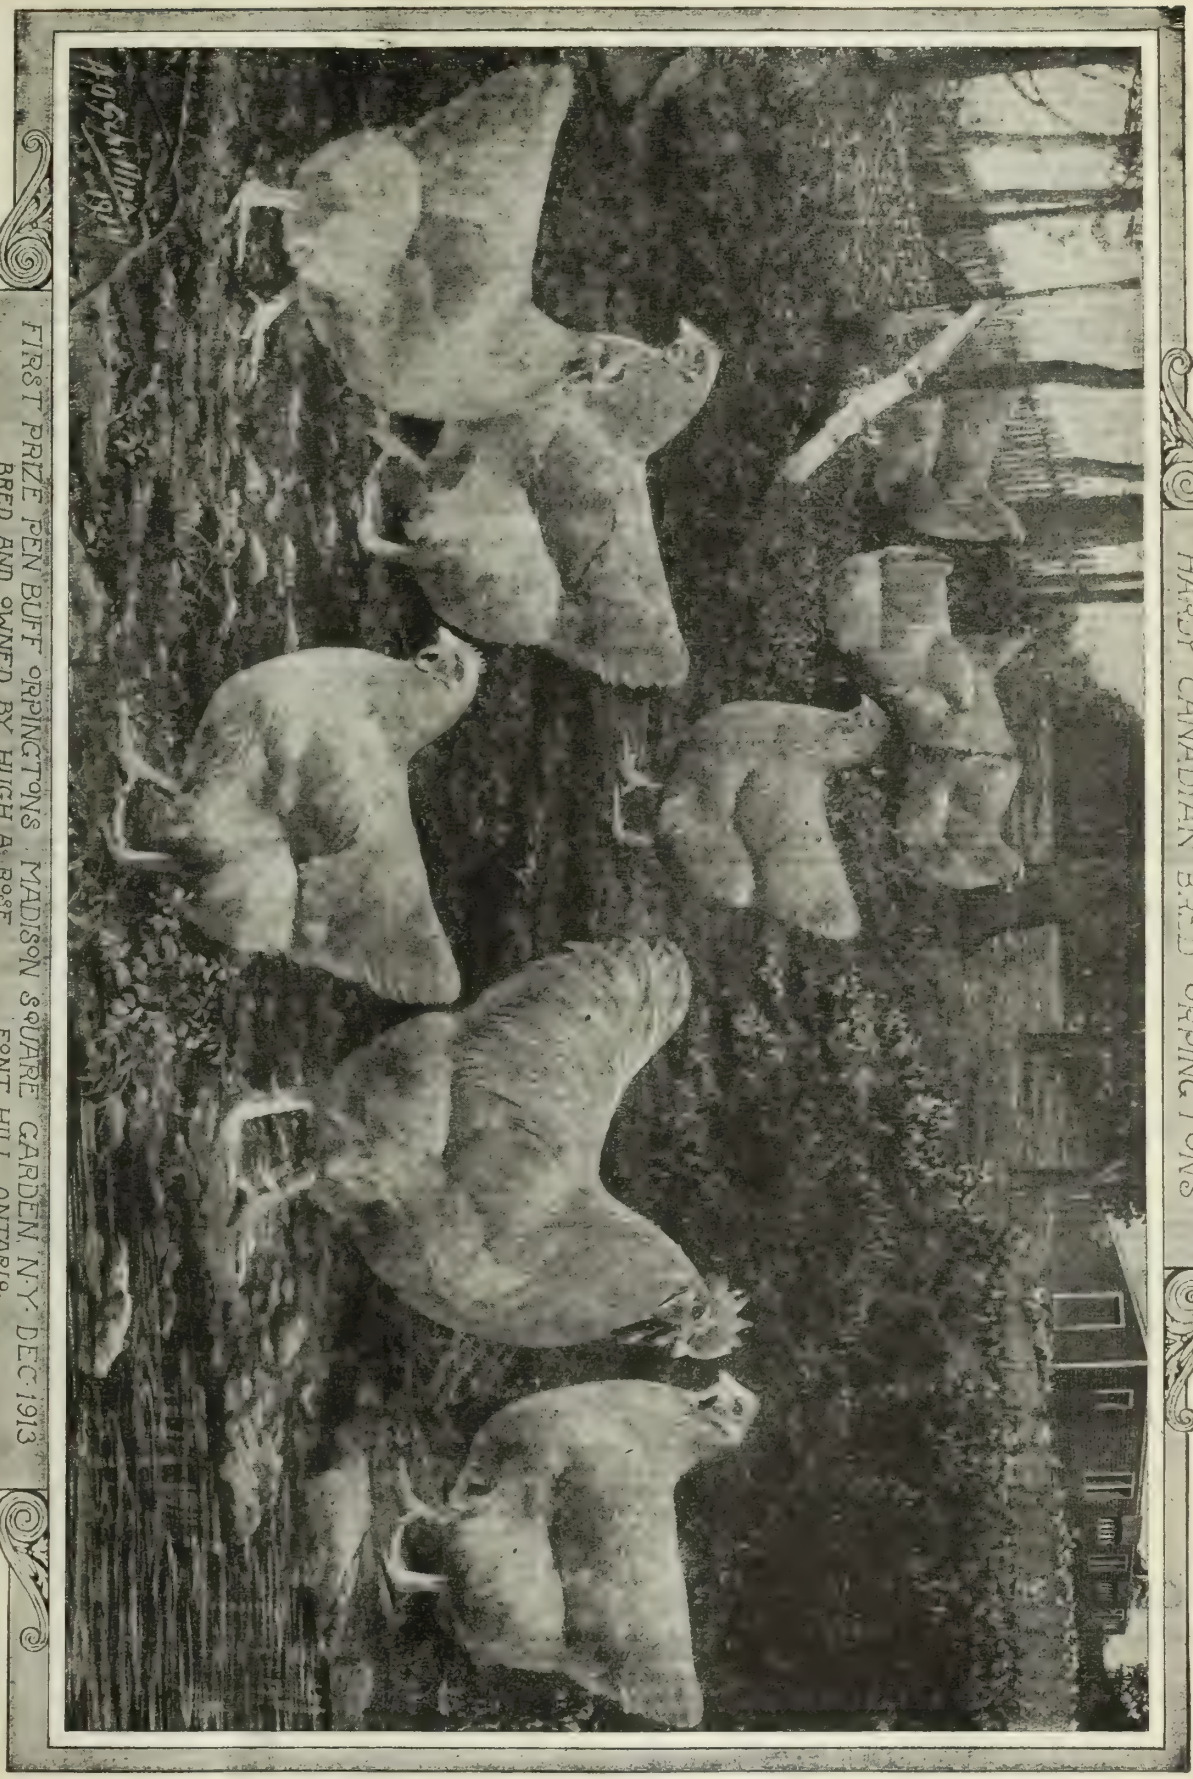
1st Buff Cock, Chicago

1st Buff Pullet, Madison Square Garden

1st Buff Cockerel, Madison Square Garden

1st Black Cock, Madison Square Garden

1st Black Hen, Madison Square Garden



1st Black Cockerel, Boston

CHAMPIONS OF AMERICA

My World's Champion Buffs won the championship of the West at the Chicago Coliseum Show, December, 1913, and the championship of the East at the Imperial Madison Square Garden Show, December, 1913, in competition with nearly every prominent breeder in America as well as the best from England. At these two most magnificent shows, **I won more first prizes** than all my competitors combined, winning at **Madison Square Garden,** 1st and 5th cockerel, 1st and 4th pullet, 1st pen, 5th cock and 3d hen; at the **Chicago Coliseum Show,** 1st, 2d and 5th cocks, 3d hen, 1st and 5th cockerel, 1st, 2d and 4th pullet and 3d young pen. The truly greatness of this achievement can only be realized when you understand that our winners at New York were not shown at Chicago, with the exception of one bird, the 1st pen cock at the Garden.

No breeder in the world has ever made the record with **Black Orpingtons** that I have; this record is not made at one show alone, but is made by a series of the greatest triumphs at the largest shows in the country, under twelve different judges. In the past three years, I have won the championship for best display in Black Orpingtons, at the following shows: Madison Square Garden, New York, Baltimore, Boston, Pittsburg, (National Black Orpington Club Show), New York State Fair, Allentown, Hagerstown and Toronto. We have raised this year the finest lot of cockerels and pullets that we ever had and as our old birds have come through the moult in grand shape, we are now in a position to supply you with old and young stock to win any show in America. Write to us stating what you wish and we shall gladly supply you with descriptions and quotations. **Remember** that any birds that do not absolutely satisfy a customer can at once be returned and your money will be refunded. I want you to have my catalogue, beautifully illustrated in colors.

HUGH A. ROSE **Frank F. Conway, Manager** **Box A** **FONTHILL, ONTARIO**

"HARDY CANADIAN BRED ORPINGTONS"

FIRST PRIZE PEN BUFF ORPINGTONS MADISON SQUARE GARDEN, N.Y. DEC 1913
BRED AND OWNED BY HUGH A. ROSE FONT HILL ONTARIO.

The Great Allentown Fair, September, 1914.

BY H. P. SCHWAB.

Allentown, Pa., a beautiful and thriving little city, has been placed on the poultry map through the successful efforts of W. Theo Wittman, manager of the poultry department of the fair. For years we have accepted this as one of the three or four great early shows where the breeders congregate to exhibit their birds and to see what the other fellow has, and there they can usually find out and get advance news items of what to expect during the season.

The display in quality and numbers was this year about of the same character as in the past. Breeders of national reputation were exhibiting and in many of the popular classes the competition was of the very best. It was an exhibit of class, well shown and with the best possible arrangements. The reader can well imagine that with the following exhibiting that the classes were strong and the quality of the best. Here were seen the birds of the Owen Farms, A. J. Fell, C. Guy Meyers, Meadow Brook Farms, Orchard Poultry Farm, John F. McKay, A. J. Gies, J. D. Koons, Dr. J. S. Rittenhouse, Koch Bros., G. W. Tracy, A. N. Anderson, etc.

There is no question in my mind but that the Owen Farms birds are superior and better than ever before. We have seen them at two great shows this season when competing in the best classes ever brought together in the fall. They have won more and higher honors and with evidently better birds than ever before. With this we feel we can highly commend them, for such stock and such breeding is above value. Here exhibiting White Rocks they won in a class of nearly 100 birds: Cock, 3-5; hen, 1-4; cockerel, 1-3; pullet, 3; pens, 1-3. Single Comb Reds: Cock, 4; hen, 1-5; cockerel, 1-2-4; pullet, 1; pens, 1-2. S. C. Buff Orpingtons: Cock, 1; hen, 2; cockerel, 1; pullet, 1; pen, 1-2. This on only six entries. S. C. White Orpingtons: Cock, 3; hen, 1; cockerel, 1-4-5; pullet, 1-2-3; pens, 1-2. By winning best display in all three varieties and several other specials their record is a complete one of special value. Mr. Frank H. Davey was in charge of this exhibit.

Whenever you see A. J. Fell, West Point, Pa., exhibiting his White Wyandottes you can depend upon seeing a class worth while. Mr. Fell has shown here for years, and each year we have seen him carry away cups, ribbons and specials by the load. Last year he hired an extra man to help him safely back home with the cups won. Mr. Fell's birds were of their usual high quality, his cockerels short in feather and hardly at their best. When filled out and in feather they will be screamers, for they have the bone, body and heads for which this line is famous. Mr. Fell won: Cock, 1-2-3-4; hen, 1-2-3-4; cockerels, 2-3-4-5; pullet, 1-2-4-5; pens, 1-2-3. Mr. Fell also won the sweepstakes championship cup for best 10 birds at the show.

Barred Rocks, while not as large a class as we would like to see, was a very good class nevertheless with 62 birds shown. The cock and pullet classes were the best. Mr. C. Guy Meyers, Siddonsburg, Pa., made the big strike with a very choice line of birds, winning: Cock, 1-2; hens, 1-3; cockerels, 1-2; pullet, 1-2; pens, 1-4; best display, etc. Both his cocks were fine clear barred birds, as were also his cockerels. First and second pullets were extra grand birds of right color and grandly barred. This line has been a factor for years and has won well at Philadelphia, Hagerstown, etc.

Meadow Brook Farms exhibited only their White Rocks and in competition with the best won: Cock, 2-4; hen, 3; cockerel, 4-5; pullet, 1-4; pen, 2. This line has the best of shape and style. Both the cockerels were of superior form and shown in extra fine condition.

Buff Rocks a very sweet class with G. B. Schellenbarger, J. H. Vincent, Plumlyn Farm, J. H. Hertz and Billheimer & Kratzer the leading winners.

Mr. John F. McKay, Bordentown, N. J., made a very unusual record in a great quality class of Partridge Rocks, winning: Cock, 5; hen, 1-4-5; cockerel, 1-2-3; pullet, 3-4-5; pens, 1-2-3. This line has been a winner for years and has won at M. S. Garden, N. Y., Boston, Philadelphia, Baltimore, etc. Mr. McKay also displayed here his Stove Colony Brooder. We have seen this brooder in operation on dozens of plants and know its worth.

Silver Wyandottes one of the best quality classes seen at this season of the year. First cock the choice of the class, other winners also very good.

Buff Wyandottes a rich class of beauty color, and a few of fine shape. We were pleased to see the judge consider type fully and here we want to compliment Judge Chas. D. Cleveland for his very fine work done on all Wyandotte classes. He was painstaking and a bird to win had to have the best of standard shape.

The Black Wyandotte class was worthy of a Weed. It was almost as hot as the judging day, which was one of the hottest ever experienced.

Columbian Wyandottes a fair sized class of fine birds. Dr. J. S. Rittenhouse winning: Cock, 1; hen, 1; cockerel, 2, and pullet, 1.

S. C. Reds were one of the largest classes of the show with royal good birds in each department. Besides the Owen Farms winnings the following won ribbons on classy stock: W. T. Jocoby, Chas. A. Kiehl, J. E. Bonton, C. W. Everett, Red Poultry Yards, Geo. W. Tracy, etc.

In R. C. Reds the winners were A. M. Anderson, Louis Anderson, Beyer & Morrison, J. G. Spencer, C. O. Hattersley, etc.

In Dark Cornish there is a sad tale to tell. Mr. John W. Ward of Pennington, N. J., this country's leading breeder of this variety, had his entire exhibit and including all his best birds smothered by the express company while in transit. In the lot was his famous cock birds "John Bull" and "Uncle Sam," two birds above value. They were winners at our best and largest shows and the kind money can't duplicate, also some of his best young and we believe other imported birds. This loss is to be regretted and we hope it won't dampen the fancier's spirit of Mr. Ward, although his loss must be above $3,000, at lowest estimate. Mr. Ward later sent up other birds and still won: Cock, 2-3; hens, 2-5; cockerel, 2-3; pullet, 1-4-5.

Leghorns are always strong here and this season the Browns in both combs, Buff and Whites were grand large classes. The S. C.

Superb Type and Superior Quality

January and February Hatched Youngsters for Sale

Never have I had young chicks prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These are ready for delivery now—large, vigorous, massive birds raised on acres of blue grass sod.

Older Stock at Bargain Prices

Due to the fact that I must make ready for this younger stock, it will be necessary to dispose of a number of hens and cocks on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock, the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000 acre Elmendorf Farm. An extra fine lot of young Duroc-Jersey pigs for sale.

The Best Bird Will Win

At the 4th Annual Show of

The Poultry Exhibition of Pittsburgh, Inc.

January 18 to 23, 1915

Entries close Jan. 7, 1915

The largest and finest Hall in the country. We have engaged the following judges:

W. H. Card
C. D. Cleveland
A. Fred Kummer
J. C. Punderford
Irving F. Rice
H. P. Schwab
W. C. Pierce
W. Theo. Wittman
Theo. Hewes
L. Rawnsley
J. H. Lewis
Wm. F. Auerswald

Brown class was one of extra value. In the S. C. Whites the following were winners: W. H. Williams, Miller & Schuneberger, Pastime Farms, Endicott Farms, H. C. Wack, Eden Poultry Yards, etc.

Orpingtons were seen in fine quality classes. The Old Forge Poultry Farm, Spring Grove, Pa., winning on Buff, which are their specialty: Cock, 2; hen, 3-5; cockerel, 2-4; pen, 3. This is a very select line.

Mr. John Arnot won first hen on a rare beauty.

In Blacks the winners were Umholtz & Kleine, Wm. J. Gerogius, Marvin & Handshue and Mr. Kilpatrick.

Large classes of White Cornish were exhibited and the display of Hamburgs, Polish, Lakenvelders, Houdans, Anconas, etc., were complete.

Ducks and geese were extra large and fine classes. Turkeys, very small classes. Bantams numbered over 400 entries and formed a beautiful display. Pigeons as usual were a feature exhibit, one of the best ever seen here, and numbered 1,406 birds.

The judging as a rule and with but two exceptions was very good and the exhibitors very well pleased. We have thought proper to compliment Mr. Chas. D. Cleveland for his work was surely painstaking and most satisfactory. The great classes were very trying and the heat most unbearable. Under these conditions such splendid service is to be commended. There was another judge, Louis P. Graham, whom we also congratulate for the service rendered. Besides his own classes the exhibitors in several other classes asked the management to assign him to their classes and he worked hard for two days. His work was above reproach. In Barred Rocks as well as in Leghorns it was perfection.

The attendance was great. While not as large as usual, they say, still the poultry building was chuck full daily.

Chicago Premium List Is Now Ready.

The premium list of the great Coliseum show is now ready for mailing. The list of cash and special prizes was never before equalled. Every breed and variety is well provided for, while many of them exceed that of any other national show ever held. Rhode Island Reds, with $800 in cash and ten cups; Silver Wyandottes, with $150 in cash and ten cups; Light Brahmas, with $70 in cash and club ribbons. The association is offering an elegant diamond scarfpin for the best display in every variety, Standard and non-Standard, where there are 125 or more entries. Should this prize be awarded to a lady, she may have her choice of the scarfpin or a diamond ring. This is the most valuable prize ever offered at any poultry or live stock exhibition in the United States. From information received, the Buttercups, Sussex, Campines and Blue Andalusians will be a show of themselves.

One of the new features for 1914 is the championship ribbons on many of the classes for best male and best female; and in all Bantams for best display in the several varieties.

Entry fee for Bantams for the 1914 exhibition has been reduced to $1.00 on single birds and $3.00 on pens.

There will be a $5.00 cash championship on Barred Rocks for best colored male and best colored female in the exhibition class; also $5.00 for the best colored pullet-bred male and $5.00 for the best colored cockerel-bred female.

All exhibitors of the 1913 show will receive a premium list without request. Others are asked to send in their names at once. Show dates are December 11-16. Entries close positively November 25.

1st Pullet N. Dak. State Fair 1914

Big Profits this winter—eggs and poultry will be higher than ever before. Buy your laying and breeding stock now, for such stock will be high and scarce before spring. We raised nearly 10,000 birds this year but they are going fast because prices are reasonable and quality is excellent—However we still have several hundred pullets and hens and many cocks and cockerels for early buyers. Better write now while our stock is complete and we can supply exactly the type of bird you want.

Trapnested to lay 160 eggs or more a year. Every Ferris Leghorn is bred to lay—even our best exhibition birds must have records of 160 eggs before we breed from them. For 14 years our principal object has been to produce heavy layers. Today Ferris Leghorns are known the world over as egg machines, and they lay as well in winter as most breeds do in the spring.

Winners Last season's record of 35 first and 41 second prizes at 13 big shows proves conclusively that Ferris Leghorns have no superiors from an exhibition standpoint. This season they started out by winning every first and second at the recent North Dakota State Fair and the W. Michigan State Fair. Watch our winnings this fall and winter. For a complete list of last season's prizes see our free catalog. If you want winners for your show we have them—and the prices are right.

Prices—good utility stock—hens and early pullets $2.50 each; cocks and cockerels $5.00 each. Best laying-breeding stock $3.50 each for hens and pullets; $7.00 for cocks and cockerels. Good exhibition-breeding stock $5.00 for females, $10 for males. Exhibition stock $7.50 and up for choice hens and pullets, $15 and up for males. Pure, white, large, long bodied, with good head points, low, well carried tails and typical shape in all sections, these birds will win in any competition. Look at our catalog and see the prizes our customers are winning every year.

Guarantee Satisfaction or money back. Return birds at our expense if not satisfactory and money will be refunded. All stock insured for 30 days. We stand all the risk of change of climate and REPLACE FREE every bird that dies or gets out of condition. Before you buy, find out whether any other breeder will do this for you. Our success depends upon yours, and we do everything possible to help you succeed.

14 YEARS of careful breeding and square dealing are back of Ferris Leghorns. Better layers and better exhibition birds every year; this year's birds so good their quality will surprise you. Line-bred so many years, their good qualities are bred in the bone and make your success assured.

80 Page Catalog tells the whole story—it's free. Testimonials from every state; complete description of our plant and methods, how we developed laying and exhibition qualities, views of farm and stock, exact descriptions of the birds we sell at various prices, and all the information you will want to know before buying. If you need stock now, or eggs or chicks next spring, write us. We will be glad to quote prices and give all possible information.

The Only Grit

Can Increase Your Profits

THE ONLY GRIT has been used exclusively at the North American Competition held at the Ingleside Poultry Farms, Thorndale, Pa.

This Egg Laying Competition has broken all records and will become fixed as the greatest achievement in poultry history, and no small part of the wonderful laying records is attributed to THE ONLY GRIT. The rate of mortality 1% is the lowest ever recorded in any egg laying competition.

HAVE THE ONLY GRIT available for your fowls at all times. Your dealer will supply you with it. If he does not handle THE ONLY GRIT send us his name and address and ask us for samples and prices.

Crowther's Red

ARISTOCRATS

FIRST COCKEREL
At Madison Square Garden, 1913-1914

We have cockerels and pullets that for type and color are almost too grand for description. Bird after bird—almost duplicates—and some better than our **Madison Square Garden Blue Ribbon** Cockerel and Pen, which were conceded to be the best Red specimens ever shown in America.

Get our prices. Get started at once with this **"Aristocrat"** blood—the oldest, cleanest bred line of Reds before the public. Write for pictures showing development of "Aristocrats" sturdy type from chick to maturity.

Remember there is hardly one successful breeder in America who has not at one time or another used **Crowther's "Aristocrat"** blood to make success possible.

Show and breeding birds fit for a King, Rose and Single Comb Rhode Island Reds.

IRA M. CROWTHER

PRODUCTIVE POULTRY HUSBANDRY

(Revised Second Edition)

By Harry R. Lewis, B. S.

This book contains 536 pages, 329 illustrations, is fully indexed and put up in handsome cloth binding. It is one of the most comprehensive and valuable books on poultry ever offered to the poultry world. The text is so arranged that it will meet the needs for systematic reading courses, for farmer's clubs, poultry associations and granges. To the farm poultryman the text clearly pictures methods which would enable the average farmer to keep from two hundred to five hundred birds, as "side line" to general farm operations, and realize a handsome revenue.

The contents of this great book is as follows: Introduction—The Teaching of Poultry Husbandry; Choosing a Poultry Farm; Making a Successful Start; The Breeds of Poultry; Selection of Stock; Principles of Poultry House Construction; Practice of Poultry House Construction; Equipping the Poultry House; Yards and Yarding; Principles of Poultry Feeding; Feeding Stuffs; Practice of Poultry Feeding; Principles of Poultry Breeding; Practice of Poultry Breeding; Management of the Laying Stock; Management of the Breeding Stock; Anatomy and Physiology of the Fowl; Formation of the Egg and Chicken; Natural Incubating and Brooding; Artifical Incubation; Artificial Brooding; Care of the Growing Stock; Broilers, Roasters and Capons; Fattening, Killing and Dressing; Marketing the Products; Records, Accounts and Advertising; Exhibiting and Judging; Diseases, Parasites and Enemies.

In order to get a copy of this great book into the hands of each and every one of our readers, we have made arrangements with the publishers whereby we can furnish you with a copy of **Productive Poultry Husbandry** and a year's subscription to American Poultry Journal at $2.50; or a copy of the book and three years' subscription to American Poultry Journal at $3.50. The price of the book without subscription is $2.00. At these prices we prepay all carrier charges. Order your copy, today address

American Poultry Journal
542 So. Dearborn St., Chicago, Ill.

The Palace Show.

When December 1 comes around New York City will see what, with very little question, will be the finest, most complete and thoroughly up-to-date poultry show ever presented to the poultry world. Its scene is to be the Grand Central Palace, close to the noted Grand Central Terminal on Forty-second street, and one of the city's most remarkable exhibition buildings. The show that is to be given there is the eighth Palace Show. It is widely known everywhere throughout poultrydom as the "Big Eighth" and is of marked importance in the poultry breeding industry for the reason that it opens the poultry show year over the country. A year ago this Palace Show was given the name of the "Lucky Seventh," and it well justified this title. This year's show is being called the "Big Eighth," and it looks as if this would be an exceedingly appropriate name.

How many exhibitors and exhibits there will be no one can tell as yet, but it seems very likely that every record will be beaten and every anticipation excelled. This is to be a show that can best be described as "wonderful." Outside of the regular features that distinguish every poultry show it is to have—and an additional floor of the Grand Central Palace has been engaged for this purpose—a model poultry farm of full size, where all the processes of breeding and marketing are to be carried on along the most modern scientific lines. Not a detail will be omitted, and if the Palace Show had no other attraction it would be well worth the while of every breeder in the country to come to New York to study with care the newest systems for the profitable production of poultry that will be shown here.

To the poultry breeder the Palace Show has one remarkable phase that makes it of the highest possible value to those who patronize it. The experts who are behind it foster with the greatest care and expenditure of many dollars the specialty clubs in poultrydom that are so rapidly increasing and becoming yearly greater factors in the industry. A year ago the Palace Show made an especial point of Buttercups and gave this breed international fame. This season it is to continue its Buttercup campaign and in addition to inaugurate one on Campines. The Empire Poultry Association who give this Palace Show have the keenest regard for these specialty clubs, and their importance in the poultry field, and among the features of this big show of December, will be many banquets and meetings of these specialty organizations, all tending to develop the poultry industry as nothing else will and to firmly cement friendships.

In addition it will be a poultry show along very broad lines, this Palace Show. Those breeders who have fine stocks of White Orpingtons, White Wyandottes, Buff Leghorns, Minorcas, Reds, and White Leghorns should enter without a question. There are to be some famous contests in these breeds, and high honors will go to the winners of these classes.—Cromwell Childe.

The above illustration of the first prize cockerel at the Memphis show, September 26 to October 3, offers convincing proof that photographs of good specimens do not have to be retouched in order to show to the best advantage. There is absolutely no retouching on the picture and the remarkable type and quality of the bird is visible at a glance. Besides winning first cockerel, he also won a number of specials and was the best in the Mediterranean class. There were 350 White Leghorns entered at the show and the quality was the best we have seen for this time of the year. Besides capturing the highest honor in White Leghorns, Mr. Andrews' "Efficiency" strain did equally well in Barred Rocks.

IDEAL WHITE

ORPINGTONS

IMPORTANT NOTICE!

Change of Location, but

NO CHANGE OF MANAGEMENT

The IDEAL ORPINGTON FARM, formerly of Lombard, Illinois, has moved to Dee, Hood River Valley, Oregon, where, on 160 acres of land, we will continue to breed the acme in quality of White Orpingtons. We solicit your continued inquiries and patronage. Mention American Poultry Journal.

IDEAL ORPINGTON FARM

Chas. W. Green, Mgr., Dee, Hood River Valley, Ore.

Seven Acres of Fashion Plates.

When we say seven acres of fashion plates we mean S. C. Buff Orpingtons as bred by A. E. Martz, Arcadia, Indiana, and this is what you will find on his farm. Nothing short of the genius Mr. Martz is, could so cleverly arrange buildings and yards so as to utilize every foot of space to best advantage and handle 2,500 Buff Orpingtons and range raise them on so small a farm, but he does it and is acknowledged the biggest exclusive breeder of this grand breed in the world. Every year sees progress in the quality of his young stock; anything but a golden buff and buff to the skin is practically unknown on his farm and when it comes to type his birds are true to name in every respect. He was never before better equipped to handle show customers and can give greater value than ever in the birds he ships.

So famous are the Fashion Plate Buff Orpingtons and so grand is their long show record, Mr. Martz could rest on his laurels and never show again, but not him, he must be in the game with his string of winners the whole show season. This season he starts off with the great Forest City show with its 5,000 or more entries and as usual he wins three firsts, two seconds, display and minor places. Get his catalogue and get an idea of how his plant is arranged and get his whole show record and other valuable information. Write him for prices of stock and mention American Poultry Journal.—H. H. Coburn.

Mr. Fred C. Lisk.

It is always a pleasure and one of special interest to visit a plant and poultryman like Mr. Fred C. Lisk of Romulus, N. Y., a plant where the owner is the manager and worker and who devotes all his own time to his poultry, for this kind of place spells success, and if improvement and success were ever evident anywhere it was to be seen here.

Mr. Lisk has a beautiful home and poultry plant. Just at the edge of the village and within easy walking distance of the station we found him with overalls and jumper on, busy among his large and extra fine flock of White Wyandottes and we could not help but congratulate him on the appearance of the stock and plant, for all showed up so well, clean and practical.

We have known Mr. Lisk for a great many years and at this our first visit to his place found just what we had expected of him, a plant built for business and comfort, for the correct growing of stock, and also a line of breeders and youngsters of special and great value. The buildings are practical and so arranged to make the labor easy, they are of the open-front plan, roomy and clean, with large breeding yards planted to fruit trees. The young are separated according to size and sex and all have very large yards covering acres of ground with a strong sod covering, and all have plenty of shade and sunshine.

At the time of our visit, October 7, as was expected, we found the breeders in moult, still there were several cocks and hens nearly finished that were showing their true quality. Two yearling cocks in particular were noted that would add glory to any class or show right now. They were full, deep, stood up clean and with great spread tails, fine backs, and full arched necks with small, well-set combs make them as rare a pair as we ever expect to see, two others of the same class were nearly as far along and several others had just about started to moult; one of these Mr. Lisk considers his best and we hope to meet him later, for we do want to see him finished; he surely has the "makings."

In young Mr. Lisk has close to 700 which are now divided into four flocks, two each of cockerels and pullets. Here was a yard of about 100 cockerels that are rapidly nearing maturity; some have arrived at that stage, while others are coming fast. They were an extra even lot with shape a particular feature. In form they were alike broad and deep fellows with excellent strong bone, legs well set and placed, select heads and absolutely pure white with strong red eyes and good yellow legs. Vigor and constitutional strength was evident in all, and we did not see a knock-kneed or green-eyed bird on the place. The yard of younger cockerels was also very interesting and Mr. Lisk would point out promising birds with a pride for which we commend him. He knows his birds, knows what he has been breeding for and knows what he can expect of these. So do we.

The yards of pullets were next seen and here we hated to leave, for here again we found the same quality and the same conditions noted among the cockerels, a rare and fine collection with shape and uniformity the outstanding feature.

The yards all have a south and west slope

Big book ad on page 1290

GOLDEN QUEEN

Won 4th at Boston 1913 and 1914, and laid **248 eggs in a year** or 20⅔ dozen, weighed 31 ounces to the dozen, nearly 6 times her own weight. Twenty of her pullets averaged 216 eggs a year. **My stock,** the kind "that lays, wins and pays." **World's Best Buff Rocks,** "as above." Also Barred and White Rocks, Wyandottes, Orpingtons, Leghorns and R. I. Reds. Grand pedigreed cockerels out of 200-egg hens. Also pullets and the hens themselves. Leading winners 1914 Fall shows, Syracuse, N. Y., Vermont State Fair and Brockton.

Sunnyside Poultry Farm, Box 1002, Bristol, Vt.

STILES' COLORED Leg Bands

Grain and Shell Mill, $5.00

Wilson Bros.
Dept. 201, Easton, Pa.

and as we stood at the entrance for a look back over the heavy grass-covered yards the youngsters in their pure white dress flecked the surface in all directions, a sight impressive and one long to be remembered.

Mr. Lisk's birds have years of his careful breeding back of them and also a most excellent show record, for birds of his breeding have won in his hands and those of his customers at most of the leading shows East and West, including Boston, Chicago, Baltimore, Pittsburgh, Indianapolis, Rochester, Elmira, Syracuse, the Auburn (N. Y.) A. P. A. show where on 10 entries he won cock 1-2, hen 1-2, cockerels 1-3-4, pullets 1-3, pen 1, and twenty or more special prizes.

Mr. Lisk is in the poultry business to stay. He knows the breed and their demands and his every effort is to please his customers, which he does, for he entertained us for over an hour showing us letters from the satisfied buyers of the past year or two. He now has a grand lot of birds for the early shows to offer and will have them fit for any show any time this season. Here is a breeder and a line man we are pleased to recommend for such are most worthy of every success—it is their due.—H. P. Schwab.

Rose Comb Rhode Island Reds.

We always have our expectations keyed up when we visit Mr. D. Williamson, owner of Longfield Poultry Farm, Bluffton, Ind., and we are never disappointed, either with this genial gentleman's welcome nor the wonderful quality of his Rose Comb Reds. Mr. Williamson is one of the veteran breeders of high-class Reds. He is still a young man and sees a long and bright future for the Longfield Poultry Farm.

His young stock this season came through with great vigor and he has 1,500 in number. He can fit you out in utility stock, good breeders and show birds fit to win in any show room. The Longfield Rose Comb Reds have won for years at Chicago and other great shows and this year more and still better ones are ready to acquit themselves from coast to coast.

Mr. Williamson was among the first to use very dark red birds and now there is no demand for any other color; dark red being the most popular color in the show room today. Write for prices on exhibition cockerels or any class of birds you desire.—H. H. Coburn.

Wilburtha's New "General Staff."

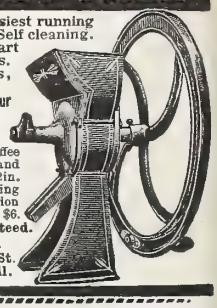
Just take note of what's recently happened at the Wilburtha Poultry Farm, Trenton Junction, N. J. Then add to that its past splendid record and you'll probably agree that it bids fair to win some of the greatest battles for poultry supremacy, both at the show and in the yard, ever waged.

Here's what's happened: Mr. Charles J. Fisk, the owner, after much sifting, weighing, eliminating and other processes in selecting the right management, announce the following:

Mr. Geo. Kerr, formerly manager of Dune Alpin Farm, East Hampton, Long Island, is to be general superintendent. As a breeder of Leghorns and manager, Mr. Kerr has no peer. His reputation is nation wide. He brought with him the entire lot of wonderful prize winning S. C. White Leghorns from Dune Alpin and is to personally manage the birds of this breed at Wilburtha.

Mr. D. C. Keyler, formerly with Mr. C. D. Cleveland, Sunnybrook Farm, Eatontown, N. J., is to have charge of the Columbian Plymouth Rocks and Columbian Wyandottes. He, too, is second to none with his breeds.

Mr. Thos. Lockwood, formerly superintendent of Monmouth Farms, Freneau, N. J., is to have charge of the incubating and brooding. With his long extended and highly successful experience in this line and with Wilburtha's splendid equipment, this farm's ability in the custom-hatching and baby-chick line will certainly be greater than ever, and it has long held a foremost place in this respect.



Now add these recent events to those of the past. Put these men at work with the birds that have won hundreds and hundreds of honors and have always been "one shade better" than the others at Madison Square, Grand Central Palace, Hagerstown, Allentown, Paterson, Plainfield, Red Bank and other shows innumerable, and what have you? An array of talent, judgment, experience, birds and equipment that's invincible.

Wilburtha is going right on supplying its much-envied consumer trade in New York City with "24-hour eggs," and big tasty broilers. Utility is the first consideration and breeding must be to that end. Wilburtha birds, comprising "the best all around strains of the best all around

breeds," have fine laying habits in addition to "fine feathers."

Don't you think that with the present personelle and investment in birds and equipment it is imperative, more than ever, to sell nothing but the best of breeders, the freshest of eggs and the finest of broilers?

Better send in your name today for the big Wilburtha catalog about to be sent out. It's a beauty. Free, too.

—o—

Single Comb Reds.

B. H. Scranton, of Rising Sun, Ind., has again outdone the quality of his Single Comb Reds. When I visited him in early September he had cockerels with finish enough for the show room, the grandest I ever saw, and his pullets will never be beaten for beautiful color. Mr. Scranton has great skill in mating Reds and he is never defeated in the show room. The past season he has had wonderful success with his young stock, this to a great extent due to the great vigor in the parent stock. The quality is not all in the young stock, his hens are molting red and his cock birds are retaining wonderful color. The Scranton Reds are models of type and he lays great stress on fine head points.

He is in position to furnish winners for any show room and has a goodly number of utility birds to sell. Get one or more of those wonderful cockerels. Write for them today; they are going fast.—H. H. Coburn.

—o—

A Visit to the Poultry Plant of Eugene C. Smith.

It has been the writer's pleasure to visit a great many poultry plants, both large and small, from those breeding the "best in the land" down to those simply "raising chickens," and in all our travels never, at any time, have we seen a more thoroughly conducted, down-to-date plant than that of Eugene C. Smith, 317 Galena boulevard, Aurora, Ill., and this goes without any apologies.

Mr. Smith is one of the most enthusiastic breeders in the business today and is the greatest student of the mating proposition with whom we have ever talked on the subject. He knows a White Leghorn from "A" to "Z" and knows how to produce them. Many breeders produce an occasional "happen-so" good one, but not so with Mr. Smith; the same uniformity of type, snow-white plumage, prevails throughout his entire flock and all show the same graceful, racy type, with the beautiful curves, without which you cannot have real Leghorn type.

In one yard we saw twelve pullets which Mr. Smith had selected and started to condition for his customers for the winter shows, and in our opinion they are the twelve best we have ever seen in one yard. All had excellent five-point combs, correct type, splendid backs, low spread tails; in fact, they showed such uniformity of type that it was difficult to distinguish one from the other. The un-retouched cuts of two four-months' old cockerels, printed elsewhere in this issue of this journal, gives a good idea of the prevailing type of males bred on this plant.

Mr. Smith just furnished one of his customers with a cockerel that won the blue in the largest class of Single-Comb White Leghorns ever shown to date.

He informs us that he has shipped his stock this season to a large number of shows,

FISKE'S WHITE LEGHORN'S

Those Prize Winners You Want; Order Now
RIGHT NOW, I have some particularly promising S. C. Whites. Every time I look my birds over, it makes me feel mighty cheerful. Some of them are such exceptional ones I shall dislike very much to part with them, but my business is selling birds—not keeping them. So here's your chance to get birds of the true Fiske Strain.
Birds that are direct descendants of my great Fiske winners, that have walked away with so many ribbons at the principal shows, all over the country.
Earlier than ever this year, we are getting inquiries about my Tip-Top Class, and sales have been surprisingly brisk.
So if you want some of these likely prize winners; it certainly looks like good sense to get after us right away.
Want some laying pullets at $1.75—or a few yearling hens at $1.50 up?

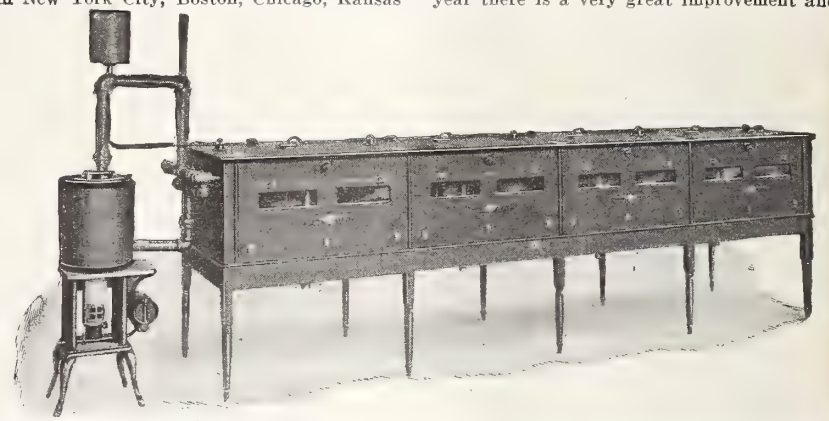
VINELAND - - NEW JERSEY



from the hotbed of White Leghorns in New York State to the far western border of the coast; from the Canadian border on the north to the Sunny South; and in not one instance has the stock sent out by Mr. Smith this year missed winning the blue.

The demand for Mr. Smith's Leghorns has increased by such leaps and bounds the last few years that he has been unable to keep pace with the demand. This bears testimony to the fact that the Single Comb White Leghorns bred and raised on this plant are all that is claimed for them—"As Good as the Best"—while at the same time it speaks volumes for the honesty and integrity of Mr. Smith.

Mr. Smith's catalog is one of the neatest we have seen and will be gladly sent free upon request to those interested.—J. C. Johnston.

Cyphers Semi-Mammoth Incubators Now on Sale.

Cyphers Incubator Company, Buffalo, N. Y., with branch stores and warehouses in New York City, Boston, Chicago, Kansas City, Mo., and Oakland, Cal., has placed on the American and foreign markets what it calls the Cyphers Semi-Mammoth Incubator, doing so in response to an increasing number of requests for hatching machines of 1,200 to 3,000-egg capacity that embody the patented principles which have made mantled at will. Each egg chamber has four egg trays, each tray holding 100 hen eggs, which size makes these trays easy for man or woman to handle.

A highly important feature of the Cyphers Semi-Mammoth is that every egg chamber has separate regulation, thus taking care of the animal heat, as incubation progresses and also doubly protecting all eggs against harmful variations of temperature. One chamber or compartment at a time can be filled with eggs, then a week or so later another can be filled, each to be regulated separately as conditions may require during the Cyphers Company lamp-heated incubators world famous. An illustration, made from photograph, is shown herewith of a Cyphers Semi-Mammoth that holds 1,600 eggs and is heated by a blue-flame oil stove. Larger sizes are heated by gas or hard coal.

As may be seen in the picture, this Semi-Mammoth does not require a heater pit, nor call for the handling of coal or ashes. The machine stands free on the floor of any apartment and can be moved about or dis the first, second and third weeks of incubation.

See advertisement of this latest "wholesale hatcher" on another page of this issue and when writing to Cyphers Incubator Company for descriptive circular and price list please mention the American Poultry Journal.

Aldrich Farms.

I have had the pleasure for the past three or four years of visiting annually the wonderful Aldrich Poultry Farms adjoining Columbus, Ohio, and each year I find the quality of the stock much improved. This year there is a very great improvement and a much greater per cent of the best White Orpingtons to be found anywhere. Visitors come from all parts of the United States to see these birds and Mr. Aldrich has obtained some very long prices for birds for the early shows.

The Aldrich method is to hatch and raise chicks with hens. This natural method gives great vigor and hustling qualities. There are two thousand ready to win anywhere at any time. It will be remembered by lovers of the beautiful White Wyandottes what winnings the Aldrich Poultry Farm birds made at Chicago and Madison Square Garden last year. This is only a part of their long show record. If you want to be sure of a blue ribbon get in touch with the Aldrich Farms and write them stating just what you want and get one of their fine catalogues that shows the farm, buildings, and birds most satisfactorily. Write now.—H. H. Coburn.

GOLDEN WYANDOTTES
I have bred them for nineteen years. I won nine out of a possible ten firsts at Boston, 1913 and 1914. I have stock for sale that will improve yours, or will start you right in breeding these beautiful birds. LOREN H. BROWN, Lock Box 16, Lunenburg, Mass.

Blencoe's Anconas

Pullets laying since July 7. Great show Cockerels—Rose and Single Comb. Write me if you want a really good bird.
MRS. GUY BLENCOE Alma Center, Wis.

A Few Facts About Keeler's White Wyandottes.

There have been many attempts made by the writer and others to do justice to Chas. V. Keeler's White Wyandottes, and Keelerville through the columns of American Poultry Journal. This time we are going to leave Keelerville to be seen by the eye or through the beautiful and well-written catalogue Mr. Keeler puts out. The free use of printers' ink doing its part for the phenomenal success of Mr. Keeler and his White Wyandottes.

We positively cannot describe the quality in mere words: it takes the eye to grasp that. Every year we think his Wyandottes are as near perfection as White Wyandottes can be bred, but each succeeding year we see a great improvement in the size, type, head points and snowy whiteness of the youngsters, and each year we see how the old birds stay white, regardless of the sun or hot weather. The fact is, Mr. Keeler has experimented with adverse conditions to test their stay-whiteness and they come through stay-white.

Mr. Keeler is among the few successful ones who succeeded in raising a large number of young stock and without loss to the old birds, but Keelerville has abundance of shade and fresh water to make them comfortable and being range raised for years and years they have the vitality to combat any extraordinary weather conditions.

If we tried to describe the birds in detail we could not pass a one without raving over its individual merit, and space would forbid that. Again, if we just gave Mr. Keeler's long list of winnings it would be as monotonous as a weather report, in that it would be the same thing over and over, namely: 1-2-3-4-5 cock, 1-2-3-4-5 hen, 1-2-3-4-5 pullet, 1-2-3-4-5 pen, special grand champion, etc., etc., for show after show, year after year. As before stated, we will let you visit Keelerville or draw your conclusions from the above-mentioned catalogue. Write today for prices and be sure to state definitely just what you want. Mr. Keeler has booked many shows to judge as his services in that capacity are much sought after.—H. H. Coburn.

Get Right on Poultry Supplies.

Write Otis & Moe Manufacturing Co., Otis Building, Chicago, for their complete free catalogue No. 5, just issued, which describes the many new and useful devices for the poultry raiser added to their line since last season. Among these is a Sectional Oat Sprouter, advertised elsewhere in this issue, that will appeal to all poultry raisers.

There is nothing like green food in the winter time for increasing your egg yield when prices are high. This sprouter is made in adjustable sections adapted to any size flock, for as your birds increase in number add another section, and each section increases your green food capacity for 50 more fowls.

Made entirely of heavy galvanized iron, with no wood to warp or fall apart, and with a special fresh air feature that prevents the grain from moulding or becoming sour, but supplying plenty of heat and moisture at the same time.

Any breeder that has used one of these most convenient devices would not part with one for the price of two.

Leg Bands

Tell the Age of Poultry

Tell which are yearling hens and which are two year olds. For laying purposes it does not pay to keep hens after the second laying season. The pullets and the yearlings are the profit makers.

LEG BAND your birds and then you will know which to keep and which to kill or sell.

Our bands are made from heavy aluminum, have smooth edges, locks with double clamps, are numbered with large **RAISED FIGURES.**

Prices, either kind:—12-15c., 25-25c., 50-40c., 100-65c., 250-$1.50, 500-$2.75, 1000-$5.25.

Sunlight Poultry Farm.

Three miles from Lynchburg, Ohio, on branch of B. & O. Railroad, 50 miles from Cincinnati and a half mile from C. & C. Traction line at Dodsonville we find Sunlight Poultry Farm, busy as a bee and making good with the wonderful business-getter, the Single Comb White Leghorn. Mr. Ernest N. Lemon is the man behind the gun, and this is his first introduction to the readers of American Poultry Journal. He wisely started with the best strain of heavy layers obtainable and his whole aim is great egg production.

His farm is well adapted to poultry raising under conditions to produce health and vigor. The farm is well drained and has a supply of fresh water and plenty of shade to grow the youngsters right. He is the only breeder we know of who has no special pen but allows his one thousand head to have range the year round. No wonder they have vigor and that the baby chicks can stand any journey and live.

The male birds that head this flock are grandsons of Edward XLIV, the best cock ever shown, winning first at Cincinnati 1913. Last season Mr. Lemon had pullets on range that began to lay when 134 days old without any special feeding. Mr. Lemon handles a big egg trade and does a fine baby chick business. His prices are reasonable for males and he ships quality as well as utility.

His incubator cellar is 48x14 and has a capacity of 5,400 eggs, brood house is 54x14 and broods five thousand at a time, he has one building 12x36 and 25 colony houses and building more this fall. He is a strong advocate of fresh air colony houses if it does require a little more labor to care for the stock. He also has a cockerel house 15x15.

Sunlight is a strictly up-to-date poultry farm and run on original plans. Write today for a cockerel or as many as you need, they will bring up the egg yield of your next year's pullets.—H. H. Coburn.

Holterman's Barred Rocks.

On my annual visit to W. D. Holterman, Ft. Wayne, Ind., I was surprised to see even better quality in his Aristocrat Barred Rock youngsters than ever before, and this is a broad statement, as they looked like perfection last year. We pronounce Mr. Holterman nothing short of a wizard in mating so as to produce even, narrow barring, and right here we will state that his son Louis is an apt scholar and a close second to his father and is much interested in producing the best Barred Rocks.

Mr. Holterman is one of the never-give-up stayers and determined to win and he has the satisfaction of seeing his business grow each year and is making good for the reason that he has goods to satisfy his customers and they come again. When Mr. Holterman says a Rock is narrow barred to the skin it is narrow barred and the purchaser can depend on the description not being overdrawn but identical with what the bird really is. It is a pleasure as well as a sound business proposition to do business with a man so honest in his dealings and he gives more in actual value than he leads you to expect.

In spite of the hot, dry summer in Indiana he has succeeded in raising over 2,500 Aristocrats, showing they have the vigor to overcome adverse conditions. His young stock have a beautiful grove to shade them and are raised under the best possible conditions and management. Mr. Holterman never has to go outside of his own matings to introduce a little new blood to keep up the wonderful vigor and vitality as he has two distinct families. The Aristocrats have won at 144 shows the past two seasons in the hands of his customers and are ready to cover that number this coming season. He puts out one of the most beautiful catalogues which is sent upon request. Write him today for prices on cockerels or as many birds as you need to complete or make your show string. He can fit you out to win and his prices are within reason.—H. H. Coburn.

Faulds' Black Minorcas.

It is with great pleasure that we call our readers' attention to a booklet just issued by T. A. Faulds, of London, Ont., Canada. This booklet contains letters from Mr. Faulds' many satisfied customers, also the winnings of his great S. C. Black Minorcas and Rhode Island Reds. It's free for the asking. Mr. Faulds has some bargains in show birds and can fill your wants with entire satisfaction. See his ad elsewhere in this issue. He won the prize at London Poultry Show as the most popular exhibitor.

Productive Poultry Husbandry.

We are just in receipt of a copy of the revised second edition of the above named book by Harry R. Lewis, B. S. This book is one of the most comprehensive and valuable books ever published on the subject of poultry. It is cloth bound, contains 536 pages, 329 illustrations and the text is so arranged that it will meet the needs for systematic reading courses, for farmers' clubs, poultry associations and granges. To the farm poultryman the text clearly pictures methods which would enable the average farmer to keep from two hundred to five hundred birds, as a "side line" to general farm operations, and realize a handsome revenue. The book is fully indexed so that you can tell at a glance where to find information pertaining to almost any point about which you might wish to know. The price of this book is $2 and certainly is well worth the price asked. J. B. Lippincott Co., Philadelphia, Pa., are the publishers of this book. We make a special combination price on this book with subscriptions to American Poultry Journal. All orders for the book should be addressed to American Poultry Journal Pub. Co., 542 S. Dearborn St., Chicago, Ill.

Selecting the Male for Your Pens.

It seems to be universally agreed among the most successful and especially the breeders for improved egg production, that too much care cannot be given to the selection of the male that you are going to mate to your females. It used to be a common saying among the breeders that the male was half the pen, which, in a sense, was the least he could be, but now it is admitted that when it comes to results in the offspring, it all depends upon the breeding back of the male, and quite often he is almost the whole thing.

The shrewd breeder nowadays is not entirely ignoring the utility of egg laying side of his strain, but is seeking a combination of the two, fancy and eggs or eggs and fancy. One of the oldest and most successful breeders of this class we believe is Mr. J. W. Parks, whose strain of Bred-to-Lay Barred Plymouth Rocks are said to have simply laid their way into universal popularity. His strain in addition to over 25 years of careful breeding for eggs must have been kept pretty close to the standard requirements to have made the winnings they did the past season, and on his list can be found a number of Madison Square Garden winnings for customers, showing that our greatest breeders are looking after the utility end of this breed.

Mr. Parks' new large cockerel circular has just reached us and in addition to giving a full description of his cockerels, sure gives a good account of the work of his strain in his customers' hands. This circular is sent free.

B. H. Scranton, of Rising Sun, Ind., turned the trick at the Great Hagerstown Fair, winning with his S. C. Reds 1-2 cock, 2-3-4 hen, 1-5 cockerel, 1-2-4 pullet, 1st old pen, 1st young pen, special for best Red male in class and some color and shape specials. This certainly is great.—H. H. Coburn.

Feed Hens Sprouted Oats for Full Egg Baskets

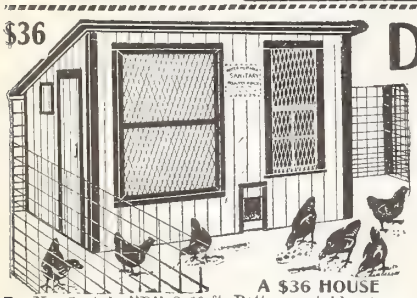
What are you doing to get some of this big money? What are you doing to get **extra eggs?** Have you got a Grain Sprouter? A sprouter is as much a part of the equipment of a successful poultry farm as healthy fowl. Simply because it produces the kind of green feed that

—Increases Egg Production 50%;
—Makes Some Hens Lay Double Quantity;
—Helps Pullets Lay Before Winter;
—Fattens Them and Cuts Feed Bill in Half.

Every extra egg counts. 100 hens should bring you $5.00 extra weekly if the feed is right. For this purpose, nothing equals the

Reliance Grain Sprouter

It makes 3 to 4 bu. of the **snappiest, juiciest and most tender sprouts** imaginable—all from 1 bu. of dry grain. This kind of feed is a **natural tonic and regulator**—keeps birds in perfect condition, too, besides making them profitable.



Our No. 2 Reliance Sprouter, Guaranteed Capacity large enough for 100 hens. **Other sizes, $5.00, $8.50 and $11.50.** Order direct or send for literature, pictures and prices of our entire line. **$7.00**

This is the original **double sprouter** made by one of the **largest and best incubator factories in the world.** It has **better heating and ventilating system,** thus insuring sprouts free from mold. Besides, the front of the Reliance **contains more glass** which induces larger quantity of sprouts.

All shipments made on guarantee of satisfaction or money back. Sprouter comes complete, ready to run. **No extras to buy. Send Postal for Literature — or order direct from ad.**

A Day With America's Foremost Red Breeder.

The best time to visit a poultry farm is when you are not expected. It is then when you can see the actual conditions under which the owner raises, houses and cares for his birds. We did not send any advance notice to Mr. Fred E. Harrison of Menominee, Mich., that we were coming and for that reason the description of his farm and his stock can be accepted as a truthful statement of the conditions as we found them on our visit.

In reading the war news in the different papers we often run across the expression that, "the ground was red with the blood of the fallen soldiers." Applying this quotation to Mr. Harrison's farm, we would say that the ground was red with about two to three thousand of the choicest Rhode Island Reds which we have seen for some time. The ground itself is of a peculiar red shade and if this has anything to do with the remarkable color for which Mr. Harrison's Reds are noted, then it would explain the secret of his success. Well can we remember the remarkable lustrous red of his prize winners at the last two Chicago shows, that peculiar sheen in the deep rich under color which runs so uniformly throughout his flock and which could only have been produced by careful mating and an absolute knowledge of the blood lines of the strain.

In describing his flock it is best to describe it in bunches. For instance, in one of the many large roomy yards we saw a flock of fifty pullets not fully matured but showing already prize winning quality; an even shade of lustrous red and remarkable type was visible in these specimens. In another yard and still another and still another and so forth we found in each about fifty cockerels and pullets and the description of the first pen would answer for all of them. In fact, we cannot see how we can give a better description of any of his birds than the description of the first lot.

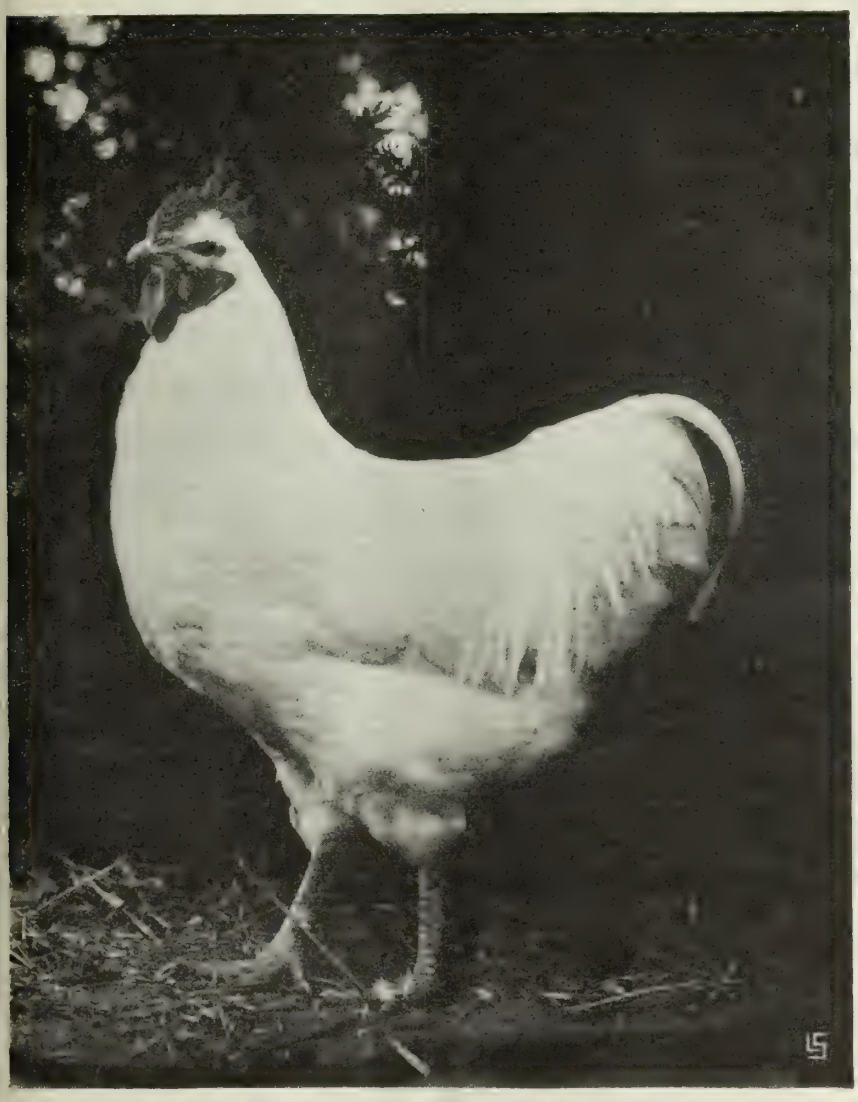
As said before, we arrived unexpectedly and had given no advance notice, and for that reason we did not expect to see the spick and span condition in which we found the houses, grounds and runs. The dropping boards were as clean as they could be and the atmosphere in the houses pure and wholesome on account of the perfect system of ventilation which Mr. Harrison has devised. As his stock is hatched all under hens and have ample room to grow they are all very vigorous and we did not see a sick chicken on the farm.

Mr. Harrison's record at Chicago, Indianapolis and other large shows is too well known throughout the United States and it is not necessary to quote his long string of winnings, but the old saying "that all good things come done up in small packages" holds good, for we have it from direct oral and visual authority that Fred, despite his size of six foot two, is the smallest member and the baby of the family, but we would suggest that he change the spelling of his name as follows: fRED Harrison.—L. A. Stahmer.

Neponset Paroid Roofing.

Neponset Paroid Roofing, which for more than sixteen years has been the standard high grade roofing, is now being manufactured with a new improved gray surfacing. This has been improved in two ways—first in appearance and secondly in permanence. The old style surfacing of Paroid was considered to be the most permanent finish that could be applied, but it is believed that this new finish will outlast the old gray finish by years.

The United States Government has just purchased 172,000 square feet of Neponset Paroid Roofing, making a total over 1,500,000 square feet which it has used at Panama alone. These orders are only some of the many others which the government has placed for this roofing.



The secret of the success which Neponset Paroid Roofing has had is due to the care with which it is made. It is the very best roofing of the sort that it is possible to produce, being made of only high grade materials and constructed with one idea foremost—permanence. It is made by us from start to finish and it is made slowly. A slowly made roofing is a slow wearing roofing. When you buy a "hurry-up" roofing, you save money on its first cost only. You will have to re-roof two or three times and pay out eventually more money than for Neponset Paroid Roofing. In every climate, under all sorts of conditions, Neponset Paroid Roofing has been tested. Therefore, when you buy this material you will not get something of doubtful value.

Turn right now to the editorial page and read "What's Your Name."

Carvers' Campines at Hagerstown Fair.

A. A. Carver, Seville, Ohio, writes us as follows: "I have just received a telegram that we won first Golden Campine pen at Hagerstown, the largest fall fair in North America. Made only one entry. Telegram states 7,500 birds on exhibit. It also states best pen shown since last New York show. This pen was raised from our mating headed by first pen cockerel Chicago last year, as you know we won first pen Chicago last year in a hot class."

They further state that their Golden Campines are being line bred from their imported first Chicago pen cockerel, direct from Rev. E. Lewis Jones, and on the females' side from the Golden Campine hen Empress, now three years old and one of the greatest Golden Campine hens in America. She won first in large shows as a pullet and last season won second at Chicago as a two year old, and she looks now as though she would be fit to win at the big shows this winter; in fact, she did win first at the great Cleveland Fair last month. Mr. Carver would be pleased to hear from any of our readers in need of show birds in either of the breeds, as follows: Golden Campines, Red Sussex or Rhode Island Reds. Write him for prices and further particulars, mentioning American Poultry Journal.

"HALBACH'S PRIDE"

"Nuff sed." The above unretouched picture of a young cockerel tells the tale better than a page of descriptive reading matter. Mr. Halbach has not seen this picture before, as we made it on a recent visit to his farm when he was not looking. When we say that a blind man can go into Halbach's flock and pick a winner for a show, we believe we are not stretching it very much, for we have never seen such quality at his place before, and the American Fanciers know only too well that Mr. Halbach has always bred White Rocks that have been winning consistently at some of the largest shows in the country. His great record at the Chicago Coliseum Show, extending over a period of five years, has never been excelled and stands supreme. We saw close to 2,000 youngsters on his farm that will be among the winners this coming season, and it will pay anyone interested in White Rocks to write for particulars to H. W. Halbach, Box A, Waterford, Wis.—L. A. S.

Pape's Recent Winnings.

Charles G. Pape, Fort Wayne, Ind., has just advised us that he won on his S. C. Black Minorcas at Tri-State Fair, Memphis, Tenn., Sept. 28-Oct. 3 as follows: Champion cock bird of show, all varieties competing; gold leg band for best cock bird in show; grand champion cockerel; A. P. A. silver medal for best cockerel; silver cup for best pen; silver cup for best Mediterranean display; first and fifth cock bird; second, fourth and fifth hen; first and second cockerel; first, second and fourth pullet; first and third pen; first and second prize on best dozen white table eggs; first and second on heaviest white eggs. This certainly is a grand record and speaks well for Mr. Pape's Minorcas. If in need of some show birds write him your wants.

The Willows Farm, South Bend, Ind., owned by Frank E. Hering and under the management of Harmon Bradshaw, has started its fall season with a splendid winning at the Illinois State Fair. The S. C. White Leghorns from this farm won sweepstakes championship. Thirty-six Leghorns were entered, 31 were returned prize-winners. Beau Brummel, the splendid Leghorn sire, was entered in the Old Pen class, and won first. This makes four consecutive years that this great male has won at such shows as New York, Chicago twice, Indianapolis and the Illinois State Fair. The Willows Farm is especially strong in females this year. Hens entered at Springfield made a clean sweep in the class. Breeders or fanciers wishing splendid stock at reasonable prices would do well to write the Willows Farm.

Owen Farms' Recent Winnings.

Owens Farms, Vineyard Haven, Mass., made the following winnings at Allentown Fair: 14 out of a possible 20 first prizes; first cockerel and first pen in each of the four varieties exhibited and second pen in three of the varieties, which was equal to two first pen prizes in those varieties. Mr. Maurice F. Delano, the proprietor of Owen Farms, writes us that he can fill the wants of our readers in show birds of any variety that he advertises in his full page announcement on another page of this issue which are as follows: Buff Orpingtons, White Orpingtons, White Ply. Rocks, White Wyandottes and S. C. Rhode Island Reds. Write him your wants. He guarantees satisfaction or no sale.

1,500 Miles on the Road.

Mrs. J. H. Harnly, 2301 Elisha avenue, Zion City, Ill., has begun the season's battle by traveling 1,500 miles, visiting three state shows and carrying off 70 ribbons, 25 first prizes and 20 second prizes. At the Minnesota, Wisconsin and the Illinois State Fairs her birds won the highest honors. At the Cook County (Chicago) Fair Mrs. Harnly made a clean sweep.

ANDREWS PAPER BOX COMPANY

CHATTANOOGA, TENN.

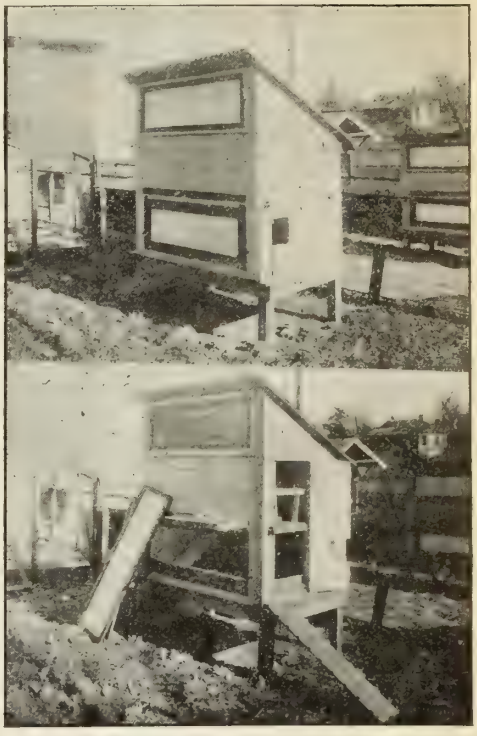
Manufacturers of Andrews Safety Egg Carriers, Baby Chick Carriers, Colony Houses, Exhibition Shipping Coops

Distributors of

Andrews' "DEATHMITE"

a most satisfactory preparation for the extermination of lice and mites.

Birds for exhibition, well cooped, arrive in the showroom in far better condition than when sent in the ordinary manner. You should investigate our colony houses and shipping coops before the winter arrives.



Andrews' Deathmite, $1.00 per box is guaranteed to give satisfaction or money refunded; a very valuable preparation for all poultrymen.

You can't afford to be without our catalogue of Poultry Specialties. Sent upon request.

THE ANDREWS PAPER BOX CO.

The South's Leading Corrugated Fibre Box Manufacturers

View Showing One of the Models of Andrews Colony Houses—the Most Sanitary and Best Devised Colony House Manufactured.

ASK THE JUDGES

First Prize Cockerel at Memphis, 1914
Cut made from unretouched photo.

What O. B. Andrews' Famous Efficiency Strain Barred Plymouth Rocks and S. C. W. Leghorn accomplished at the great Memphis Tri-State Show, October 3d, and they will tell you that my exhibit of fifty-two birds was one of the finest displays ever cooped.

My record was truly a magnificent one in the strongest competition ever seen in the South. The Leghorn and Barred Rock entries were the largest ever seen south of the Ohio River. Just ponder for a moment on one breeder at such a show winning the following-

1st White Leghorn cockerel, 1st Barred Rock cockerel, medal for champion Leghorn male, medal for champion Barred Rock cockerel, cup for best cockerel exhibited from State of Tennessee, also 5th Leghorn hen, 2d Barred Rock hen and 3d exhibition pen. Every bird was BRED and RAISED at Efficiency Strain Farm.

I can't win at all the shows because I cannot make them. I pick the best, however.

What Efficiency Strain has done for me, in my wonderful winnings at Knoxville Chattanooga, Atlanta, New Orleans, Memphis and other great shows—it will do for you. I have hundreds of Rocks and Leghorns in my yards in pink of condition—ready to win for you. Breeding stock—exhibition birds on hand at all times.

If interested in these two grand breeds, why not get Efficiency Strain and have the best?

Barred Rock Eggs, (either mating) from prize matings, **$6.00 per 15**
White Leghorn Eggs, from my best pens, **$4.00 per 15**

If you are troubled with lice and mites, send $1.00 for box of "Deathmite." I guarantee satisfaction or money refunded.

"Ask the judges" and send for beautiful catalogue.

O. B. ANDREWS, CHATTANOOGA, TENNESSEE

Originator-Breeder Famous Efficiency Strain Barred Plymouth Rocks and Single Comb White Leghorns

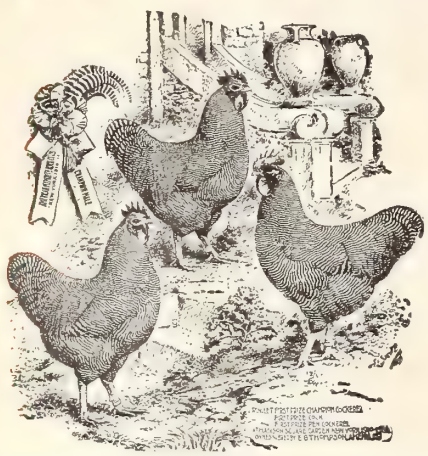
E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.



The Imperial prize of the show, Sweepstakes Special for Champion Male.

Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

GRAND BIRDS FOR SALE

Elegant 70-page catalogue upon request.

AMERICAN POULTRY JOURNAL

It Will Set the Poultry World Talking—Our January Anniversary Number

Does This Look Good to You?

$3.00 Hen That Lays $21.27 in Eggs in One Year

This Is Why There Is Such an Increasing Demand for My Anconas

Sheppard's Famous Anconas

Have made another big sweep at the Cleveland Fanciers' Club big show by winning all the first prizes in both Rose and Single Comb classes, and all the second prizes excepting one. We also won special for best display of Anconas and special for best display of any variety in the big show. They have won first at the world's greatest shows, including London, England, Cleveland and Madison Square Garden, N. Y. For seven consecutive years my birds have won three times as many first and second prizes at the nation's greatest shows as all my competitors together, (including the late shows), so have earned the distinction of being

THE WORLD'S BEST

They are famous egg machines and the greatest **winter layers,** with the wonderful egg record of **256 average for a flock.**

If you want to win at your show or increase your egg production, write for catalogue. Orders booked now for eggs and baby chicks. A fine lot of stock for sale.

H. Cecil Sheppard, Box M2, Berea, O.

President International Ancona Club

VICTORY!!!

Victory! Victory! Victory!

The sound of Victory is in the air. From East and West, from Northland and Southland—from Canada, the States, and South America—from the whole American continent comes the triumphal shout:

VICTORY! VICTORY!

for the

"Aristocrats"

Greater than ever is the amazing record of prizes this wonderful strain of Barred Plymouth Rocks is **winning right now** in the show-room. While their record in this last year (winners in 144 shows) was one to be envied by any strain or family of birds, this season, which is now upon us, will outrival all for performances by far. Reports such as these: "I won **every first** prize competed for with the birds I just received from you" or this one, "I won last week both **first and second** prize with the birds you sent me," or this one, by an old breeder, "the pullet you sent me is the finest I have ever seen," or this one of today, "the cockerel is actually the best exhibition specimen I have ever seen thus far in my career as a breeder," etc., these are simply samples, actual, real samples of the reports I am getting **right now** in my daily mail. These are reports on birds which I have sent out **since September of this year** and are fresh, new, up-to-date.

Do YOU Want to Win?

There is the evidence. Without question—**the Aristocrats are making the most sensational sweep of victories throughout the country ever made by any one strain. Mark this you, who are looking for winning birds.**

Winning cock-birds, **winning** cockerels, **winning** hens, **winning** pullets, **winning** pens of all descriptions—**are ready** for immediate delivery. Still 2,000 show birds to select from. Write quick and get the best selection.

"EVERY SHOW BIRD GUARANTEED."

The Poultry Silo

The Poultry Silo is the coming thing, as it solves the feed problem once for all. Keeps poultry all winter the same as on range in summer—the cheapest and best food possible. Saves time, labor and expense. Complete set of blue prints and full instructions for $1.50, also little booklet "Poultry Silage." Send all orders to The Poultry Silo, Box 35, New London, Missouri.

WORLD'S FOREMOST WHITE WYANDOTTES

REMEMBER, I have bred some of the most prominent winners for such shows as Madison Square, N. Y., World's Fair, Pan-American Exposition and Alaska-Yukon Exposition, and many of the noted winners at Chicago, Indianapolis, Pittsburgh and also in Canada owe their success to my strain. My Guarantee: Stock not satisfactory can be returned at my expense on conditions. I have sold stock for 15 years.

BEST by CONTINUOUS TEST

Is The Unbeatable Record of

Tecktonius-Reed Strains

R. C. S. C. Buff Leghorns

S. C. Rhode Island Reds

An occasional winning fowl, or pen, is not unusual; many breeders produce them, but that don't make a WINNING STRAIN, any more than a "swallow makes a summer". Producing a strain of birds that **sweep the boards** in the big Nat'l Laying Contests and Exhibition Arenas - not ONCE, but YEAR AFTER YEAR - is the unbeatable achievement of **Tecktonius-Reed** "Buffs" and "Reds", in competition with all popular breeds—against America's foremost breeders. This unequalled breeding and exhibition record proves "Tecktonius-Reed's" **breeding methods** to be scientific, and and their strains of "Buffs" and "Reds" to be a dependable foundation upon which poultrymen can rear a brilliant poultry success. Hundreds are doing it today; why not you?

Note Our Attractive 1914 Offerings

Choice of three Varieties (R. C. and S. C. Buffs—S. C. Reds) with Each

Utility Stock	Exhibition Breeding Stock	Exhibition Show Stock	Special Pullet Offer
Good breeding Cockerels $3 and $5 per head. Good breeding Trios, or Pens, $10 and $15.	Hens or Pullets—$5, $8, $10, $15, $25 per head. Cockerels—$10, $15, $25, $50 per head.	Pens—high quality—$50, $75, $100.	Eleven April Hatch Pullets—excellent value—mated to a good, vigorous Cockerel $25.00

NEVER BEFORE HAS OUR OFFERING been of such high quality—never before was your chance for making a "a ten strike" in poultry raising as good as now. In National Laying Contests—1912—our Buff Leghorns led with high average of 249½ per pen - 201 for individual hen.

"Tecktonius" Strain of "Buffs" carried of first exhibition honors for 8 years at Chicago, New York, Boston, Philadelphia, Baltimore, St. Louis, San Francisco, Kansas City, Indianapolis, Cincinnati, New Orleans, Memphis, Des Moines, and scores of lesser shows. Your success as a breeder—as an exhibitor—will be assured with a **Strain** backed by such an array of continuous triumphs. Send us your order today.

Tecktonius & Reed Buff and Red Farm

ROUTE 7 **RACINE, WISCONSIN**

Because you want birds of proven quality—
That's the reason

Rudy's Perfection Strain
White Wyandottes

are bound to please you. They have that pure white color, broad back, perfect head points and well spread tail so much desired in the beautiful White Wyandottes.

I will supply you with birds that cannot fail to please—the kind that will not be overlooked by any judge—birds that you will be proud to possess and that will win the ribbons for you if entered in competition.

Remember, my birds have the reputation of winning the most coveted prizes at the larger fairs and poultry shows.

Send for illustrated catalog and moderate prices.
Satisfaction guaranteed or money refunded.

Geo. H. Rudy, Route 15, Mattoon, Illinois

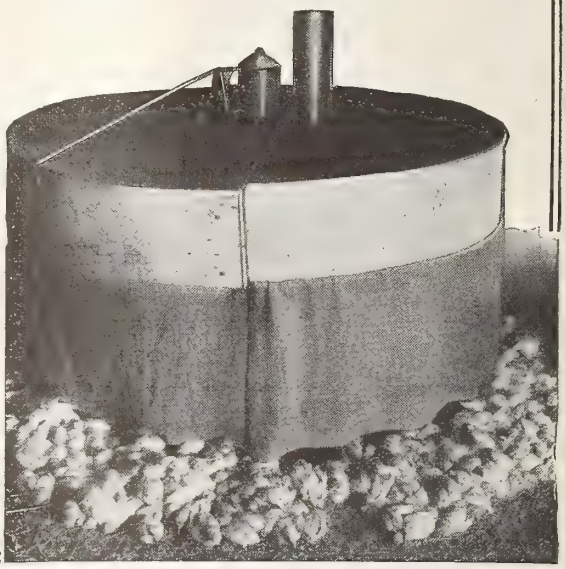
Candee The Big, Fresh-Air Cast Iron Colony Brooder

The heater, the grate, the hover, the depth of the felt curtain, the "breathing space" for the chicks under the hover—everything about the Candee Colony Brooder is BIG.

And best of all, it is built on honor to last a lifetime.

Its heater is all cast iron—a stove for business, with big, quick-heating surface to handle February and March brooding when the chicks need the big volume of heat that a coal stove gives.

Its guaranteed all-woven-wool felt curtain extends nearly to the floor, and positively directs the heated air down over the backs of the chicks; and it saves fuel because, with the felt curtain, you don't have to heat the whole room to keep the chicks warm.



Its Big Features

A Grate of 12 inches in diameter—a safe size.

A Hover 28½ inches high—as high as a table or desk.

Hover 13 feet; 7 inches in circumference.

Section of Hover that swings out of the way for tending, 38½ inches—gives plenty of room for the operator.

Write Your Own Money-Back Guarantee

As a result, also, the room is not over-heated; the chicks have ideal conditions for exercise and a great, big warm hover when they need heat and a place to rest.

Through the Automatic Damper Regulator air is drawn from under the hover up the stove-pipe, and this circulation insures pure, fresh air for the chicks all the time, and healthier birds.

No wonder poultrymen are enthusiastic about the Candee. Read what Harry Tweddle, Proprietor of Beaver Dam Poultry Farm, Montgomery, N. Y., says:

"My chicks are doing fine with my two Candee Colony Brooders. I have 700 with one and 500 with the other. I have used brooders for 15 years and can say that I like yours the best, for it runs an even temperature all the time, uses very little coal and needs attention only once or twice a day."

Regardless of the number of chicks you will be brooding, you owe it to yourself to learn all about the Candee Colony Brooder. A post card or letter will bring you full information as to why the Candee will save your fuel, will give you more birds at maturity and increase your profits.

Candee Incubator & Brooder Co.

Department 2 **Eastwood, New York**

F. E. Harrison's ROYAL RED S. C. R. I. Reds

Are the True ARISTOCRATS of the Rhode Island Red World

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich.

The sun has never shone on three thousand Single Comb Rhode Island Reds that are of the same high class quality as my flock of this 1914 season.

The old adage, "Blood Will Tell," is demonstrated most decisively in the magnificent production of my this year's matings, and these specimens stand out with a pre-eminence that is clearly defined; in fact, the entire farm is alive with **living standard models.**

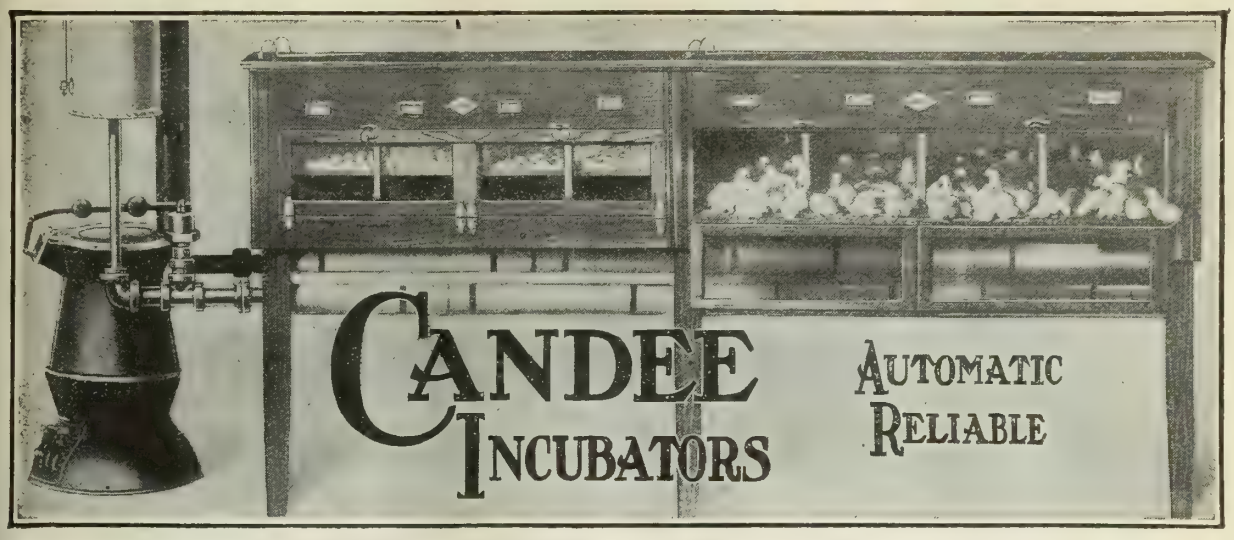
Editor Theo. Hewes, on a visit of inspection to my farm August 31st, stated that never before had he seen any flock that contained so many magnificent show specimens. (Read his report of this visit in the October Inland Poultry Journal.)

In the past two Chicago Coliseum Shows, **Royal Reds** have won nine out of a possible 12 firsts. No other competitor winning more than one.

My show record in national shows is positively the best ever recorded, and **Royal Reds** in the hands of customers are winning the world over.

Remember Royal Reds are the proud product of years and years of careful, conscientious, systematic and scientific breeding, and are the classic strain of either hemisphere.

In four national battles of supremacy, under four different judges, and in four different states in the season of 1913, **Royal Reds** won twenty-two out of a possible twenty-three first prizes; besides, winning every color special, every shape special, every championship and the Rhode Island cup emblematic of the Western championship, given by the Rhode Island Red Club of America.



Note This: There were just one hundred and thirty-six exhibitors competing for these twenty-three first prizes, and when you stop to consider that **Royal Reds** won all firsts but one, you can then imagine the strength of this world's champion strain.

Cocks, hens, cockerels, pullets, trios and pens that have quality to go into any show in the world, for sale. There is no breeder in America that is in better position to furnish you with exhibition birds.

Circular free, and full details for the asking.

F. E. Harrison

Box 30 Menominee, Mich.

Make More Money Selling Baby Chicks Doing Custom Hatching

Turn a 2-cent egg into a 10-cent chick.

Fill any spare space with your neighbor's eggs at $2 a tray—practically clear profit.

That is what the big plants are doing and in a single season their Candees pay for themselves and earn handsome dividends besides.

Baby Chick Plan

All you need is a clean cellar in which to install your Candee. A supply of 60 eggs a day will keep a 1,200-Candee filled to capacity. If your own egg supply is too small, buy from your neighbors who have free range standard stock. You will operate when the eggs hatch the best and when eggs are at the lowest market price. In a few hours, you can arrange for your eggs. The chicks can be easily disposed of at your door or at local stores.

Custom Hatching Plan

The news that you have a Candee quickly spreads and you will probably have more business than you can handle. The Candee trays hold 75 eggs each—a wire partition between prevents mixing of chicks. Whenever you have four trays of eggs you start a compartment. An automatic heat regulator for each compartment holds that setting at just the right temperature as incubation progresses and safety against overheating is automatically assured.

Start at Once with a Candee 1,200

Hundreds of Candee 1,200s are in use. It is a popular size to start with—a perfect success and a proved money-maker. It represents only a small investment and earns money from the very first hatch. Only 11x14 feet of space is required. It comes in two sections and you can set it up in a few hours. Place it in your house cellar, if you wish, as it is approved by the Fire Underwriters and does not affect your insurance. Add extra sections as your business grows. It burns only a few cents worth of coal daily and is cared for in a few minutes. Your wife, son or daughter can easily look after it.

Write for Our Big Free 140-Page Catalogue

More Candees are in use than all other mammoths combined. More colleges and universities teach their students on the Candee. More successful farms use the Candee. More Candee customers increase their hatching capacity.

It takes a big catalogue to tell all these facts, to tell why and how Candee customers succeed. We have gathered all this information in a beautiful book, printed on good paper, 140 pages in all.

Our catalogue shows large illustrations of hundreds of poultry plants, from the Atlantic to the Pacific, in both the United States and Canada. It is sent free upon request.

It describes the 1915 Candee incubators, hot water brooding systems, hot water heaters and colony brooders. Write us today for your copy.

Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.

"The Crow Elk-Hart Jr."

A classy five-passenger touring car, electrically lighted and electrically started, with beautiful stream line body

List Price Between $690.00 and $745.00

A Real Automobile at a Popular Price

Within the next fifteen days, the *Crow Motor Car Company*, of Elkhart, Indiana, will formally announce the completion of a model, to be known as the *Crow Elk-Hart Jr.*

Every mechanical expert who has studied the splendid specifications of this classy little touring car, predicts it will sweep the country.

It will have a beautiful stream line body, oval radiator, full floating rear axle, 101-inch wheel base, electric lights and dimmer, electric self-starter, using the famous Gray & Davis generator system, fine upholstering, air cushions, beautiful royal blue finish, and the most practical motor that has yet been brought out.

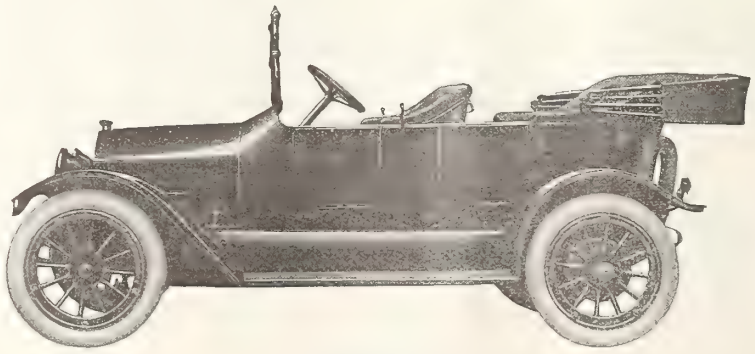
Our mechanical engineers have been working for many months on a car that would be within reach of the average person—a car that would furnish a real automobile value. Here it is at last.

You will find in the *Crow Elk-Hart Jr.* every up-to-the-minute feature used in the highest priced car. It is built of the very best material throughout. It represents the best efforts of our skilled mechanics after seven years' experience in building motor cars that have earned a reputation of being "made to make good."

Every part of the *Crow Elk-Hart Jr.* has been subjected to the most rigid tests. Every part has been thoroughly tried out before it was finally adopted.

There is nothing experimental about the *Crow Elk-Hart Jr.* Like every car built at our factory, it will have our two-year guarantee against defects in workmanship or material.

Although we have not yet issued a single circular telling just what the *Crow Elk-Hart Jr.* will be, we are already receiving orders for it in carload lots.



To those who contract before December 1st for handling *Crow Elk-Hart* cars, we will promise the delivery of five *Crow Elk-Hart Jr.* cars before March 1st.

The *Crow Elk-Hart* is a car *you can sell.* The *Crow Elk-Hart* is a car that will bring you big profits as our dealer in your territory. We want to have a sample *Crow Elk-Hart* running in every county in the United States this fall, so that we can show the prospective buyers just what our 1915 car is and what it can do.

If you are looking for an opportunity of realizing big profits, we suggest that you write us immediately and we will give you our special introductory prices to dealers. *Drop us a line now.* The time to act is short.

Crow Motor Car Company

Elkhart, Indiana

MODEL E-45

NOW THREE STYLES of CYPHERS INCUBATORS

FOR THE SEASON OF 1915 we offer the poultry public of the United States and Canada *three patterns or styles* of high-class, *guaranteed hatching machines*, as illustrated and briefly described herewith. Please note closely the names, sizes and prices. These three styles of incubators, running through **Eight Different Sizes** and ranging in price from $10 to $38 are meant to meet the needs of all persons who are to be in the market this winter and next spring for *a satisfactory device of this kind.*

Made in Two Sizes.

130 Egg Superior Hot-Water Incubator. Price, Complete in Every Detail, $14.00.

SUPERIOR HOT-WATER INCUBATORS

These machines are exactly what the name says. They are heated by hot-water, instead of with hot-air and are "superior" *in every detail.* The water boiler and tank (tubular) are of heavy-weight copper. Lamp has seamless bowl; burner is best on market. Incubator case *is of wood,* attractively finished in golden brown, with brass trimmings (hinges, buttons, etc.), and has *double walls,* with air space insulation. Are equipped with Standard Cyphers zinc and steel toggle-joint thermostat and knife-edge regulator. Have *forced water circulation* and are automatic in ventilation. Roomy chick nurseries. Are built in two sizes: 65 eggs, price complete, $10; 130 eggs (see illustration), price complete, $14.00. *Fully guaranteed.*

COLUMBIA HOT-AIR INCUBATORS

Are built to meet the wide-spread demand for large-capacity, lamp-heated machines that can be sold at *surprisingly low prices* and yet be guaranteed to do high-class work. Have wooden cases, attractively finished in dark green, with brass trimmings and double walls. Seamless-bottom lamp bowls, best quality brass burners, zinc and steel Standard Cyphers toggle-joint thermostat and *same regulating equipment as used on highest priced machines.* Fume-proof, forced draft heater, asbestos covered and metal banded. Automatic in ventilation and embodies diffusive principle. Roomy chick nursery under egg trays. Are made in two sizes: 140 eggs, price complete, $15.00; 250 eggs (see illustration), price complete, $19.00. *Fully guaranteed.*

Made in Two Sizes.

250 Egg Columbia Hot-Air Incubator. Price, Complete in Every Detail, $19.00.

Made in Four Sizes.

390-400 Egg Standard Cyphers Incubator. Price, Complete in All Details, $38.00.

STANDARD CYPHERS INCUBATORS

These are machines that *for fifteen years* and more have been recognized as the "standard hatchers of the world." Tens upon tens of thousands of them have been sold and are in *successful use in every civilized country on the globe.* They are the last word to date in incubator building, not a penny being spared anywhere in their construction to make sure of their doing satisfactory work *in all climes,* under *widely different conditions,* in the hands of all sorts of people. Are built in four popular sizes and at prices as follows: 70 eggs, price complete, $15.00; 140 eggs, price complete, $22.00; 244 eggs, price complete, $32.00; 390-400 eggs, price complete, $38.00. Satisfaction, *or your money back.*

All Prices in this advertisement are for territory east of the Rocky Mountains, north of Texas, and south of the Canadian line. In high freight territory slightly higher prices have to be charged, but as a rule the difference is small.

FREE CATALOGUE: WRITE TODAY for special circulars about our SUPERIOR HOT-WATER and COLUMBIA HOT-AIR INCUBATORS, which will be sent free on request to any address, and also have your name listed to receive a FIRST EDITION COPY of our 200-page Complete Catalogue for 1915, entitled **"The Profits in Poultry Keeping,"** that will be ready for mailing by January 1, 1915. Contains valuable down-to-the-minute information on how to make the most money with poultry in small or large flocks. Address our place of business nearest you and ask for the name of nearby sales agency.

HERE IT IS!

21 TIMES World's Champion

BELLE City hatching outfits entered by owners in Successful Farming's 1914 Contest in *competition with all other machines* took 13 more championships out of the total of 28 awards.

These added to the 8 world's championships which the Belle City already had, make the Belle City the 21 Times World's Champion.

A full account of the 21 Times World's Champion Belle City winnings is given in my new free book, "Hatching Facts." Send for book.

Get the Whole Wonderful Story—The winners themselves tell how all the 21 World's Championships were won by 100 per cent hatches in competition with all makes of incubators, some costing far more than the Belle City.

My Free Book, "Hatching Facts," also gives the stories of multitudes of men and women who are scoring 100 per cent perfect hatches with the Belle City in all parts of the country. 327,000 World's Champion Belle City outfits are now in use. Get the Book. Satisfy yourself. And remember—when you order a Belle City you get an exact duplicate of the machines which have won the World's Championship 21 Times.

This Automatic Poultry Feeder
Will Make Your Hens Lay Better

Here's *proof!* The Norwich Automatic Feeder is used exclusively at the North American Laying Competition where all official egg records have been broken. In the Third Competition, just completed, the entire flock of 500 birds averaged 170 eggs—131 of them laid 200 eggs or more—one pullet made a world's competition record of 286 eggs in 365 days. These are *official records* made by birds operating these feeders, *which were refilled but once each week.*

Did your flocks do as well? You *can* secure equally good results, at the same time *reducing labor and feed bills.* Adopt this method of feeding—give your birds a fair chance to do their best work. Our new

"Columbian Queen" The 286-egg Record Hen

Fed by our automatic feeders

is offered in response to the demand from owners of small flocks for a low-priced machine embodying the essential mechanical features which have proved so thoroughly satisfactory. It has a capacity of *12 quarts*—is positive in action—thoroughly well made—will give satisfactory service for years.

Among the special points of merit of the Apaco Poultry Feeder are the all-important *adjustable valve* for regulating the flow of feed and positive *rotary action feeder rod.* These are exclusive Norwich features which cannot be secured elsewhere.

Guaranteed Satisfactory or Money Refunded

Test this time-saving, results-bringing method *right now.* Mail your order for one or more Apaco Feeders today. We will make immediate delivery through your dealer or by parcel post and your flock will soon begin to pay you dividends. You simply can't lose under our guarantee.

Our attractive catalog is full of interesting pictures and helpful information. Mailed free for the asking.

AMERICAN POULTRY JOURNAL
CHICAGO, ILLINOIS

Is the paper that leads—it is the one great poultry paper of America; it is the oldest, largest and best. Established in 1874. Contains as high as 252 pages per issue. It is the only journal that has a colored supplement and colored cover. Its editorial staff embraces the most noted poultry authorities in the country. It tells you how to breed and raise better birds, how to prevent disease in your flock, and how to cure the ailments of your birds. It is the first aid to all owners of poultry—tells you how to construct poultry houses, how to run your incubator and brooder so as to get the best results. In fact, each issue is an encyclopaedia of poultry.

Subscription Price, $1.00 Per Year

AMERICAN POULTRY ADVOCATE
SYRACUSE, NEW YORK

Published once a month, one of the widest quoted publications in the field, is always readable and instructive. It employs some of the best poultry writers in the country to contribute articles each month, and is conceded to be one of the best papers of its kind in the East. Readers await its coming as they know what is in store for them. It is read from cover to cover.

Subscription Price, 50c Per Year

FARM AND HOME
SPRINGFIELD, MASS.

The paper that lives up to its name. Published twice a month; deals with everything of interest to the housekeeper, farmer, gardener, fruit grower, dairyman and farmer. It is chuck full of knowledge and advice of home and farm experts. All in all, it is conceded to be one of the best papers of its kind in the country.

Subscription Price, 50c Per Year

American Standard of Perfection

1915 Revised Edition

1915 Revised Edition

The only American authority on the required characteristics of all breeds and varieties of Chickens, Ducks, Geese and Turkeys. THIS GREAT BOOK has just been revised and gives the correct Standard Shape, Color and Weight of every recognized variety of poultry, as well as the disqualifications of each variety.

THE BOOK YOU NEED

You cannot raise, mate, exhibit or sell fowls intelligently without it. The book contains all the NEW BREEDS admitted to the Standard. It also contains ideal illustrations of the different varieties of fowls photographed from living models and gives the correct color of plumage on your birds. It's a guide to success in the poultry business. No one can breed birds of any variety for exhibition without a copy of the **American Standard of Perfection** as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, **$2.00;** leather, **$2.50.**

Our Special Money Saving Offer

The Am. Standard of Perfection (cloth) and American Poultry Journal for One Year **$2.50**

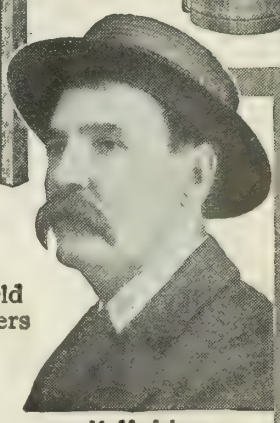
Let Us Tell You What We Have Found Out About Chickens—

H. H. Johnson

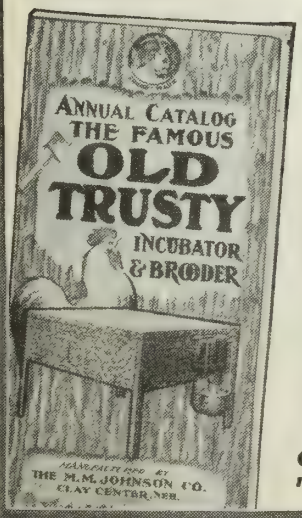
Mrs. M. M. Johnson



Big Output Makes Low Price

Write for Catalog

WE have raised chickens ourselves—we have lived comfortably and saved money on a poultry income—and we have started 580,000 other people raising chickens for profits. Now, we want to start you. We want to lay before you the same plans that pointed the profit-making way to our 580,000 customers. Will you let us do it?



What we have found out about chickens, we have written into the Old Trusty book which we want to send you free. If you will read a few chapters in it, we believe that you too will go in for poultry profits on a scale that you never tried before. The point is this, we have always looked upon chickens as money-makers. Our success has been our best argument in getting others to enlarge their poultry operations for profits with the

M. M. Johnson
Inventor of Old Trusty

Old Trusty Incubator

Big Profit Maker for Poultry Raisers Everywhere

It has the same good reliable construction that M. M. Johnson, its inventor, put into the first Johnson made incubators, when he and Mrs. Johnson made that famous trip in a spring wagon through Nebraska, Iowa, Missouri and Kansas many years ago to introduce artificial hatching. He hauled his incubator over all kinds of roads, left it out in all kinds of weather, yet it turned out big hatches every time.

Big Production—Low Price

Last year we were called upon to manufacture about 80,000 Old Trustys. This year we look forward to sending out at least 100,000. We have our big factory ready for that output. Also we have our prices fixed to make quick sales.

Because of this enormous output, we are enabled to give the Old Trusty for from $3 to $5 less than any other factory would have to ask. We can buy raw material at lower prices, we can install machines that cut down manufacturing cost, and we can keep our men busy specializing on the various parts and turning out more pieces per day. But, we are not going to ask you here to buy an Old Trusty. What we want you to do is to

Mail a Postal Today for the Old Trusty Book

and read a few chapters on raising chickens for profits—then see if you cannot apply our suggestions in a way that means more money from chickens than you ever made before. Just a postal will do if you will please mail it today to

M. M. JOHNSON CO., Clay Center, Neb.

Old Trusty is still less than $10, freight paid to any point East of the Rockies—a trifle more to points farther West. 30 to 90 days' trial—10 year guarantee. Catalog free.

LILY WHITE STRAIN BRED-TO-LAY
S. C. WHITE LEGHORNS

HATCHING EGGS FOR SEASON 1915

BABY CHICKS ORDER THEM NOW

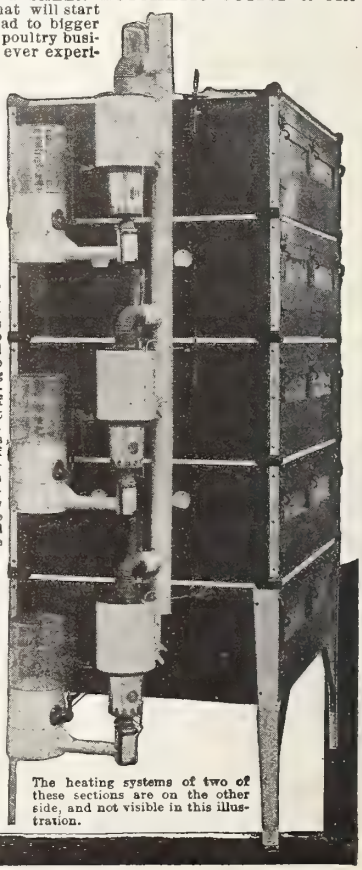
We are ready to deliver any quantities of hatching eggs and baby chicks after March 1st up to 10,000 a week from our famous trap-nested S. C. W. Leghorns with 15 years of careful selection, trap-nesting and pedigreeing for eggs. Remember we trap-nest more birds than any other farm in the U. S. on our new plant, the largest in the middle west. In all our breeding pens this season we use male birds with a 200 egg pedigree to stamp that improving way of eggs on their offsprings. Remember, egg production is the most important line in successful poultry culture. If you want to increase your egg production, write for our new 1915 catalogue; will be ready Dec. 15th.

LILY WHITE POULTRY FARM, GENESEE ROAD, SAGINAW, MICH.

The 3 Big Money-Making Incubator Sensations of 1915

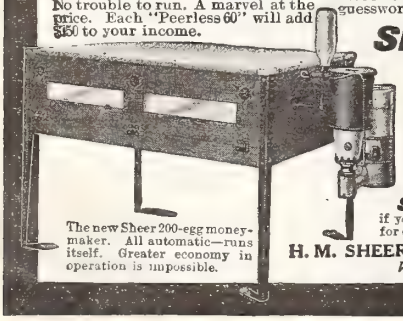
HERE are the most remarkable improvements made in the incubator business in the last quarter of a century. They are now making possible bigger profits than have been ever known in the history of poultry raising. There are no ifs or ands to this statement. The small unit system in poultry raising is sweeping the country. When you increase the **size** of your unit, your **percentage of hatch decreases,** because uniform regulation of heat, heat distribution, moisture and ventilation become increasingly difficult. For this reason poultry raisers are **decreasing** the **size** and **increasing** the **number of their units.** They are using the Sheer Blue Ribbon Line of **automatic incubators,** which have made the small unit system the wonderful success it is today. Every Sheer Incubator is a marvel of automatic mechanism. They reproduce natural incubation with a wonderful **uniformity** and **regularity,** which no human hand or brain can give. **It's nature.** Result, greatest percentage of hatch. Heat and flame control, heat distribution, heat regulation, ventilation and moisture, **all automatic.** One adjustment does the work. Result, greatest **economy** in labor, fuel and operation. They are the biggest profit hatchers in the poultry business on earth today. Whether you are raising poultry merely with 60 eggs at a time or are doing it on a large scale, there's a SHEER AUTOMATIC OUTFIT to suit your needs that will start you on the road to bigger profits in the poultry business than you ever experienced before.

Sheer Automatic Incubators Are The Surest Hatchers



The new "Peerless 60" is **one** of the new Sheer sensations. The biggest little incubator on earth, the first **practical, all-metal** fireproof incubator ever made with an absolutely perfect heating, heat distributing and ventilating system—**all automatic.** Natural as a nest, giving absolutely uniform heat, fresh air and moisture to every egg. Only one adjustment at the start necessary. Nothing to get out of order. Wonderful Sheer **Double-Wafer Thermostat** gives automatic heat control, whatever outside temperature may be. Never overheats the eggs. No fussing with lamps or regulators. Supplies necessary moisture automatically. Produces only as much heat as is required, because of **automatic** flame control—no waste of fuel or heat. Keeps cost to a minimum. Rivals the old hen herself. Fully equipped with wonderful Sheer automatic fixtures. A perfect unit—the small machines make the success. Enlarge your plant as you please by adding more units. **More profitable** than any of the large machines with a single heating plant. Holds 60 eggs. No trouble to run. A marvel at the price. Each "Peerless 60" will add $150 to your income.

"Peerless Automatic"—200-Egg Capacity



And here's sensation No. 2, the new 200-egg Sheer **automatic** wonder. This 200-egg unit is just big enough for the poultry-raiser who wants to start small and grow big gradually, and still run his plant with the greatest economy and least work and expense. Big units are out of date. Small units that are not automatic keep you fussing night and day, and the size of the hatch depends on your good luck. Here's an incubator that **is automatic,** reproducing natural incubation with the most sensitive, accurate automatic mechanism in the world. Equipped with the great Sheer Automatic Heating System that **adjusts itself,** with ventilating and moisture system that is self-regulating, with the wonderful Sheer Automatic Flame-Control, Automatic Lamp, the Sheer Double-Compound Thermostat Regulator—all exclusive Sheer features that make Sheer Incubators the **surest** hatchers in the world. **No more hand regulation.** No more guesswork. Don't make the mistake of buying any incubator, large or small, that isn't run **automatically**—the Sheer way, the only way.

"Peerless Automatic Multidek," 1000-Egg

Here's Sheer sensation No. 3, the new 1000-egg Multidek, different from any big machine you have ever seen. Not one big unit, but **five** 200-egg units in **one,** each unit a complete self-operating incubator, yet all 5 units operating in **perfect unison.** The door of the top section is on a level with your eyes. Saves 6 times the floor-space occupied by other big machines. No waste of labor, everything is before you, within reach of your arm. The biggest improvement in incubator design in the last generation. A **world beater for profits.** Have as many sections as you want, one on top of the other, from 1 to 5. Each section completely and independently equipped with the latest wonderful Sheer Automatic fixtures. Only one adjustment necessary during the whole hatch. The only machine for the big poultry raiser. Starts small raisers to a big success—start with one unit and add more as your business grows.

The heating systems of two of these sections are on the other side, and not visible in this illustration.

The new Sheer 200-egg money-maker. All automatic—runs itself. Greater economy in operation is impossible.

Sheer Fixtures Make Any Incubator Automatic

25 years in the incubator business have made Sheer Automatic Fixtures the world's standard. No matter what kind of incubator you now have, old or new, you can make it automatic with Sheer Fixtures. Even if you cannot afford a new machine right now, you can now make your old incubator **new** and **automatic.** Sheer Fixtures, Automatic Lamps, Regulators, Thermostats, complete heating, ventilating and moisture systems, incubator parts, can be fitted to **any** incubator.

Send for Complete Facts, FREE. You need Sheer if you are in the poultry business, or are thinking of going into it. Send for complete illustrated information that will open your eyes to big profits.

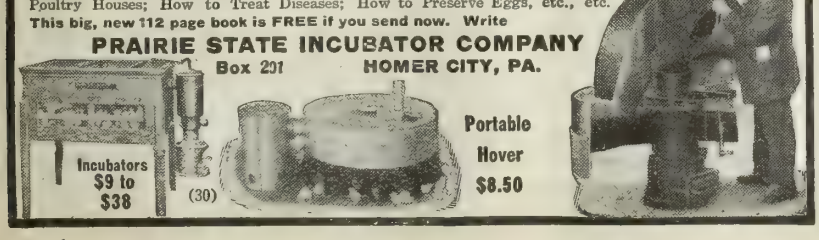
NOW READY

NEW 1915 PRAIRIE STATE CATALOG

One of the world's foremost experts on artificial incubation and the rearing of poultry, wrote this big 112 page book. His advice is worth hundreds of dollars, especially to the beginner. For example—he tells you how, by studying the ways of hens that stole their nests, he hit upon the idea of the moistened Sand Tray and how it resulted in a wonderful increase in the number of strong, vigorous "CHICKS THAT LIVE"—the profit-producing kind—the only ones you can afford to raise.



Send Your Name on a Postal for FREE BOOK!

"Praire State" Incubators and Brooders are used and endorsed by leading Agricultural Colleges and Poultry Experts, the world over and approved by the National Board of Underwriters. For over 30 years they have maintained the lead, and with many new 1915 features they are simply incomparable. You cannot get these exclusive features in any other incubator.

It tells all about Prairie State Incubators and Brooders; How to handle Large Flocks with the Prairie State Stove Brooder. In addition to full descriptions of Prairie State machines and their exclusive features, there are about 60 pages of other valuable information on poultry raising. For example: How to Feed, Rear and Breed for Best Results; How to Grow Green Feed in Winter; How to Build Poultry Houses; How to Treat Diseases; How to Preserve Eggs, etc., etc.

This big, new 112 page book is FREE if you send now. Write

Something to Crow About!

SIX MEDALS WON
in the N. A. Contest Just Ended!

Ours is the strain that wins—official records in one after another of the big, international egg-laying contests prove it beyond question.

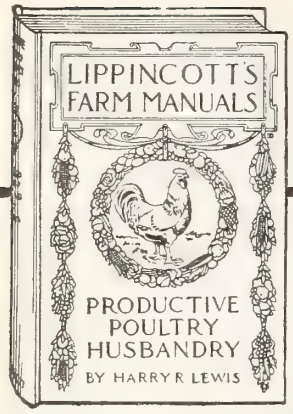
This is the Strain YOU Need—
It's the EGGS That Pay the Profits!

These were our official winnings in the North American Egg-Laying Contest just ended:

S. C. White Leghorns—Highest award and 6 silver medals, 5 hens making the wonderful record of 1139 eggs, laying 251, 250, 224, 222, 192 eggs respectively. Highest official record for any pen reared on American soil.

S. C. R. I. Reds—1st prize in this class, five hens laying 1043 eggs—highest official record known for Reds.

White Wyandottes—Led all English & American entries in this class. Write today for full details.



THE PENNA. POULTRY FARM
Dept. 2022 Lancaster, Pa.

Baier's Partridge Ply. Rocks

The fowl with the color of a quail. Our stock is high scoring, true in color, heavy long body, not leggy. Greatest layers on earth. Some of these hens have a record of laying from 200 to 220 eggs per hen each year. Eggs in season at $2.00 per setting or $10.00 per 100. In order to make room, we will sell a few choice cockerels at $2.00 each if taken at once.

BAIER BROS. MFG. CO., CISSNA PARK, ILL.

PRODUCTIVE POULTRY HUSBANDRY

(Revised Second Edition)

By Harry R. Lewis, B. S.

This book contains 536 pages, 329 illustrations, is fully indexed and put up in handsome cloth binding. It is one of the most comprehensive and valuable books on poultry ever offered to the poultry world. The text is so arranged that it will meet the needs for systematic reading courses, for farmer's clubs, poultry associations and granges. To the farm poultryman the text clearly pictures methods which would enable the average farmer to keep from two hundred to five hundred birds, as "side line" to general farm operations, and realize a handsome revenue.

The contents of this great book is as follows: Introduction—The Teaching of Poultry Husbandry; Choosing a Poultry Farm; Making a Successful Start; The Breeds of Poultry; Selection of Stock; Principles of Poultry House Construction; Practice of Poultry House Construction; Equipping the Poultry House; Yards and Yarding; Principles of Poultry Feeding; Feeding Stuffs; Practice of Poultry Feeding; Principles of Poultry Breeding; Practice of Poultry Breeding; Management of the Laying Stock; Management of the Breeding Stock; Anatomy and Physiology of the Fowl; Formation of the Egg and Chicken; Natural Incubating and Brooding; Artifical Incubation; Artificial Brooding; Care of the Growing Stock; Broilers, Roasters and Capons; Fattening, Killing and Dressing; Marketing the Products; Records, Accounts and Advertising; Exhibiting and Judging; Diseases, Parasites and Enemies

In order to get a copy of this great book into the hands of each and every one of our readers, we have made arrangements with the publishers whereby we can furnish you with a copy of **Productive Poultry Husbandry** and a year's subscription to American Poultry Journal at $2.50; or a copy of the book and three years' subscription to American Poultry Journal at $3.50. The price of the book without subscription is $2.00. At these prices we prepay all carrier charges. Order your copy, today address

American Poultry Journal

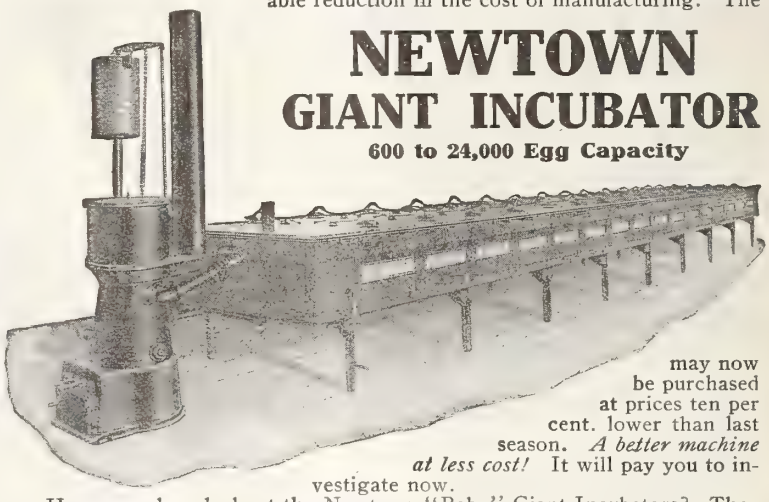
A BETTER INCUBATOR AT A LOWER PRICE



Quality is the first consideration in all Newtown products, but every effort is exerted to bring manufacturing costs to the lowest level. The savings thus effected are reflected in our retail prices: *the buyer is given the benefit.*

The Newtown Giant Incubator has every improvement which increases efficiency, eliminates risk, saves time and money. It positively hatches the largest percentage of the strongest chicks, at lowest cost and with the least attention.

The machine itself is *right* in every particular and we have now, through simplifying certain parts and improving factory equipment, made a considerable reduction in the cost of manufacturing. The

NEWTOWN GIANT INCUBATOR

600 to 24,000 Egg Capacity

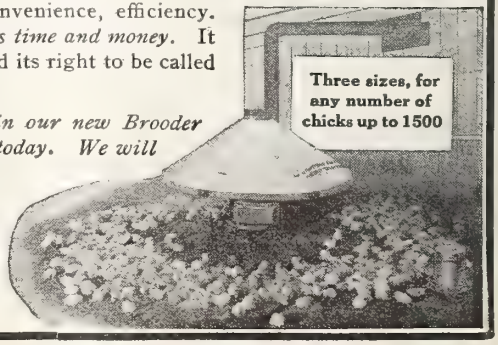
may now be purchased at prices ten per cent. lower than last season. *A better machine at less cost!* It will pay you to investigate now.

Have you heard about the Newtown "Baby" Giant Incubators? They are made in 60, 150 and 300 egg sizes and embody the unique features of the large machine.

If you are interested in hatching **good** *chicks you should have our Catalog, which we mail free on request. Better ask for your copy now!*

NEWTOWN GIANT INCUBATOR CORPORATION
21 Warsaw Street, Harrisonburg, Virginia

"THE BROODER THAT MADE GOOD" IS NOT A MERE EXPERIMENT



The Newtown Giant Colony Brooder is the machine you will use if you wish to be **sure** of best results. Experiments with untried brooding systems are expensive.

You *do not "take a chance"* with this marvelous machine which has triumphantly passed through two seasons of rigid, practical tests by poultrymen in all parts of the world. Let the other fellow conduct costly experiments if he can afford them. It will pay you to use "the brooder that made good" and so be assured of success. The

NEWTOWN GIANT COLONY BROODER

Coal-Burning, Self-Feeding, Self-Regulating

combines in one machine every factor which the business poultryman demands—safety, economy, convenience, efficiency. It *raises the chicks* and *saves time and money.* It has conclusively demonstrated its right to be called *"the one perfect brooder."*

You will be interested in our new Brooder booklet. Send your address today. We will mail a copy without charge.

Buschmann - Pierce Red Farms
RHODE ISLAND REDS Rose and Single Comb

Our Reds have won more prizes in the last four years, in the largest shows of the country, than any other exhibitor. This fall at the great Indiana State Fair and Michigan State Fair (both the same week) Iowa State Fair and Illinois State Fair, our birds won

19 firsts, 15 seconds, 13 thirds

in competition with over (900) Rhode Island Reds. This proves decisively that we have more good Reds than any other breeder. We can furnish you stock for any show, large or small, at the right price. If you want to win, write us, or if you want good breeding or utility stock, we will be glad to give you information about our fowls. Our beautiful book tells you how to mate and care for them; sent for 10 cents. Our new farm at Hope, Ind., is a model in itself. We are the largest breeders of Rhode Island Reds in the world.

Buschmann-Pierce Red Farms, Hope, Indiana **W. C. Pierce, 828 State Life Bldg., Indianapolis, Ind.**

White Wyandottes

That have proven their ability to win in all competition, having won the lion's share of prizes this season at the Great Cleveland Fair after going through a wreck and at the Michigan, Iowa, Indiana, and Illinois State Fairs, five of the largest shows and dates lapping we having had three strings out at once.

This demonstrates that we can supply you with winners. Cocks, two hundred yearlings, to select from; hens seven hundred, our last years breeder's and thirty five hundred youngsters.

Let us know your wants, we can supply you with birds to win anywhere at prices very reasonable. A large flock of utility birds for eggs.

Send for catalogue.

AMERICAN BROODER STOVE CO. INDIANAPOLIS, INDIANA OAKLAND, CALIFORNIA

Your chicks that die in the shell—or from White Diarrhoea—are a money loss to you

You can stop chicks from dying in the shell—you can prevent White Diarrhoea. When you take off your next hatch you can produce a strong, healthy chick, with sound lungs and healthy blood, **from every fertile egg.** You can turn that dead loss into bankable profits.

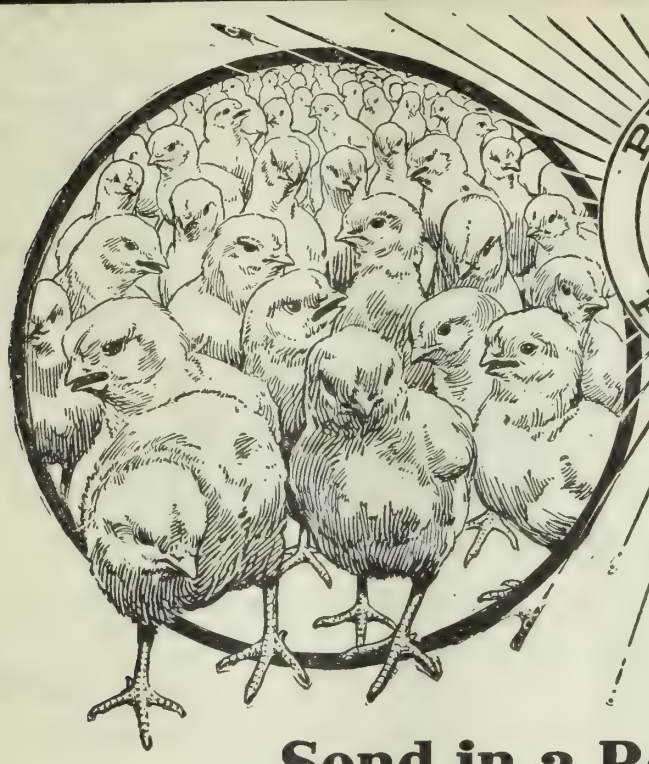
Deadly Poison—Carbon Dioxide Gas is what kills the chicks in the shells or makes them die later on from White Diarrhoea. When your chicks burst their shells, they throw off this poisonous gas when breathing and in the close atmosphere of the egg chamber there is not enough life-giving Oxygen for **all** the chicks—there is not enough to overcome the effects of the gas—and the weakest and last in the shell chicks die from poison, while some of the hatched chicks are so weakened by the poisonous gas that they cannot overcome the deadly White Diarrhoea germ.

LIFE TO DEAD IN THE SHELL CHICKS

Stop This Poisoning!

Increase Your Profits by supplying the new born chicks with life giving moist oxygen.

Use the **Ajax Improved Oxygen Vitalizer** during the last three days of the hatch, and you'll get a big, strong chick, from **every** hatchable egg.



Attached to the incubator in a few minutes—needs no attention—works automatically.

The **Ajax** will pay for itself over and over again—makes money for you—turns losses into profits. That's what you want, isn't it?

Send for "The Book of Positive Proof." Just say "Tell me about the **Ajax**—prove to me that it will do all you claim." A postal will do, or if you wish, send $4.00 and we'll send the **Ajax** prepaid to your door with instructions for use and a guarantee of

Money Back if it Fails

PITTSFIELD POULTRY

Send in a Reserve Order Now While Prices are Low

No Money Down—Just the Order

In keeping with the recent rapid rise in prices of live stock generally, the indications now are that poultry prices will also be higher during the coming year. For the present we have decided to keep the price of Pittsfield pure-bred stock same as last season *on all orders received now.* We cannot guarantee, however, that our prices will not advance, so get your reserve order in right away. Only the great Pittsfield plants (with a capacity of one million chicks a year) and scientific management make Pittsfield prices possible. Get your order in.

PITTSFIELD

Barred Rock White Rock S. C. W. Leghorn R. I. Red

DAY-OLD CHICKS

Pittsfield stock now comprises four different breeds of poultry. For health, vigor, egg production, color and formation, no utility stock in America can compare with Pittsfield.

Safe delivery guaranteed. Your money back if not satisfied. Consider these prices for pedigreed stock: 100 chicks, $18.00; 50 chicks, $10.00; 25 chicks, $5.00. Write and tell us which kind you'll need, how many and about when you would like to receive shipments. You needn't send any money. Just reserve your order now and we'll protect you on prices.

Want any Breeders At Low Prices? Culled stock—birds of stamina—the kind that will ensure good hatchings. One or two of our cockerels will stamp Pittsfield qualities through your flock. You can save money by buying now. Write and tell us your needs in breeders.

Eight-Weeks-Old Chicks Buy a few of these birds and save brooder troubles. These chicks are well feathered, big framed and well on their way to a vigorous maturity. We can arrange selection of cockerels and pullets according to your wishes. Four different breeds. Our prices are very reasonable. Write for free booklet, "Money Making Poultry."

Opinions of Experts

Dear Sir: * * In my opinion the article on anatomy of the fowl will pay anybody for the purchase of the book. Yours truly, A. F. Rolf, Professor in charge of Poultry, Oklahoma Agricultural Experiment Station, Stillwater, Okla.

Gentlemen: Your 1914 Year Book has just been received. This, I find, is a valuable book, much more so, in my opinion, than the one which you issued last year. I find it crammed full of valuable information from cover to cover. Yours very truly, T. E. Quisenberry, Director Missouri State Poultry Exp. Station, Mountain Grove, Mo.

Dear Sir: Year Book for 1914 just to hand and contents carefully noted. It is filled to repletion with valuable information no owner of poultry can afford to be without. Sincerely yours, B. F. Kaupp, M. D., Spartanburg, S. C.

These are only a few of the hundreds of letters we have received.

Printing and Binding

The Year Book is printed on high grade enameled book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book, as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as example of what the best printer could produce in the year of 1914.

No book of this kind has ever been presented to the American public before. Think of it! 408 pages, 8 colored illustrations, the best articles that money can buy, on the most helpful subject, and complete show reports for 1913-14.

Prices—$1.00 for the de luxe cloth bound edition and 50 cents for the paper bound edition, carrier charges prepaid.

You can get the book FREE.

The American Poultry Year Book for 1914 is undoubtedly the greatest poultry book ever published in this country and we are giving you an opportunity to get this book ABSOLUTELY FREE of all cost.

Read this page carefully and remember the offer is a bonafide one guaranteed by a responsible publishing house that has been continuously in business for 45 years. You can't lose—so send for your book today.

How to Get the Book Free

With every subscription to American Poultry Journal received, together with the attached coupon, before Jan. 15, 1915, for one year at $1.00, we will send without cost, one copy of the American Poultry Year Book, paper bound.

For each 3-year subscription to American Poultry Journal at $2.00, sent in before January 15, 1915, we will send one copy of the cloth bound de luxe edition of the Year Book without cost. These offers are limited and will only be accepted untill date mentioned above.

Send us your order today and the book will be shipped to you at once, carrier charges prepaid. If you are not satisfied with it after examining it, return it to us and your money will be sent back to you the day we receive the book. What more can you expect?

You cannot afford to let this great opportunity pass which enables you to secure a copy of the greatest poultry book ever published ABSOLUTELY FREE by subscribing to the world's greatest poultry paper. This offer is void after January 15, 1915, Get busy today and send all orders to

American Poultry Journal Publishing Co.
542 South Dearborn Street Chicago, Illinois

The Year Book Contains

408 pages, eight colored illustrations of pure bred poultry, suitable for framing, also contains such articles as The Remarkable Growth of the Poultry Industry, A New Method of Judging Chickens by Comparison, Barred Plymouth Rocks, Frozen Poultry vs. Fresh Killed, Blue Orpingtons, The Poultryman's Calendar, The Poultryman's Encyclopedia, Organization of Boys' and Girls' Clubs, Laying House for 100 Hens, White Diarrhoea and Fowl Cholera, Cancer in Fowls and Its Prevention, Efficiency in Poultry Husbandry, Poultry Feeding and Foods, and many more too numerous to mention, as well as reports of all the leading egg laying contests; also complete reports of seventeen leading poultry shows in the United States, giving complete report of each show and first, second and third prize winners in every class. Illustrated by L. A. Stahmer, the famous poultry artist.

ALDRICH WHITE ORPINGTONS

The Strain of Quality

"If you want to have a good time" breeding poultry, I'm the White Orpington Brigade.

"If you want to have the best time," buy your stock from Headquarters,

IN 1913 the Aldrich Poultry Farm sold birds to customers who took prizes at nearly 100 leading shows in the United States and Canada. We also mated up 30 pens, which we believe were of a better average quality than had ever been used for breeding by any large breeder of S. C. White Orpingtons in the country. We believe this because some member of the firm has visited nearly every prominent Orpington farm in the country, and we met every prominent breeder at the largest exhibitions in the United States, and from the letters from our customers, who notify us of their winnings this year with the young stock raised from the eggs from these matings.

From those pens we sold about 14,000 eggs, sending them to every state in the Union, and every province in Canada and Newfoundland, and Hawaii. From these pens we hatched and reared about 1000 young birds this year, which are a decided advance upon the stock in last season's pens. When it is remembered that our winnings last year with young males at the large exhibitions were UNPRECEDENTED IN THIS VARIETY, our readers may see the chance to secure STOCK WHICH WILL WIN in any show in the country. This year we show at Chicago only, as the Madison Square Garden Show is so late that it would be too much damage to take our finest stock from their breeding pens at the middle of the breeding season.

Our customers will thus have the chance of SECURING PRIZE WINNERS for all the winter shows, at PRICES FAR BELOW those for which stock of this quality has ever been sold heretofore.

For our egg trade we are mating up the same number of pens which will be headed by the prize winners of the last season, and their sons, equal in quality to their sires, and the females will be of the choicest quality; NO BETTER EGGS CAN BE FOUND IN THE WORLD from which to raise pure standard bred stock.

While we have such a line of prize winners, we have also a line of STANDARD BRED UTILITY STOCK of GOOD LAYING STRAIN, plenty good enough to win at the shows of moderate strength, and to furnish winners for the shows next year.

Catalogue sent free to those who mention the American Poultry Journal. For exhibition stock write to the following address:

Aldrich Poultry Farm, 5082 High St., Columbus, Ohio

AMERICAN POULTRY JOURNAL

The Improvement of Farm Poultry

It Will Pay the Farmer to Keep Only First Class Standard-Bred Fowls

By James B. Morman, Kensington, Md.

THE farmers in the United States are not getting rich quickly from poultry keeping. The Census of 1910 gives the average value of eggs produced on each farm which reported in 1909 as a little less than $58, and the value of poultry raised as $42. Thus the average total value of poultry products per farm in 1909 was about $100. When the expense of feeding, labor and marketing are considered, together with the interest on the capital invested, the profits made by the average farmer from poultry must be exceedingly small.

The kind of poultry kept probably has something to do with this poor showing. The number of fowls on farms reporting was 273,255,924, and the number of eggs produced 1,457,385,772 dozen, or an average annual production of 64 eggs per fowl.

With the natural advantages the farm has over any other place for keeping poultry, this is a very poor showing in egg production. The fowls of the farm usually have free range, and this advantage ought to be worth dollars and cents to the farmer. But from a financial point of view, the showing is not much better than the egg yield. The total value of poultry products raised in 1909 and sold on an economic basis has been estimated at about a billion dollars. The Census reports the value of all fowls on farms in 1909 at $154,663,000, and of eggs produced at $281,157,980—or a total of $435,820,980. It is to be considered, however, that only 87.8 per cent of all farms reported poultry returns and only 76 per cent reported egg production. When due allowance is made for these deficiencies, it shows that only about one-half of the poultry and products raised comes from the farms in this country.

From these facts let us learn two lessons. First, that the American farmer has a golden opportunity at hand in poultry keeping; and, secondly, that standard breeds of poultry are as important and valuable to the farmer as other first-class stock.

Now, I propose to show that it will pay the farmer well to keep first-class fowls, as judged by the record of my flock of 50 White Plymouth Rocks during the past year. The day of the scrub in live stock on the farm is rapidly passing, for the importance of pure-bred stock is quite generally recognized by the progressive farmer everywhere. There is no reason why this progress should not include poultry. It has been shown by the Illinois Experiment Station that many farmers are keeping cows with little or no profit, if not at a downright loss. Such a farmer, if he is wise, would probably find it to his advantage to get rid of all such cows and invest his money in good poultry. His prospects for turning a loss into a profit would be much better with some Standard breed of poultry. But the question is will he do it?

Increasing the Egg Yield.

Notwithstanding the Census figures quoted above, it is difficult to believe that the great utility industry of egg and poultry production on our farms, which amounts to upward of half a billion dollars a year, is carried on without a profit. If this is the case, it had better be abandoned. No farmer is justified in working for nothing in this day of economic progress. He has done that long enough in the past, and it is time to have a change. Let us suppose, therefore, that the farmer whose flock produces an average of 64 eggs per fowl a year makes a little profit off his fowls. Then, if he can double his annual egg output, the difference is all clear gain and his profits will be increased to that extent. If he keeps 50 or more fowls, the gross increased profit on this basis would amount to a nice sum at the end of the year. That this increase in egg production per fowl is easily possible, I give the following figures of eggs laid by my flock in 1913.

January	617 eggs	July	575 eggs
February	672 eggs	August	459 eggs
March	892 eggs	September	349 eggs
April	728 eggs	October	210 eggs
May	650 eggs	November	143 eggs
June	612 eggs	December	290 eggs

These figures of monthly egg production give a total of 6,197 eggs. At the beginning of the year the number of fowls was 53, of which 4 were 2-year hens, 22 1-year hens, and 27 pullets. On the basis of 53 fowls throughout the year, this gave an average of 117 eggs per fowl.

Since I use only fowls for incubating purposes, a part of the time of many fowls was taken up in hatching and rearing chicks. Moreover, several fowls were sold for hatching purposes early in the year, some were killed later for table use, and by the first of November the whole flock had been sold or otherwise disposed of with the exception of six. When all these conditions are taken into consideration, it is evident that the average egg production per fowl is much above 117 eggs, or more than double the average egg production of farm flocks in the United States.

The simple though necessary conditions of high egg yields are a Standard breed of fowls scientifically bred for egg production if possible, regularity in feeding, good houses, scratching accommodations for winter use, cleanliness, and a good yard or grass range. Of these conditions, probably the subject of feeding for successful egg production is one of the most important for poultry keepers. I practice the following simple method:

On winter mornings I feed a mash consisting of 8 parts by measure of bran, 2 of middlings, and one each of ground

oats, meat meal, and cut alfalfa or clover, the whole being wet down to a crumbling mass with the wastes from the table. In summer, the meat meal is omitted or reduced to not more than twice a week, depending upon the extent of the range that I allow the fowls to have. At noon, the fowls are given a half ration of wheat and oats mixed in equal parts; in winter this is thrown into the litter in the scratching pens, but in summer it is usually fed out-doors where the fowls can scratch for it to some extent. At night, the fowls are given all they will eat of a mixture of two parts corn and one part each of wheat and oats in winter, the amount of corn being reduced one-half as summer approaches. The reason for this is that fowls do not need as much of a heat-producing food as corn in summer as they do in winter.

As accessories, especially for winter egg production, the fowls are supplied with some kind of green feed occasionally, but are always provided with plenty of oyster shell and grit, fresh water, and a clean, dry dust bath.

Money in Surplus Cockerels.

Cockerels are generally regarded as a nuisance. For this reason they are frequently sold before their most profitable

First hen Chicago Coliseum show, 1913. Bred and owned by Robert D. Parmenter, Knoxville, Ill. Made from retouched photo.

age. Young chicks grow less rapidly during the first three months than they do during the second three months of their life. But, instead of being a nuisance, cockerels can be turned into good money without much effort by giving attention to a few details as to feeding and management.

For the best results, cockerels should be put in pens by themselves when they are from three to four months old. If penned early enough, they remain quite contented, require less attention, put on flesh rapidly and make an excellent table fowl with flesh almost as tender as a capon.

In feeding cockerels for meat, it is to be borne in mind that feeds containing a high percentage of protein, like meat meal, wheat, oats, etc., are the flesh formers. Corn, on the other hand, is rich in carbohydrates and fats, and is a heat and energy producing feed. In summer and early fall, cockerels can get along well with very little corn. The method of feeding described above for hens has also given good results with cockerels, especially if they are given a good supply of feed three or four times a day. When growing and in good health, cockerels will eat ravenously and put on flesh rapidly.

During the season of 1913 I undertook to determine what would be the income from 50 surplus cockerels handled in this way after they had reached the age of three months. During the time they were fed and managed as described not one showed any signs of sickness and there were no losses. No cockerel was sold or killed until the weight reached was four pounds or over. The average weight was about six pounds. The price charged was 20 cents per pound live weight, and 25 cents dressed. The cost of feed was $32.40, or about 10 cents a bird per month. The value of the cockerels sold and used for food was $63.98. This gave a surplus of $31.58, or a profit of about 60 cents per cockerel.

Profits From the Flock.

Would it pay the farmer to handle a small utility flock of fowls in the manner described? That is a question each must answer for himself, but it is worth considering. How many farmers keep records of income and expenditures from their dairy cows in order to know what profits they are making each year? Many a cow does not pay for her feed, yet some farmers keep them right along because they do not keep the records of individual cows, do not keep accounts, and cannot dispose of a cow as easily as a fowl.

For the past ten years I have kept detailed accounts of my flock of 50 White Plymouth Rocks, and I find both pleasure and profit in it. An itemized statement of income and expenditures for the past two years shows the value of a Standard breed of fowls for profits:

	1912.	1913.
Eggs at retail	$184.59	$163.02
Profit on sittings	21.08	29.11
Poultry sold	29.25	68.21
Fowls for table use	20.45	23.02
Increase in flock	6.00	40.50
Manure	5.00	5.00
Total income	$266.37	$328.86
Expenditures	108.92	151.71
Profits	$157.45	$177.15

On the basis of 53 fowls at the beginning of the year 1913, with no charge being made for labor, the net income is shown to be $177.15, or an average profit of $3.34 per fowl. This surpasses any record of profit I have ever made, and I attribute it to the following reasons: (1) The importance of a Standard breed of utility fowls for eggs and meat; (2) the raising of more chickens so that the cockerels could be fattened and sold; and (3) selling off the older fowls entirely with a view of using pullets only during the season of 1914.

At the present time, when the prices of many farm products are being lowered to a bare margin over the cost of production, it is advisable to practice every sort of economy and to secure as high profits as possible to meet existing conditions. From a strictly economic point of view, fowls today offer the farmer as good an opportunity to make a substantial profit as any line he can take up. The demand for eggs and poultry as food is going to increase with the rise in the prices of all other kinds of meat. When it is considered that the outlay for feed on the farm is very little, that the fowls usually have an extended run and do not require so much care, except in the winter, when the farmer has the time to give to them, the prospects of good profits by keeping some Standard breed of fowl were never better for farmers than they are at the present time. It seems surprising, in view of what profits can be made from egg production, that the farmers in the United States have paid so little attention to the poultry side of their industry, as the Census figures seem to indicate.

After many years of experience, I would advise every farmer to adopt some Standard breed of fowl, to give more attention to this branch of his business, and to keep records of the flock's production in eggs. These records will furnish a clue as to any improvement in profits from year to year. I believe the average farmer would soon realize that good fowls are about as profitable as any kind of livestock produced on our farms. There will undoubtedly be an increasing demand for both eggs and poultry for many years to come, and if the farm does not yield its quota of these products, the profits for the commercial producer will be all the greater because of the increase in price of eggs and poultry. In either case, the future prospects of utility poultry keeping were never brighter than they are at the present time.

National Egg-Laying Contest Report

"Lady Showyou's" Record Probaby Will Be Surpassed By Several Eggs—All Previous Records Broken for Eleven Months

By T. E. Quisenberry

THE tremendous interest which has been manifested and the attention given by breeders everywhere during the past few years to selection and breeding for egg production is responsible, in our opinion, for the great showing being made by the 1,000 hens in the National Egg Laying Contest at the Missouri State Poultry Experiment Station. Previous records are already broken, and it seems that a beautiful White Leghorn hen from Nebraska is almost certain to beat the record made by the famous hen, Lady Showyou, 281 eggs. The pen record has already been beaten by 181 eggs, and we have one month yet before the contest closes. This record is made by the English White Leghorns. A Barred Rock from Iowa, a White Wyandotte from Pennsylvania, and a Black Orpington from Nebraska have already surpassed any record made by those varieties in any of our previous contests. Others also seem destined to break previous records made by their varieties before the contest closes. Notwithstanding handicaps, a hen from New Zealand is among the nine highest hens. The average number of eggs laid by each hen for the eleven months is 155, which includes good and bad.

The hens have all been housed in the Fool Proof Shutter Front Poultry Houses. Each house is 8x12 feet with a partition in the center and ten hens on each side.

The method of feeding is as follows:

Equal parts of corn and wheat in spring and fall. Two parts corn and one part wheat in winter months, and one part corn chop and two parts wheat in the hot summer weather. Ground oats were fed in a hopper to take the place of the dry mash usually used. The oats were prepared by running them through an ordinary feed mill, hull and all. With each hundred pounds of oats we mixed ten pounds of dry beef scraps, one pound of ground charcoal, and one pound of salt, free from lumps. When sour milk, buttermilk or separated milk is available, we use that and prefer it to beef scraps. If the ground oats are not available, we use equal parts of wheat bran, shorts or middlings, and cornmeal with the beef scraps, charcoal, oystershell, and salt, as stated. The ground feed is kept before the hens at all times. The grain is fed in a six-inch litter in the following quantities:

Each morning, one pint to ten hens, and at night, one and a half pints to ten hens. Provide some green food, and keep the yards sweet by cultivation. We have grit, oystershell and fresh water always before the hens. Each afternoon we give the hens a moistened mash, all they will eat in thirty minutes. Use the cornmeal, bran and middlings for this purpose, and moisten it with milk or water. This is an important part of the rations for laying hens. Don't neglect the moistened mash.

This is a very simple method of feeding laying hens and there is not much danger of overfeeding them if they have been properly bred. For breeding stock we would recommend a ration composed principally of corn, wheat and oats, and no mash or beef scraps. Provide plenty of green food and compel the breeders to take plenty of exercise. This will enable you to get eggs which are fertile and which will hatch strong vigorous chicks which will live. Remember that the breeding stock should not be fed so freely and compelled to take more exercise. Feed more whole grain to the breeders and avoid much mash and beef scraps.

The Barred Plymouth Rock hen mentioned above is a very well marked specimen. She is better than 50% of the hens found in fanciers' yards. This is another point in favor of trying to breed good colored and shaped birds and combining in them the qualities of egg production. We also have two Leghorn pullets hatched in February that were bred from prize winning birds at last fall's poultry shows. One of these February pullets has laid 85 eggs so far, and the other 82 eggs.

The ten highest pens for eleven months are as follows, each pen being composed of ten hens:

Pen.		Eggs.
0.	S. C. White Leghorns, England	2,251
79.	S. C. White Leghorns, Pennsylvania	2,050
65.	S. C. White Leghorns, Missouri	2,033
47.	S. C. Reds, Missouri	1,932

So many hens are in full moult that the pen records were not very high, but were good considering the season. The ten highest pens for October were as follows, the English White Wyandottes winning the silver cup for October:

Pen.		Eggs.
24.	White Wyandottes, England	183

Care and Management of A Farm Flock

Second Prize Article in A. P. J. 1914 Chick Growing Contest, With Illustrations Showing Fine Growth of Chicks

By A. H. Faulkner, Millington, N. J.

FOR the past fifteen years I have devoted much of my time to the study and work of raising poultry, and find it fascinating and profitable. Have selected for my breed the White Orpington, as I wish to have a large bird, a good winter layer, and one that is naturally tame, consequently easy to handle. Also when dressed for market, white feathered birds look better than those with the dark pin feathers that show up through the skin. For several years I have put colored leg bands on my birds, using a different color for each year, and can by this method tell the age of any bird at a glance.

Last November I selected from the flock ten pullets and ten hens. With the ten pullets I mated a cock and called it pen 1, while with the ten hens I mated a cockerel, making pen 2. They were kept in good condition, but not pushed for winter laying.

From these pens I commenced, March 1st, to use the eggs for hatching, placing them under hens, but always more than one hen at a time, as one hen would be wasting time brooding a small flock of chicks. Near the poultry house I have a building which I use for sitting hens. I use shallow boxes for nests and place a sod with the dirt side up in each nest. After the sod is rounded out in the center, I place hay and chaff over it. This plan avoids drying the eggs too much. When all is ready I put in a few nest eggs, and dust the hens with a good louse powder. The dusting is repeated on the fifth day and again on the tenth to kill off any lice that might have hatched since the last dusting.

Day-old White Orpington chicks with mother hen. Average weight, 2 ounces. See second prize article "Care and Management of a Farm Flock."

After the hens have been on the nests a couple of days and have settled down to business I give them their eggs, placing twelve eggs from pen one under one hen and twelve from pen two under the other.

In this room I kept whole corn, grit and water, and about the same time every morning took them off the nests to get something to eat and saw to it that they went back to the right nest again. The hens sat well and at the end of three weeks the hen on the eggs from pen 1 hatched ten nice fluffy white chicks. I have a chick toe-marker and marked these chicks on the outside of the right foot, so when they are grown I can tell the mating they are from. The hen on eggs from pen 2 hatched five chicks. I broke the rest of the eggs and found them sterile. The five chicks were toe-marked on the outside of the left foot. When the chicks were well dried off and strong enough to remove from the nest, I took them out and rubbed camphorated oil on their heads. I repeated this within ten days and a number of times throughout their growing period.

When the eggs from pen 2 did not hatch well, I tested other eggs that I had under hens from this pen and found very few fertile ones, so I at once removed the cockerel from this pen and placed another one with these hens and after two weeks I had eggs from this pen from which I got excellent hatches.

White Orpington Chicks, two weeks old, average weight 8 ounces. See second prize article "Care and Management of a Farm Flock."

At about this time I sent to one of the leading White Orpington breeders for a sitting of eggs and placed them under one of my best sitters. I was rewarded by a hatch of seven good chicks. These I toe-marked on the inside of the left foot.

My chicks are not fed until thirty-six hours old and they are then given hard boiled eggs mixed with bread crumbs and steel-cut oat meal. Sweet milk is given the little chicks to drink until the weather gets warm, when sour milk is used exclusively, but never the two together. After one week old, the chicks are fed a good reliable chick food. When three weeks old, they are gradually put on a developing food con-

White Orpington Chicks, four weeks old, average weight 1 pound. See second prize article "Care and Management of a Farm Flock."

sisting of wheat, cracked corn and other small grains. A dry mash consisting of middlings, cornmeal, alfalfa meal, ground oats, and a little salt is kept in hoppers so they can have access to it at all times. They also have fresh water, grit and charcoal, so they can get it when they want it.

The chicks were kept away from the main flocks and allowed good runs in flocks of about fifty of nearly the same age, after being weaned by the hens. They always had plenty of shade, and for this purpose I prefer a cornfield, but where that is not convenient, small fruit trees, or artichokes make good substitutes.

When the pullets and cockerels had grown to sufficient size to be able to readily determine their sex, I separated them and fed the male birds everything I could get them to eat, but the pullets more sparingly, just enough to keep them growing nicely.

I find the earlier I can get them to leave their coops and go on a roost the better it is for them. I aim to give them plenty of fresh air from the time they are hatched, and keep the coops and houses as clean as possible. One of the things most to be dreaded in hen hatched chicks is lice, and it is necessary to be constantly on the outlook for them. I use on the roosts a mixture of ten parts kerosene, one part creolin, and bore holes half way through the roosts six inches apart, pouring the mixture in the holes just before the birds go to roost. I find it rids the body of lice in roosting size fowls, and frees the roost of mites.

After all the chicks were housed, I went around September first to the different colonies, counting them and found that only a small percentage were taken by hawks or varments of any kind. The smallest of the entire flock will weigh two pounds apiece, there being two hundred and seventy-five on the roosts. Have sold one hundred and ten for broilers, also fourteen pullets and four cockerels for breeders, making the number raised five hundred and seven birds.

The following is the table of weights of the flock entered in the chick growing contest:

One day old, 2 ounces.
Two weeks old, 8 ounces.
Four weeks old, 1 pound.
Eight weeks old, 2 pounds.
Three months old, 3¾ pounds.

Poultryman's Practical Dispensatory

Chapter VI.—Value of Acids and Acids of Value—Protests Against Continual or Unnecessary "Drugging"

By J. H. Petherbridge

IN developing this series, it seemed eminently proper that I should first take up Elements, so my first three chapters were devoted to Iron, Sulphur, Potash, Soda, Magnesia, Lime and their combinations in so far as they touched the poultry business. Next in the natural order would have been the Acids, to have been consistent to my design to advance from the elementary to the complex, from simples to combinations. Seemingly, I switched off to a branch road in chapters IV and V by interpolating Coal Tar and Petroleum products. In reality these were only flag stations on the main line, for there exists a close analogy between the products and constituent parts of Coal, Wood and Petroleum from the chemical view-point. Not only their medicinal values, but their menaces as well, as exhibited in their more or less "irritating" qualities, are due to their several acid contents.

Of the more than 500 acids recognized by chemistry and pharmacy, but very few are of utility to poultrymen, save as exhibited in their "salts" or as one or more of the constituents of the natural or artificial "ration" gathered by or provided for the birds.

And right here I want to go on record that, although I write of drugs, I protest against continual or unnecessary "drugging." If your flock is well-bred, well-fed, well-watered, well-housed—given room, range and kindly treatment—you *should* have but rare occasion for *any* drug or remedy.

"Prevention is better than Cure," but mark this—intelligent and worth-while prevention lies in the observance of the preceding paragraph and not in the drugging or in the inoculation of perfectly well and normal chicks or chickens.

Some day we may have proved and efficient antitoxines with which to render immune our flocks from the more serious disorders, but the day is not yet. "The morning steals upon the night, melting the darkness," but it is yet too dark to use the inoculating needle.

Drugs are only a necessary evil, *as drugs*: it is far better for the vitality and productiveness of your flock that they obtain the minerals, salts and acids their economy demands from Nature's laboratory in field, forest and stream than from the druggist's shelves or proprietary preparations.

And when "shut-in," keep in mind that not only must the grain, grit, shell, meat and GREENS be ample in quantity, good in quality, but of sufficient VARIETY to furnish ALL the elements required to maintain health and vigor. Although the poultryman in his work and attendance has need of but few of the many Acids, it is wise for him to know something

White Orpington Chicks, eight weeks old, average weight 2 pounds. See second prize article, "Care and Management of a Farm Flock."

White Orpington Chicks, three months old, average weight 3¾ pounds. See second prize article "Care and Management of a Farm Flock."

of those with which we are all more or less familiar and those most frequently referred to in the poultry press.

Nitric (aqua fortis), *Sulphuric* (oil of vitriol) and *Hydrochloric* (muriatic) Acids.—Of supreme importance and inconceivable consumption in the Arts and manufacturing and in their dilutions frequently employed by physicians. Their administration to poultry, though not without value in skilled hands and faultless diagnosis, is not recommended to the laity.

Arsenous Acid.—Better known as arsenic; usually prescribed in liquid form, as Fowler's solution. I have occasionally noted its recommendation in poultry journals as a tonic and blood purifier. It is no more efficient than the Tincture of Iron, but many times as dangerous, for in order to be beneficial it must be continued in gradually increasing doses for some weeks and yet being culminative in its action there comes a time when another dose would prove fatal.

Boric Acid.—Fifteen grains dissolved in an ounce of water makes an excellent wash for cleaning out the mouth and

Made from retouched photo

nostrils of fowl afflicted with catarrhal accumulations. I referred to this acid under Soda, and stated that its therapeutic value was identical with Borax.

Carbolic Acid.—See Chapter IV.

Salicylic Acid.—Esteemed and much employed in rheumatic troubles; have seen it recommended for birds afflicted with rheumatism, but the necessary length of treatment and the cost of the drug militates against its use in the poultry yard. If your fowl exhibit symptoms of rheumatism and you cannot discover and correct the conditions responsible for it, you will find it more *profitable* to *eat* them than *treat* them with Salicylic acid.

Then there exists a group of organic or vegetable acids that doubtless at times the fowl's organism demands a modicum of, that we can best administer by giving them the run of the orchard and garden or throwing them the waste from our tables of the following:

Grapes and pineapples; containing Tartaric, Tannic and Gallic acids. Apples, pears, peaches, apricots, gooseberries and currants will supply Malic acid, a near relative of tartaric. Lemons, limes, oranges and citron offer them Citric acid. Strawberries, raspberries and cherries—both malic and citric.

It would be absurd for me to recommend the feeding of above fruits at regular intervals and too often offering of them to the penned birds would be unwise, but I am satisfied that an occasional acid fruit or berry is not only relished, but craved by the confined birds.

It is easily demonstrated that fallen fruit and reachable berries form a portion of their ration on free range.

Phosphoric Acid.—Bone meal and granulated bone ad libitum and freshly ground, untainted green bone, *in moderation* afford the fowl this necessary product to growth and upkeep.

Acetic Acid.—Vinegar is an impure dilute acetic acid, produced by fermentation; its utility in domestic science is too well known for me to dwell upon. A teaspoonful added to the water in which you boil the tough old rooster or ancient hen will help to lessen the strain on your jaw muscles and teeth.

There is another "impure dilute acetic acid" produced, not by fermentation, but by the destructive distillation of the wood of the swamp pine of North and South Carolina, Georgia and Alabama, known as Pyroligneous acid or crude Creosote. As a preservative and insecticide it is employed by some poultrymen as an application to the interior woodwork of their roosting houses and colony coops. As an insecticide it has no advantage over crude carbolic acid and, in fact, much of the crude creosote in the market is crude carbolic. Pyroligneous acid is very rich in byproducts of value; it is the chief source of pure acetic acid, wood alcohol and acetone and from the latter is obtained chloroform, iodoform and sulphonal.

Wood Tar.—Also obtained in the destructive distillation above referred to, is a semi-fluid dark brown or black substance, strong, pungent odor and sharp taste, officially known as Pix Liquidate. It has considerable medicinal value, being valuable as a dressing in scaly skin diseases and much employed in combination with other oils and syrups as an expectorant in sub-acute and chronic bronchitis.

Visiting a poultryman friend one day last summer, in the course of our talk, he remarked: "I was much interested in what you wrote in the A. P. J. about the use and abuse of Permanganate of Potash. I won't say but what you and Dr. Woods are right, but if you are right, there are many, many others that are wrong. You know I've a healthy bunch of birds, but during the late Fall rains a few invariably 'catch cold' and I have never given them anything but Permanganate; give them a house to themselves and dissolve the P. P. in their drinking water until it is rich wine color. It cures 'em. Now the question is, if you have me throw away this potash, what can you offer me to take its place?"

My reply was that I was inclined to think his naturally healthy birds, isolated and confined from the inclement weather in a dry, roomy, sunshiny (when the sun did shine), and well ventilated house, would have quickly recovered from their colds without any *medicated* water, but if in the future to ease his mind of the feeling that he ought *to give them something* and cater to his desire to give that something *in the water* to save the labor of individual treatment, I would recommend that he make and give them "tar water" on alternate days, after a purgative dose of Epsom Salts in their mash the first day of isolation and confinement.

And in case any of my readers care to try the substitution, I will state that Tar water is made by adding one pint of tar to four pints of water and shaking vigorously during twenty-four hours. Pour off the liquid and strain or filter. For poultry use to each pint of the tar water you may add four pints of pure water. Its medical properties are similar to turpentine, but very much less irritant. It also acts as a stimulant and diuretic. For acute and even chronic catarrhal conditions it is an excellent home poultry remedy. Water takes up from the tar in addition to other constituents, a small portion of creosote and *Acetic Acid,* hence I hope this personal "note" is not out of harmony with this chapter.

Lactic Acid.—An organic acid usually obtained by subjecting milk or grape sugar to lactic fermentation. It is formed whenever sugar in solution is placed in contact with

an alkaline or earthy carbonate in presence of a special ferment, as for example the casein of milk or cheese; hence it is evolved in the souring of milk, so in the feeding of sour milk, curd or buttermilk to the flock, the poultryman is availing himself of the cheapest, most convenient and desirable form in which to administer lactic acid.

True it is that certain manufacturing chemists offer in tablet form cultures of imported bacterium bulgaricum, which dissolved in sweet milk produce a milk of much higher acidity than our domestic lactic acid bacteria, but the greater acidity is more than counterbalanced by the increased cost, prohibitive of profit if you are employing soured milk for its nutritive as well as remedial value.

For two or three years past the feeding of milk, sweet, sour, whey, curd and buttermilk has occupied much space in the poultry press and many extravagant claims have been filed to the effect that, in addition to taking the place of meat in the ration, it is a cure and preventive of the greatly dreaded and much advertised White Diarrhoea in baby chicks.

Please don't misunderstand me,—the predominance of proof and testimony as to the value of milk in the ration is too great for me to dispute, even had I the desire to do so, which I have not. I cannot reconcile it with one of my pet theories that in "feeding" we should supply as far as possible to the domesticated birds the varied ration they secure in a state of nature. And we must admit that Milk is not a *natural food* for our feathered friends, unless the lark, "whose notes do beat the vaulty heavens" secures it from the Milky Way.

But when a theory runs counter to universal experience, there is evidently a screw loose in that theory somewhere. Although for poultry, milk is not *a natural food,* the fact that they accept it, thrive upon it and maintain their health with its consumption, demonstrates that we are violating no law of nature in making milk a part of their ration. And then there is that other theory apparently upheld by what we know of the process of digestion in fowls,—that *soured milk only* should be fed for the reason that in the souring of the milk "the lactic acid bacteria change part of the milk sugar to glucose, the *only* form in which sugar can be absorbed by the fowl." But the fact that many poultrymen prefer and secure good results in the feeding of *sweet* milk, evidences, not that said poultrymen are deceived, but that we have more to learn of the physiology of digestion.

If I could produce or procure milk as cheaply as many of my readers, I would certainly keep it in some form before my birds and it would not greatly concern me whether it was sweet or sour, so long as it was clean and free from mold and objectionable odor, but I would not ask it to take the place of meat or expect it to reduce my grain bills. It is my belief, based on what little I know of the limitations and powers of a fowl's digestion,—that Milk, sweet or sour, is not a proper *fluid* with which to *daily* fill *a drinking fountain,* nor the whey a desirable drink for baby chicks.

It is from the whey we obtain the sugar of milk; it is too great a tax on the digestive functions of the baby chick; it is more likely to inaugurate bowel trouble than correct a tendency thereto.

Lactic acid coagulates albumen and dissolves freely the phosphate of lime; hence it aids digestion and makes available the lime necessary to growth. Lactic acid is a natural constituent of the gastric juice, so it follows that the action of sour milk on the digestive functions and intestinal disorders *must be favorable.* But though "favorable" we have no right to assume that it is infallible, either as a cure or preventive. And some of its recommended employment is a travesty on common sense, a burlesque that at the drop of the curtain has merged into a tragedy. Listen to this from a New York farm journal of wide circulation:

"At ——— Farm all chicks are on range and growing fast and strong, some of the pullets laying. Of the 5,013 chicks put in the brooders, total loss to date is 1,181 chicks, or 23%. All this *goes to prove* the great value of *filling the chicks' crops with sour skim milk (lactic acid) as soon as they are dry enough to take from the incubator. It also proves* that sour skimmed milk given at this time will overcome the disease (white diarrhoea) and make it possible to raise a high percentage of chicks *hatched from eggs laid by infected hens.* One dose at this time has more value as a preventive and cure than all the sour milk fed as soon as the chicks are able to drink it themselves." "We fill the crops of the newly hatched chicks with a pen or medicine dropper filled with sour milk and *squirt it* down their throats."

And only 23% succumbed! Those "infected" hens certainly handed down some vigor along with the germs! I wonder how they knew the hens were "infected" and if they *knew* why they incubated their eggs?

Bacillary White Diarrhoea is comparatively new among the *recognized* ills that afflict chickendom; in my humble opinion, it is fortunately likewise RARE. Like its dread partner in crime, Diphtheritic Roup, it is held responsible for losses and conditions of ill-health that are due to minor, preventable and curable disorders.

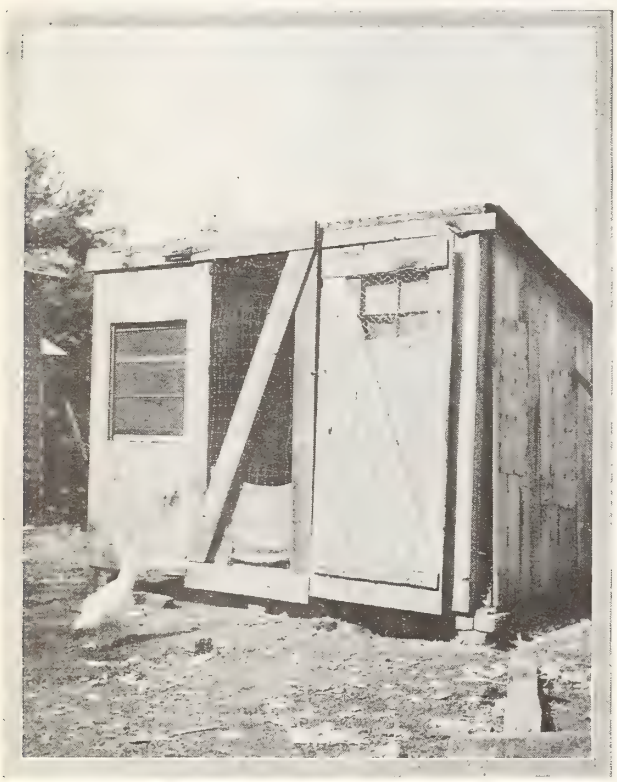
It is in the interest of the great poultry industry that the individual poultryman ceases to be continually on the *lookout* for the appearance of these fatal germ diseases, but constantly and intelligently on the *look-in* for conditions of housing, sanitation and improper diet that are responsible for the catarrhal colds of the adult birds and the abnormal droppings of the baby chicks that he mistakenly diagnoses as Roup or White Diarrhoea.

A Webster Farm, New York, champion strain White Plymouth Rock cock. This line has been a prominent winner for years at New York, Philadelphia, Cleveland, Washington, Williamsport, etc. The quality of this line commends them to all. Made from retouched photo.

The State Experimental Stations are trying for, and doubtless in good time will secure, a "strangle-holt" on these obnoxious germs, and when they do, we will all doubtless be invited to the obsequies. And finally, brethren, in bringing this article to a close, just a word of caution in the feeding of sour milk:

Fermenting sour milk is capable of forming an intoxicating drink; keep your receptacles clean and don't use tomorrow what was left over from today. And if you are of those who keep the pink tea of Permanganate before the flock, cut it out the days you feed sour milk, for the Lactic acid of sour milk produces in contact with the Permanganate of Potash, acetic aldehyde, a powerful and poisonous alcohol.

Practical Fresh Air Houses for Poultry



Adapting Open Front Houses to Special Requirements of Location

By Maurice H. Decker, La Porte, Ind.

ONE of the best applications of the oft-repeated principle of poultry keeping that one's equipment must grow with the flock and extent of operations is found on the plant of Mr. Stroke, one of my neighbors. Too frequently the poultry plant of the beginner is laid out in advance, made to order as it were, rather than built as required, and added to from time to time, as the need of the business indicates.

Mr. Stroke has shown considerable ingenuity in keeping the cost of his houses down to the lowest item and in having every inch of space in use. He is a baker by trade and started his flock of White Leghorns at his present location a little less than three years ago with the determination of building up a first class bunch of layers on the sound basis of having them strictly pay their way. His difficulties in the

The original 8x8 ft. brooder house. See article "Pratical Fresh Air Houses for Poultry."

housing question were augmented by the fact of his occupying rented ground, which forbade any attempt of permanent building.

His first structure was an 8 x 8 colony house, made portable by being built in sections, which housed two universal hovers in which his flock of layers were reared. In the fall it was added to, to make a laying house 8 x 40 ft. in size, in which 125 pullets were successfully wintered.

Mr. Stroke is an enthusiastic believer in fresh air and the Dr. Woods' type of house, and this laying house was intended to form the 8 ft. front section of the 20 x 40 ft. Woods' building which he had originally in mind as a goal. This long narrow house was very low in head room, and to this condition, along with the facilities for ample ventilation, Mr. Stroke attributes his remarkable freedom from colds in the flock. Last spring a house 12 x 20 ft. was erected to hold the hover and in mid-summer doubled in length for roosting quarters for the youngsters. This building was built with the monitor sash near the top and was so planned to form the rear section of the Woods' fresh-air house shown in the accompanying photograph, which pictures the present progress of his building operations. This fall all that was necessary was to take

8x40 ft. house turned around and placed against the 12x40 ft. building. Also showing a flock of fine layers with their owner. See article "Practical Fresh-Air Houses for Poultry."

down the narrow house and reset it up to the other, and the trick was done. Large screws are used to hold the house sections together, and the roof is made removable and portable by being held down at the seams by wooden strips in place of nails. Next year the brooding will be done in a new 10 x 20 ft. section built onto the laying house, and in the fall the partition will be removed and the pullets given the run of the entire building.

Shed Roof Laying House.

Last season I wished to build one of the simple shed roof laying houses of medium width with all the fresh-air accom-

A Practical Fresh-Air Shed Roof Laying House. See article "Practical Fresh-Air Houses for Poultry."

modations of the regular open-front house, and, after thinking the matter over, put up the building shown in the accompanying photograph.

The dimensions are 60 x 16 ft., height, rear 5½ ft., front 7½ ft., measurement taken inside of building from floor to

roof. Four front sash are 1½ x 6 ft., sash on east end 2½ x 5½ ft. Screened openings are each 3 x 15 ft. In addition to the two front doors, there is one at each end, all 3 x 6½ ft., which makes a very convenient house for cleaning and affords extra ventilation in summer. In the fall burlap curtains are placed over the screened openings. They are tacked to the bottom of opening and fastened to a pole at the top, which is raised or lowered by cords. In cold weather the curtains are pulled up to within one foot of the top, which leaves an open space one foot wide protected by the drop roof in front. Only in driving snow storms, when fine snow sifts in even the tiniest of cracks and chinks, are the curtains completely closed.

The floor is raised one foot above the outside ground and at present is of tamped gravel, but will be cement next year. The house is fine and dry inside. The interior is divided into two rooms of equal size by a light partition into which is built a large self-feeding hopper, capable of holding 1,500 lbs. of dry mash, and 500 lbs. each of grit, shell and beef-scrap. Both pens feed from this hopper and it is furnished with covers over the feeding troughs to control any sudden aversion to exercise on the part of the hens, and to prevent waste from mice. Automatic feeders for whole grains hang from the girder which supports the rafter in the center. I use droppings boards at present, but intend to do away with them in the near future. I figure that the work saved by their absence more than over-balances the extra birds the house will accommodate when they are present.

Back Lot Fancier's Plan Works Well

Though Limited to 20 by 20 Feet is Enabled to Keep up With the Fancy and Enjoy Breeding Pure Bred Fowls

By L. M. Herrington, M. D.

SOME one has said that God never made a man so powerful physically that he did not give to a weaker an inventive genius that enabled him to devise some instrument of warefare to equalize their respective strength. So the poultry raiser with but a few square feet of space must think of ways to raise larger numbers of chicks that he may eventually have more winners for the show room. I note with interest a suggestion in a recent issue that one fancier may raise for another at a dollar per head.

When a man asks me the price of a sitting of S. C. White Leghorn eggs, I give them to him and tell him I want the choice of the best bird (when mature) from the eggs.

About the time when I wish chicks hatched I place an ad in two Pittsburgh dailies, stating that I want a few fancier's wives or expert chicken raisers to take eggs from exhibition stock to raise chicks on the shares. I sift out the many answers and send to each the terms on which I will furnish eggs. While I am not exempt from the annoyances of the average poultryman, I make due allowance for losses of eggs from bad incubation by hens or incubators and from losses due to rats, cats, weasels and other marauding animals, also from infertile eggs.

Two propositions are made to those taking the eggs on shares. First, that I get my choice of the flock at the rate of one bird for each fifteen eggs sent out, or second, that I get one chicken from every five raised. The first proposition encourages care and an effort to raise all that are hatched, the second encourages effort where hatches are poor.

If two hundred chickens are raised in all, I get forty of the best ones. I have them raised near enough to me that I can go out and select my share of them.

Where is there a poultryman that is perfect? One year I hatched eighty chicks and reared seventy-nine of them, but next year my percentage of loss was about sixty. The average man is honest, so is he watchful. One man with poor hatches awaited my complaint. When it did not arrive and I expressed confidence in his integrity, he said: "I placed ten of your eggs and five of mine under each hen. My five hatched and only part of yours did." Not every one could be so ready.

"Some people will secrete or sell the best ones," I hear you say. Maybe, but I have the first one to find yet. I sent one man a pen of birds four years ago that won first prize at Wheeling and a third prize at Pittsburgh the same year, awarded by Judge Denny. I got twenty-five birds from him in October in addition to those sent him. He has line bred those, in a way, since I have lent him a male bird occasionally. Only a few weeks ago that man sold a cock, a hen and a pullet, at five dollars each, that won a first each at a local show.

In Col. Russell H. Conwell's lecture, "The Silver Crown, or Born a King," he speaks of a land in which the king was to be selected from among those whose life work was done for humanity—for his fellows. At last they selected a man who had spent his life building dams just below the frost line in the mountains of his native country and conserved the water that it might flow gradually into the valley below, where it warded off drought and famine.

The man who has given the poor fancier the chance to raise good stock with little or no outlay of money, while prices range from five to twenty dollars a sitting for fancy eggs with frequently nothing more than a few scrubs from such, may not have been born a king, but he does more for humanity than czars, kings and emperors that place their

First cockerel, great Chicago Show, January, 1914. Just as the camera snapped, the bird moved his head. The only retouching done was to brighten up the blurred appearance. Bred and owned by Fred B. Keifer, Highland Farm, Marshall, Illinois.

people in battle array to shoot down men against whom they have no enmity whatever.

Following this plan, I sell few if any eggs for hatching, but manage to keep even, though limited to very small quarters for raising chicks, and greatly enjoy the breeding of good birds. This plan enables the back lot breeder to compete with the man owning acres, and gives the poor breeder a chance to get thoroughbred stock of fine quality at slight expense, for if the fancier giving out eggs on such a basis, does not send his best, he cannot expect good birds in return.

Try this plan, gentlemen, and you will greatly help the industry thereby, in raising more and better poultry, and incidentally bringing to light some poultry fanciers that otherwise might never have had an opportunity to show their ability along this line.

Mating Cornish Indians for Best Results

Breeders Against Double Mating of Dark Cornish—The Law of Balancing Follows Out Closely In This Breed

By John W. Ward, Jr., Pennington, N. J.

THE leading breeders of both England and America, the word America taking in both the United States and Canada, are strongly against the double mating of Dark Cornish—that is, making up one mating to produce exhibition males and another to produce exhibition females.

It may be possible to get better individual birds at first by a system of double mating, using big, well developed hens, whose "double lacing" or penciling and lacing, is so broad that the mahogany or bay is almost crowded out of the feather in every section of the body; and mating with these females a male that shows very little red, the less the better, in the saddle, hackle, breast, and having feathers in all sections whose stems are black, or slate color rather than red or brown in color, for exhibition males. Choose good type hens with a more "open double lacing" (the double lacing being fine instead of broad), on a good rich ground color in which the predominating bay can easily be seen even from a distance in looking at the bird, mate with these females a male directly the opposite from the specimen described above, showing rich red in saddle, wing bows, and a rich red

Made from retouched photo

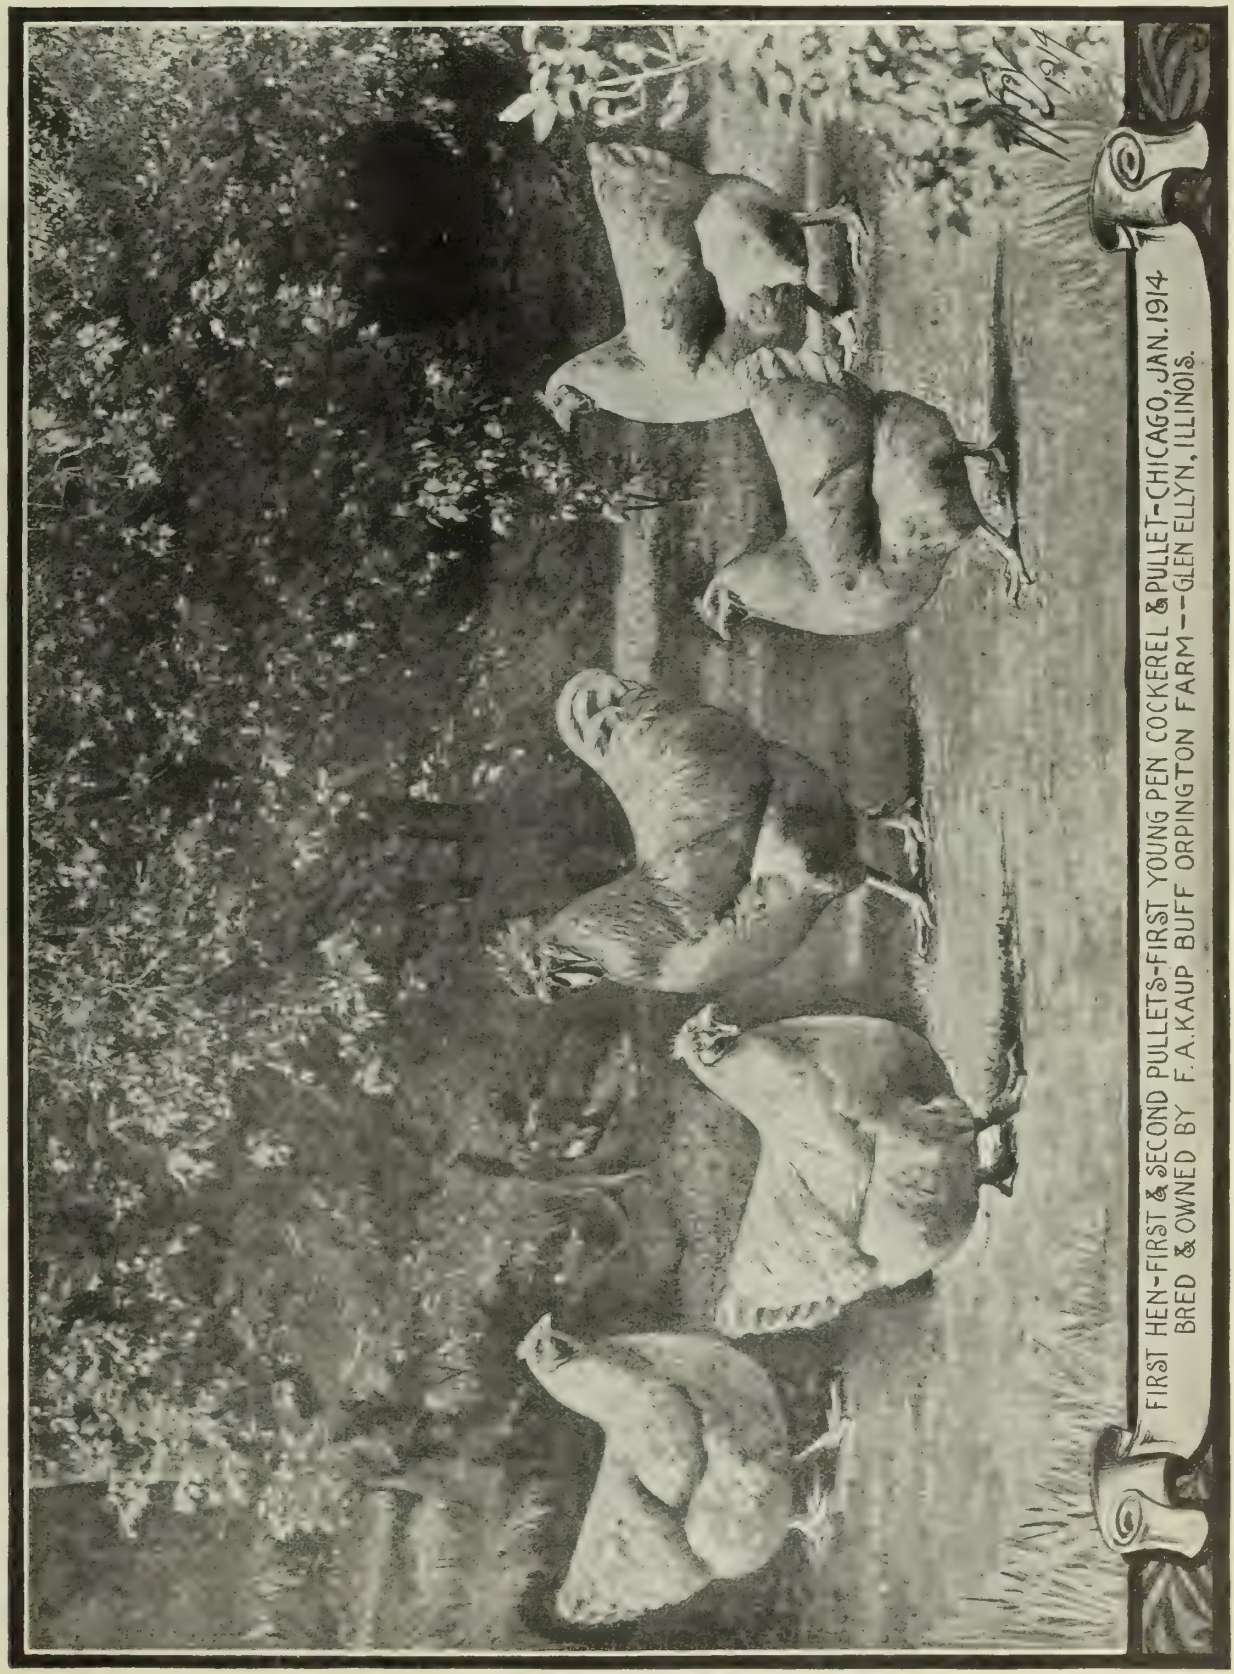
stripe in hackle, the breast alone being a solid color of deep metallic green, almost black. I believe that a male with a "splashed breast" will produce the same characteristics in his "get," both male and female; and a good red stem to feathers in all sections, especially in breast and back, is necessary for exhibition females. This is the system employed to double mate Cornish, but as one leading English breeder said to me while in England a little over a year ago, "For new blood give me a bird, every time, either male or female, from a uniform flock, a flock single mated for results in both sexes at one shot," and I believe every leading breeder of Dark Cornish on both sides of the Atlantic agrees with him today.

Type stands first in the mating of Dark Cornish of the present day, for Cornish type is certainly different from any other breed type and so a distinct trade mark. Having type, select another characteristic of our breed, hardness of feather, and as a key to the whole bird examine the feathers on the saddle, for if these are "hard," short, it is safe to say the

First prize S. C. White Orpington cock, 1913, bred and owned by Woolery Farm, Bloomington, Ind. This wonderful cock won first at National Club meet, all the best in the land competing.
Made from retouched photo

bird is "hard" all over. Having these two things in a bird we may now look to color.

The ideal is hard to get in any breed, or sex of a breed, but my ideal of what a Cornish female should look like reads like this; Hackle, a deep rich greenish black, other feathers in all parts of body, with the exception of main tail feathers and fluff, both of which should be black, a deep rich mahogany red for ground color, each feather laced and penciled once within the lacing about equally dividing the ground color, with a narrow line of greenish black following the contour of web of feather. Stems of feathers next under color, red.



For an ideal male I would choose a bird with a good green hackle, each feather bearing a rich red shaft, taking care that the red does not gain a hold on the tip of feather. Back a good solid greenish black with a rich red showing on saddle. Tail, small, of rich greenish black color, free from any purple barring. Wings, rich green in color with some red showing on wing bows, and flight feathers and secondaries edged with bay, the secondaries having one-third of the lower web edged with bay. Breast, solid color, rich metallic greenish black. Stems of feathers, next to under color in all sections, red. Specimens like the above will give exhibition cockerels and pullets in a single mating.

The law of balancing follows out very closely in Dark Cor-

nish. I do not claim that you can take one extreme and mate with another for results, but you can take a female without some of the qualities mentioned above and mate with a male that has some of these qualities in an exaggerated form and expect fair results. Always avoid a pale or faded ground color in females and avoid very much purple in males, though a good many good Cornish males have it.

Study your matings as you would a book, for though we may read and gain knowledge from the pen of others, there is absolutely nothing like practical experience.

As a practical fowl the Cornish are steadily gaining in popularity, having made exceptional records as layers in leading egg laying contests. The egg is usually brown in color, though in some instances very light colored. The egg is of good size, averaging in weight about twenty-four ounces to the dozen. The pullets begin laying at about six months.

Mendelian Inheritance and Pedigree

The Manner in Which Nearly All Characters Are Transmitted—The Use of Pair Matings in Establishing a Strain

By Chas. A. Simmonds, Camp Point, Ill.

MENDEL interpreters and experimenters have discovered many laws of heredity the knowledge of which is of value to the poultry breeder. Probably the most valuable discovery is that of the purity of the germ cells or male and female gametes that unite to make the complete germ of the fertile egg. Thus a fowl may be in blood ½ White Dorking and ½ Clube type Black Langshan but everyone of its germ cells will be pure in its characters, pure black or pure white, tall or short, rose comb or single comb but will not possess any two of such opposite characters (however, it may possess a character of blackness and also a "repressing force" which will repress the black pigment and make the plumage of the fowl white).

Of two opposite characters such as black and white, tall and short, etc., one is dominant and the other recessive. Thus if a pure black bird is crossed with a pure white one, all the progeny of the mating will be black in color because black is dominant over white. If the progeny of this pair is mated together, brother and sister, they will produce progeny one-fourth of which will be pure white in color and blood, another one-fourth will be pure black in color and in blood, but the balance (one-half) will be pure black in color, but in blood one-half black and one-half white the same as their parents. This segregation is explained by the law of chance, i.e., there is a chance that a white cell (one possessing the character which produces white plumage on the resulting bird) will meet a white cell and there is also a chance that a black cell will meet a black cell, but there is twice the chance that a white cell will unite with a black cell or vice versa.

This is the manner in which nearly all characters are transmitted, but there are some characters the transmission of which is limited to sex. Among these are fecundity, which is transmitted from mother to son and from father to daughter and barring in Barred Rocks, which is transmitted from a female to both sexes of her progeny, but from a male only to his sons.

It seems there are a few who are not willing to accept Dr. Pearl's theory in regard to the transmission of fecundity. We must remember, however, that the majority of poultrymen do not use trap-nests or breed for egg-production and if they did they are not scientists enough to analyze the results of their own experiments. The writers who have condemned Dr. Pearl's statements have used much ridicule and little argument. Personally, I have trap-nested for the past eight years and the results of my pedigree breeding prove to me that a heavy laying hen invariably transmits her fecundity through her sons who in turn transmit it to their daughters. Of course, experiments in regard to breeding for egg-production must be extensive to secure accurate results. There are many things besides the inheritance of fecundity which would influence the egg record of a hen such as constitutional vigor, tendency to broodiness, feed and care, etc.

The law of transmission of barring in Barred Rocks was discovered by crossing Barred Rocks with other breeds. It was found that when a Barred Rock male was mated to females of a breed possessing no barred blood the progeny would generally be barred males and black females, but the opposite cross or Barred Rock females mated to a male of foreign breed produced barred birds in both sexes.

Now, in conducting this and similar experiments, it is very necessary that the experimenter should know enough of the science of the subject to be able to rightly analyze the results of his experiments. For instance, a Barred Rock male, if mated to White Rock or Rhode Island Red females, will produce barred progeny in both sexes, seemingly disproving the theory. However, Rhode Island Reds (as well as several other of our American varieties) contain a small amount of Barred Rock blood which would, of course, become strongly assertive if crossed with pure Barred Rocks. The White Rock is a sport from the barred variety and so, of course, when crossed with the parent bird would be expected to produce nothing but barred progeny in both sexes.

Professor Spillman, who discovered this law, explains it by stating that the natural sex in Barred Rocks is maleness, and thus a sex character in the germ cell produces a female. And further that a sex character and a bar character are never found in one and the same germ cell and the male has the sole power to transmit sex. Characters, the transmission of which is limited to sex, are found in other animals and in the human race. I remember when exhibiting at one of my first shows (about 10 years ago) on asking the judge (who was then and is now at the head of the profession) some questions on mating the breed I had on exhibition. I was told, among other things, that mating was more or less of a gamble among even the best of breeders. This was very true of mating as generally practiced then, but the past ten years have seen a wonderful advance in our knowledge of the laws of heredity.

Made from retouched photo

There are several different methods of mating and pedigreeing to produce exhibition birds in practical use. The method most commonly used is to take the best male one can procure and mate him with as many females as can be obtained (up to the limit of 10 to 15, according to breed) that are of general high quality and strong in points wherein the male is weak. The eggs from each pen are set separately and the chicks marked so the breeder may keep a pen pedigree, knowing the sire but not the dam of each chick. With this system mating is indeed "more or less of a gamble," especially so a few years after introducing new blood into the strain.

A few breeders who find it inconvenient to trap-nest, but realize the value of accurate pedigrees, are using the single

or pair mating system, mating only one female to a male or penning the females singly and changing the males from pen to pen. A large number of our most successful breeders have used pair matings in founding their strains and in introducing new blood, using other matings of several closely related females (such as a pen of pullets raised from a hen in one of the single pens) for their main crop of chicks. While this system has many advantages, it would be expensive to carry on on a large scale and has many limitations so far as securing the best results is concerned.

By far the best method is to mate full pens of 10 to 15 females with each male and use trap nests. The advantages of trap nests may be summed up in the following:

1. By retaining the best layers for breeders the following

First prize Barred Plymouth Rock cockerel at Indianapolis, February, 1914, 36 birds in class. He also won championship and color special in same show. Bred and owned by W. H. Goddard, 704 Riverside Ave., Muncie, Ind. Made from retouched photo.

season and selecting males bred from females who have made a good "long distance" (not less than 365 days and better several years) egg record, the breeder can greatly increase the average egg-production of his flock.

2. You can keep a pedigree record of the chicks raised from your trap-nested matings which will be very valuable, not only in making your matings in future years, but from an educational standpoint as well as affording first-hand knowledge of the laws of heredity. To be most valuable in this way the pedigree work should be accurate and extensive and accompanied with written descriptions, photographs and egg records of all individuals bred from.

3. By working along Mendel's laws you learn which birds are pure in their characters, thus ascertaining the true breeding value of each individual.

4. By handling each female every time she lays you become familiar with the fancy points, type, etc., of each individual female and note instantly any change in appearance, as over-fat or out of condition in any way.

5. Liberal house room and shaded grass covered yards may be supplied at much less expense per bird than where the single or small mating system is used.

6. By mating females of several different strains with an extra fine male you can cross and recross his progeny in succeeding generations, thus concentrating his blood in the strain without close inbreeding.

7. As only one hen can enter the nest at a time, all danger of valuable eggs being broken by too many hens crowding on the same nest or by hens fighting on the nests is eliminated.

8. As the pens are visited every 2 hours to release any hens that have laid, and gather and mark their eggs, all danger of eggs being chilled in cold weather is avoided.

In hatching the eggs laid by the trap-nested hens it is necessary to use broody hens or incubators having pedigree trays or frames to use over the regular trays to confine the chicks hatched from each hen's eggs in a separate lot until removed from the machine and marked. For marking the chicks there are several devices. Most everyone is familiar with the poultry punches for marking chicks by punching holes in the webs of their feet. With these punches 16 different lots of chicks may be identified. By making slits (using scissors) instead of round holes, the number is increased to 31 and by combining these two marks a large number of different lots may be separately identified. A somewhat more expensive but more convenient system is to band all breeding birds with colored bands, giving each pen a separate color. Then, in marking the chicks, use the colored celluloid bands corresponding to the color of the pen from which they were hatched and the poultry punch marks to identify the progeny of each individual hen in the pen. The advantage of this system lies in quick identification and in being able to compare the quality of the chicks from the different pens without handling.

Every time I write an article on breeding, I receive a number of inquiries asking for charts and systems that will show how to produce and improve a strain of prize-winners. Impossible! There never were two birds produced that were exactly alike

First cock Chicago Coliseum show, 1913. This bird has wonderful type and carriage, with grand tail finishings. Bred and owned by Robt. D. Parmenter, Knoxville, Ill. Made from retouched photo.

or that bred exactly alike. My advice to the beginner is study your birds. Learn their individual points, their pedigrees, breeding tendencies, etc., and then when you finish mating this season's pens, begin thinking about how you are going to mate your pens for next season. If you will study your own birds and their pedigrees and breeding tendencies, you will soon learn to mate with much better results than anyone not familiar with the birds could get. Working along these lines you will soon come to learn the value of blood lines, but listen! the foundation of many a great strain was a bird of grand individual merit but inferior blood lines, simply a chance production that happened to fall into the hands of an expert breeder who knew how to use it to bring out its good points in his strain.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Best Greetings for the Season.

ONCE again we approach the great holiday season and the end of the old year. The year 1914 has been one of many happenings out of the ordinary. This country has experienced an unusual period of business depression and financial stress, has weathered it safely and is now well on the way to better business than ever before and more prosperous times for everybody. With half the world at war across the seas, we have kept the peace and won much honor thereby.

We have many things to be thankful for and not the least among them should be our thankfulness for this great land of peace and plenty, safely situated between two vast oceans and inhabited by peace-loving, resourceful, enterprising, active, friendly people. It's a good land to live in, this America of ours.

The year 1914 has been a busy one for the staff of AMERICAN POULTRY JOURNAL. We have worked hard to give our readers a bigger, better and more useful magazine than ever before and many of our friends and readers have helped to inspire us to greater efforts by their kindly encouragement and appreciation. We have not done all the things we hoped to do and planned to do. Unusual circumstances, which we could not control, handicapped accomplishment somewhat. It has been generally considered a rather difficult year in the magazine business. Thanks to the excellent generalship of our editor-in-chief we have made of 1914 a very good season. Each member of the staff has done his best and feels the inspiration to strive to do still better in the year to come. We can safely promise you that the AMERICAN POULTRY JOURNAL for 1915 will be even more interesting, instructive, helpful and attractive than ever before. We shall all strive our level best to please our readers and to prove helpful to all who join the great and growing AMERICAN POULTRY JOURNAL family. While our magazine is made primarily for the benefit of our readers, our good patrons, the advertisers, can rest assured that we will endeavor to serve them to the best of our ability.

AMERICAN POULTRY JOURNAL gets out on time, you don't have to wait for it until the middle or the last of the month. Generally by the second or third day of the month we begin to get inquiries concerning matter published in the current issue, showing that the paper is delivered promptly and is as promptly read. It is important to the advertiser to be represented in a magazine that gets out on time, and it is doubly important to be represented in a magazine that *is read*. Judging from the editor's mail A. P. J. is read from cover to cover before the end of the first week in every month. If, as sometimes happens, once in a great while, our magazine happens to be a day or two late, we begin to receive letters from subscribers asking what is the matter. We always make an effort to get into the mails before the first of the month of issue, and we generally do. There are a good many of our exchanges that we do not get before the middle or last of the month of issue.

We shall continue to try to live up to our motto, "We Lead, Others Follow." We hope to give you more for your money in 1915 than has ever before been done by any poultry magazine, our own not excepted, and we shall be grateful for YOUR helpful encouragement. We want every reader to feel that he has a share in making AMERICAN POULTRY JOURNAL more helpful to readers everywhere, and we hope that each one of you will keep us informed concerning your experience and progress.

We take this opportunity to extend our thanks to all of our friends and patrons for so much helpful encouragement and inspiration during the past, and to wish you one and all a Very Merry Christmas and a Most Happy and Prosperous New Year.

Editorial and Business Staff of American Poultry Journal.

Prosperity Right on Deck.

THE calamity howler, the man who thinks that this country and the whole world is headed straight for the "demnition bow-wows," that hard times will prevail and that nothing will ever be right, is about the most depressing individual to have to listen to that we know of. Calamity howling is a disease, a combination of ingrowing grouch, a disordered liver and a pessimistic digestive system.

We have a few poultrymen friends who seem to have been bitten by the calamity bug. They can't see anything good in the present business outlook, they grudgingly admit that a *few* may perhaps get a little slice of better business, but they can't see how it will benefit them or *the many* and they feel sure that there is nothing but slump and depression ahead. When you meet that sort of calamity howler, don't argue. It is worse than useless. He isn't happy unless he is miserable. He don't want to be convinced that good times are close at hand. He gets a sort of morbid satisfaction out of being pessimistic and because misery likes company he would enjoy having you partake largely of his particular brand of gloom. Such folks are bound to prove depressing to the most ardent optimist at times, if he is obliged to listen to their tales of woe. Don't listen if you can help it. Don't believe that even the success of a few does not matter. If even a few succeed and prosper, others are bound to benefit by it. Every successful prosperous individual helps to benefit others. Prosperity is very "catching" if you don't try to immunize yourself with big inoculations of gloom.

Quite recently the *Boston Globe* said editorially: "One of the sure signs that the financial situation is clearing is the action of national banks in redeeming the emergency currency. The financial outlook is better every week."

There certainly is more confidence than ever in financial and business circles. The

outlook continues good. Mills and factories are getting big orders for a wide range of commodities, with urgent demand for prompt deliveries and certain cash payment. That means more work and more money for many. Export trade is increasing rapidly and we have only just made a beginning. The United States is selling more than it is buying and under such conditions the country just *has to be prosperous.* Bradstreet's reports: "Cheerfulness is more in evidence than at any time since the war began."

Production in this country needs boosting and development. We need to produce more. Business is improving and will continue to improve. Producers can't afford to indulge in watchful waiting; they should get busy. The men with plenty to sell should realize large profits. The demand for American goods of all kinds is increasing and it is only a short time when the demand will be greatly in excess of the supply. That will mean better prices and big profits for somebody. Why not work hard to get your share?

Yes, this does concern YOU, Friend Reader. Anything that betters business conditions is certain to benefit the poultryman. Poultry and eggs as important foodstuffs are, right at the present time, receiving world-wide recognition. The British government is urging all home and colonial poultry keepers to produce more poultry and eggs and is issuing special circulars telling how to feed for best results and how to utilize available foodstuffs now that certain grains are so largely used for other purposes. In the United States our agricultural stations are all urging poultry keepers everywhere to produce more and better poultry and more and better eggs.

Right in our own United States the demand for poultry and eggs is steadily increasing and the prices are improving. In our own immediate locality the demand for eggs at prices that are high even for the high price season, is unusually good. The crop seems to be short and buyers in early November complained that eggs were difficult to obtain at any price. The parcel post offers a good opportunity for the producer to sell direct to the consumer. Turkeys, chickens and eggs, with other farm produce, are bound to tax the carrying capacity of Uncle Sam's Post Office Department this holiday season. It is a good time to get out and hustle for your share of the getable business within a radius of one hundred miles of your home plant. If you get out and hustle you can sell all the poultry and eggs that you can produce and can get good prices. There isn't the slightest danger of overproduction. Even on our little experimental plant we can't begin to supply the demand that comes right to our door. We have more call for eggs and table poultry than we can furnish and the prices offered are much better than for several years past. Grain has eased up a bit in price and should soon be more nearly normal.

Boom and consume United States products. Get out and hustle for near home business and get your share of it. There is going to be a big demand for hatching eggs and breeding stock. The interest in poultry keeping was never greater and it never was a healthier and more wholesome interest than at the present time. A host of beginners are going to start with standard-bred stock, for the pleasure there is in keeping thoroughbred fowls, and also for the satisfaction and profit that comes from having a home flock, no matter how small, to help reduce the cost of living and supply more delicacies for the home table.

The daily newspapers will supply you with abundant proofs of prosperity, if you keep your digestion and liver in good working order. Remember that life depends upon the liver. Healthful optimism is good for you and good for your associates. Turn a deaf ear to the calamity howler and forget him. Good times are here and they are going to get better. Prosperity is right on deck!

Our Cover Design.

A COVER DESIGN to be of real value to a publication must, first of all, be attractive, again it must be appropriate for the business and for the season, and last, but not least, if it tells a story it becomes doubly effective. We believe our cover this month shows all these requirements to perfection and our readers will agree with us after studying it that it is the best one we have published to date.

The lady in the picture hails from a foreign country now at war and our Mr. Stahmer caught her in an admirable pose showing her in the act of catching the Christmas goose. We just wonder if this lady would have had a goose for her Christmas dinner if she had remained in her Fatherland.—[EDITOR.]

PEACE ON EARTH, GOOD WILL TOWARD MEN.

O'er the sea with the battle's roar
The cries of the wounded mingle
And crepe is hanging from many a door
And sad sound the sleigh bells jingle.
At the poor soldier's home the wolf stalks around
And he spares neither child nor mother
So let us rejoice, we are safe and sound
In the land where we love each other.
—L. A. S.

Play the Glad Game.

HAVE YOU ever read the story of "Polly Anna," the "Glad Book?" It is only a simple little story about a little girl, who, no matter what happened, always tried to find something to be glad about and to "play the glad game." The book will do you good even if you are a bit blase and inclined to scoff. There is a whole lot in suggestion and the little Polly Anna book suggests much gladness and some very uncommon reasons for "just being glad."

The editor's family read that book aloud and enjoyed it and many, many times since, when things did not run smoothly, the "glad game" has helped a lot. As Polly Anna says, it is really surprising how many things you can find to be glad about if you only try.

While getting this number of A. P. J. ready for the printer we have had abundant opportunity to put the "glad game" to the test and it sure has helped. Our boy came home from school with a severe case of diphtheria and we went promptly into quarantine and canceled some important visits to poultry plants. But we could be glad of a good nurse, a good physician and that prompt measures brought comfort and rapid improvement to the little patient. At the same time our spring was torn up to be made deeper on account of low water, and for two days we had no water except from a spring in our woods, but we were glad of that spring and that we were able to get that water even from that distance. We also had reason to be glad that after completing the new well, at a depth of only ten feet, that we have in it over seven feet of ice cold water from a bub-blind spring, which is now at the low water level of the dryest season for many years. Our helper, being green at the work and not having supervision because of the many other things we had to do, neglected some of our fowls and started a little trouble for us there, but we could be glad that we discovered it in time and that it was no worse. We can also be glad that in spite of many difficulties we managed to attend to our work for this magazine and avoided delay in going to press. We agree with Polly Anna that you *can* find things to be glad about if you try hard enough. Sometimes it may seem very difficult to find anything to be glad about, but you can if you *try* and make a real business of playing the glad game. Try it. You may think that you have come to scoff, when you first meet Polly Anna, but, if you are wholesomely human, you will be sure to remain to pray. Right now is a particularly good time for everybody to play the glad game, for this should be the glad season.

A Difference of Opinion.

EXHIBIT A.—An editorial from September AMERICAN POULTRY JOURNAL:

"OUR 46TH ANNIVERSARY IN JANUARY."

"In January AMERICAN POULTRY JOURNAL will celebrate its 46th birthday. January 1, 1915, marks the beginning of the 46th volume of the "oldest and best" poultry journal and we intend to make the occasion a memorable one.

"The January issue will be a special birthday edition printed on high grade heavy enamel book paper with a special cover to match. Artist Stahmer has prepared an attractive cover design in three colors to celebrate our anniversary.

"The editorial staff is preparing a number of special articles that will make this birthday issue one of unusual and long to be remembered interest. There will be a number of unusually interesting articles giving the experiences of men and women who know how and who are doing things in the poultry world. We are planning for an edition of from ten to twenty thousand extra copies in addition to our big regular monthly edition, and these extra copies will be circulated among live, wide-awake poultry keepers who are certain to join the big family of AMERICAN POULTRY JOURNAL subscribers.

"A special feature of this Anniversary number will be the absence of free reading notices. Following our motto of "We lead—others follow"—we believe that the time has come when these notices have ceased to be of any value to advertisers. The readers are fatigued with reading where this breeder or this manufacturer has the greatest fowls or goods on the market. They have come to consider it as "worthless" and do not read them any more.

"In place of these free reading notices, we will publish high grade illustrations of poultry farms and appliances together with unretouched photos of fowls. In this way the buyer knows what he is getting and can learn more from one photo than he can from a page of reading notices. The picture tells the story at a glance and tells it truthfully, therefore we will cease publishing these readers.

"If you have not already renewed or advanced your subscription, DO IT NOW and make sure of the 46th Anniversary Number. You will want it. It will be well worth while and it will be a magazine that you will desire to give a permanent place in your poultry library.

"Line up now for the celebration of AMERICAN POULTRY JOURNAL'S 46th birthday."

Exhibit B.—An editorial from the October *Poultry Item:*

"WHAT YOU GET FOR NOTHING IS WORTH JUST THAT."

"In no other magazines of national circulation is the 'special mention,' 'reading notice,' 'write-up,' 'puff' or

what-you-may-call-it evil so rampant, and so really obnoxious and overdone as in the poultry journals.

"From the highest to the lowest of the journals 'everybody's doin' it,' and from the highest to the lowest of the advertisers, almost everybody's asking for it; and we halt at the portals of the 1914-15 show season to ask: Is it right? Is it fair? Does anybody read what's written? Does it do anybody any good?

"We are firm in the belief that it does not. We are, therefore, beginning with this October issue which carries awards of the vanguard of fall fairs, taking the first step toward the elimination of practically all such matter—and particularly that prepared in this office—from the columns of the *Poultry Item*. The first step, as may be noticed in our accounts of the New York State Fair at Syracuse and of the Great Allentown Fair, consists in the omission of 'special mention' of prominent winners as a preface to the publication of the awards. We believe that space can be devoted to other matter which will be of far more benefit to the industry, to the fanciers and breeders and to the *Poultry Item* than would be a repetition of what is given in full detail a little farther down the page. We shall continue this method of handling show accounts right through the year for all shows—large and small.

"There is inborn in every man—if he be a real, red-blooded, honest man—a genuine sportsman, and an American, a distaste of all sham, all favoritism, everything unreal or faked, which amounts to positive hatred. And here we are—a set of men (and women, bless 'em) who have made almost a billion dollar industry out of the 'chicken business,'—asking on the one hand and receiving on the other—sham 'special mentions,' unreal 'write-ups,' faked 'endorsements,' pure 'favoritism' in show accounts which, nine times out of ten, appeal far more to our vanity than to the common sense and dollar supply of those who read such stuff and who are to be our future patrons.

"Bah! let's be done with it—all of it. Let's declare ourselves independent of all such little petty tricks of the theatre press agent, the 'patent medicine gang' and the politician.

"The *Poultry Item* has had such a movement under consideration for a long time, as the burden of preparing such 'write-ups' grew greater month by month. It heartily commends the sweeping action to be taken by the AMERICAN POULTRY JOURNAL on January 1, 1915, and will have more to say on this subject later—when obligations now on hand have been fulfilled.

"Our mind's made up, however, that we will have our pages just as clean of such 'taffy' as are those of other journals of standing. It is a forward step in which there is promise of better things to come and we have no fear of the outcome.

"It has been said that a journal is valuable as an advertising medium in inverse proportion to its freedom with free write-ups. The more free space, the weaker the paper. We believe the advertiser whose product must be bolstered up with a lengthy recital by the editor is harmed, not helped. We shall, therefore, no longer wound the influence of the *Poultry Item* by publishing in our reading columns matter that weakens the confidence of our readers in this publication's integrity. In statements over the advertiser's signature, he rules supreme. For all other matter published, the authors will be responsible and their names will, as usual, appear with the story."

"F. B. C."

Exhibit C.—An editorial from the November *Inland Poultry Journal:*

"We understand that the AMERICAN POULTRY JOURNAL has decided to discontinue all reading notices and devote the space formerly given to the breeders in illustrating the birds and buildings of the owners. We wonder if this system will prove satisfactory to the advertiser or the subscriber. Our opinion is that our readers want to know just what our road men find on their trips. They like to know what the other fellow is doing, how many birds he has, how his matings have turned out, and if he has gone forward with his strain, if he is standing still or if he is going backward. It has always been the aim of the *Inland Poultry Journal* to send out men who do know the quality of the birds of the several breeds and varieties, and then have them tell our readers, as near as they can, just how the birds look in the yards of the different breeders. No doubt, the advertiser receives some benefits from these reports, but we leave it to you if he is not entitled to it. On the other hand, the readers receive a direct benefit by learning from us at our expense what others are doing without having to go to the expense themselves of visiting the farms.

"In our October issue our Mr. Hallett told of his visit with John Yant, of Canton, Ohio. In that article he told you many things you did not know and many things that an illustration would not have told. He told you of the foundation of the Yant strain of Barred Rocks. He described the barring on the birds and told you the number of bars he counted on one feather of a Yant bird. Did that article interest you or would you rather see a few pictures of Mr. Yant's birds or houses? We venture the assertion that every reader of *The Inland* that is interested in Barred Rocks read and appreciated every line of that write-up—in fact, wanted more of it.

"Would a picture of the Buff Leghorns of F. S. Smith, of Hamilton, Ohio, have told you that he had more than 5,000 Single Comb Buff Leghorns of uniform shape and color; that he breeds his birds not on one farm, but on many farms? Would a picture of Fred Harrison's Red Farm at Menominee, Mich., have told you that he produced 500 exhibition pullets this season? Well, not quite. Would a picture of H. W. Halbach's

A. E. Martz & Son, Buff Orpington Specialists, Box A, Arcadia, Ind.

White Rock Farm at Waterford, Wis., have told you that he had produced this season the greatest breast shape on his males that he had ever produced? We hardly think so. Take it from every angle—the good of the advertiser, the good of the subscriber and the good of the business in general, *The Inland* is thoroughly convinced that it is best to stay by its present policy and try to give to our readers the real facts in regard to conditions just as Mr. Hallett and the rest of our staff find them. When we sneak up on the breeders in their own homes, without their knowledge of our coming, we generally find things just as the breeder finds them 365 days in the year, and we are in a position to tell our readers the very things they want to know about these plants. It costs no one but us, and so long as we pay the freight and give you all the facts as we see them, we feel that we are making of *The Inland* what we have always tried to make of it—a poultry newspaper."

It is not our intention to start controversy, but, as apparently "Exhibit C" has been quite liberally distributed among our patrons, we feel disposed to make a few remarks on this subject.

Look, with us, over the pages of Mr. Hewes' November *Inland*. If experience counts for anything in the publishing business, we find that close to 45 per cent of his reading matter reads like straight out and out "writeups," polished up to please and flatter advertisers. Of his broad column pages at least 7 out of the total 15 are writeups of plants. We would not call them newsy or instructive articles, but rather more like free advertising and "puffing" the stock to promote sales.

Now that isn't our idea of a "poultry newspaper," in so far as a monthly magazine can be a "newspaper." Giving the news is one thing, but puffs and taffy for everybody, presumably given to make the advertising "pull better," is quite another matter. Instead of padding a paper with "free reading notices" ad libitum, why not confess that the advertising space is not worth what is asked for it and sell it for less?

We cannot see by what line of reasoning it is necessary or desirable to give away several inches, or even whole pages, of reading notices with each advertisement in order to make the ad pull. We firmly believe that the advertising space in AMERICAN POULTRY JOURNAL is worth every dollar and cent we ask for it. We know that it pulls good business for advertisers and that it pays. Simply because someone else does it, we don't see why we should "give a full dinner set with every pound of tea." You wouldn't expect such tea to be good.

Several successful and prominent men in the poultry business have told us that they would be glad to see "free reading notices cut out." They do not consider that a long string of similar "puffs" written about the stock of plants of Tom Doe, Dick Roe and Harry Coe are of any real value to them or to the readers. One veteran breeder told us that he told the editor of a certain poultry paper that the editor was welcome to visit his plant, but he did not want any writeup, because anybody who bought enough advertising space could get one, and he did not care for that sort of cheap publicity. "What you get for nothing is worth nothing," said he.

Some time ago we knew of an investigation by the Postoffice Department. They called the attention of an editor of a poultry paper to the fact that in the current issue of his paper he had printed from several lines to several inches of free reading notices for each and every advertiser, apparently. The editor said: "If I missed giving a notice to anybody it was not intentional." Is that news? Do readers want that sort of stuff? Do advertisers really care for it and does it

REGALS at HAGERSTOWN

Crusader III, a Boston Winner

AFTER a series of consistent winnings, Regal White Wyandottes have ended the Fall season with a wonderful triumph at Hagerstown in the hands of my customer Mr. Elwood Taylor of Maryland. The following is Mr. Taylor's letter which I have permission to use:

Berwyn, Md., Nov. 9, 1914.

Am sure you will be pleased to learn of my big win at Hagerstown Fair. On 8 entries I won 1st Cock, 1st Old Pen, 1st Young Pen, 1st Pullet, 2d and 5th Hen. This win was in close competition; each class being filled. REGALS ALWAYS WIN. I remain Yours truly, ELWOOD TAYLOR.

JOHN S. MARTIN Box 51 PORT DOVER, CANADA

do them any real good? We think not.

To avoid any misunderstanding later on, we wish to say that it is the *free reading notices* that we intend to cut out of our journal beginning with the January, 1915, issue. We do not intend to sacrifice any real news matter that is of value to our readers. So far as it is practicable for any monthly magazine to print the news of the poultry world, we shall print it. We expect to visit a good many plants and we shall tell our readers what we see and learn during our visit. But we shan't print a lot of taffy about the winnings and the fine line of birds that are for sale. If any breeder has 5,000 birds, uniform in shape and color, ready to sell, he will tell you about it in his ad, not in the reading columns, and you will get the news of his show winnings in the show reports.

When we report a visit to a poultry plant, we shall endeavor to tell our readers what we believe they want to know most about that plant—how the breeder made his start; how he feeds, manages and houses his stock, and what we see and learn there that we believe will prove instructive and helpful to the majority of readers. In short, we desire and intend to give the reader the real benefit of our visit to the poultry plant and do not intend to act as a press agent for the boosting and sale of the stock and eggs of each and every breeder we visit. Such reports will undoubtedly help the plants reported, probably more than the fulsome writeups that all seem as much alike as peas in a pod, but our chief object in presenting such reports will be to instruct and benefit subscribers and readers and give them the opportunity of seeing the plants as we see them.

From correspondence received to date, we believe that readers and advertisers as a whole welcome the discontinuance of free reading notices and certainly we shall try to make good use of the columns that have heretofore been filled with fine type "free readers." Hereafter, if anyone wants a reading notice of that sort he can have it by paying for it by the line and having it labeled "adv."

Eggs for the British Army.

THE following item was clipped from the water front news in the *Boston Daily Globe* for November 6th:

"The biggest shipment of eggs ever sent from this country to England will go out today in the steamship Anglian of the Wilson & Furness-Leyland Line, Capt. Toozes, bound for London. Eight thousand cases, containing 2,880,000 eggs, valued at about $30,000, will be exported. They will make up part of the food supply of the British Army. The Anglian will be filled to capacity when she leaves Hoosac Docks at 11 a. m. today. She will carry 90,000 bushels of wheat, 1,200 tons of flour, 200 tons of provisions and a very large miscellaneous freight."

During the same week about 7,000 more cases of eggs were shipped from the Port of Boston. Shipments totaling 15,000 cases or 5,400,000 eggs the first week in November from one port is going some.

But we feel a bit sorry at that for Mr. Tommy Atkins, who is presumed to be the ultimate consumer in this case. At the time this big export shipment was made, real new laid eggs were selling at retail in Boston at 60 cents a dozen, and scarce at that. We can't help wondering what sort of eggs were shipped that were only valued at $3.75 a case, or 12½ cents a dozen, in early November. The report says that they are intended for food and that they came from the West in 23 refrigerator cars. We can understand how 12½ cents a dozen eggs, at this season, might make effective ammunition, but as food for the wounded, such eggs don't look good to us. Nevertheless we are glad that these cheap and ancient eggs have left the country. Hope they were not stamped "Laid in America."

Is There a Santa Claus?

VIRGINIA O. HANLON, 8 years old, in a letter to the editor of the *New York Sun*, asks the above question, saying that her friends say there is not.

And the editor, mighty man of invective and sarcasm, became "even as a little child," and wrote the following reply:

"Virginia: Your little friends are wrong. They have been affected by the skepticism of a skeptical age. They will not believe except they see.

"Yes, Virginia, there is a Santa Claus. He exists as certainly as love and generosity and devotion exist, and you know that they abound and give to your life its highest beauty and joy. Alas, how dreary would be the world if there were no Santa Claus! It would be as dreary as if there were no Virginias. There would be no childlike faith then, no poetry, no romance to make tolerable this

In selected breeders at $25, $35, $50, $75 and $100 a pen (four females and male). Choice show birds of better quality than ever ready to meet the keenest competition and win. Get in touch with me NOW for your December and January show birds. All show birds will be conditioned, washed and fitted for your show without extra charge. 60-page art catalog of America's Finest White Wyandottes free, send for it now. Breeding pens for 1915 mated January 1st. State wants plainly and address

Chas. V. Keeler, R. F. D. 11, Winamac, Ind.

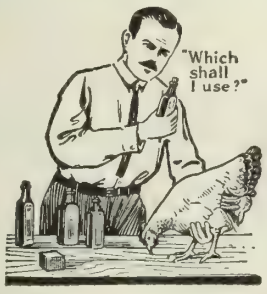
existence. We should have no enjoyment except in sense and sight. The eternal light with which childhood fills the world would be extinguished.

"You might get your papa to hire men to watch all the chimneys on Christmas eve to catch Santa Claus, but even if they did not see Santa Claus coming down, what would that prove? Nobody sees Santa Claus. The most real things in the world are those that neither children nor men see. Nobody can conceive or imagine all the wonders that are unseen and unseeable in this world. You may tear apart the baby's rattle and see what makes the noise inside, but there is a veil covering the unseen world which not the strongest that ever lived could ever tear apart. Only faith, fancy, poetry, love and romance can push aside that curtain and view and picture the supernal beauty and glory beyond. Is it all real? Ah, Virginia, in all this world there is nothing so real and abiding.

"No Santa Claus! Thank God, he lives and lives forever. A thousand years from now, Virginia—nay, ten times ten thousand years from now—he will continue to make glad the heart of childhood."

———o———

Increase Production.



BUILD up your business, increase your production of eggs, chickens and fowls. Poultry produce is looming up large as extremely important food to feed the people of this nation and of other nations. More and better food is needed and the demand for the best quality food eggs and best quality food poultry is steadily increasing. Do your share. Produce all you can produce well.

Dr. Edward T. Fairchild, president of the New Hampshire State College, is quoted as saying:

"Within the next 25 or 50 years the food supply in this country will have to be about doubled. It will not be increased so much by the addition of new land as by increased production from the land that we now have. This means that there is a great future ahead for the agricultural colleges all over the country and they will have to play a tremendous part in bringing about this greater added food production."

We don't doubt the truth of that statement. Food production must be increased. There is immediate need of increased production. Within the next five years the demand for food is likely to increase much more rapidly than the supply. Those who can produce an abundance of good foodstuffs to sell will undoubtedly make money. As our population increases, and as we come more and more to depend upon our home resources, we are bound to give more attention to intensive methods of production and to making two eggs and two chickens grow where only one grew before, and we will need to improve upon that if we can.

A comfortably full belly is conducive to optimism and prosperity. There is no more important work than that of producing good food wherewith to feed the people. The people must be fed and they are willing to pay well to be fed on good food. As we have said before, it is a good time to GET BUSY. Do your part in increasing the production of good poultry and eggs.

"Can't Afford a Doctor"

for a sick chicken, yet one sick chicken in a flock generally means more sick chickens soon,—their diseases being mostly contagious or caused by the same food, drink or housing.

Flock treatment is the modern method and Germozone the modern remedy. One need not buy one medicine for roup, another for canker, another for diarrhoea, and still another for sore head, or chicken pox, or inflamed skin when Germozone is the one remedy for inflammations or irritations of skin or mucous membrane, and that covers nine out of ten poultry and pet stock troubles.

The big point is to take early action. Germozone acts quick. It is no uncommon thing to cure canker or roup in one night, but the earlier the treatment, the quicker the recovery.

Best of all is the "twice a week" preventive treatment, a teaspoonful of Germozone to a quart of drinking water. It purifies the drinking water, from which source contagion is most frequent, and also has a beneficial action on mouth, throat, crop and bowels. It is a great bowel regulator for poultry, pigeons, birds, dogs and other pet or domestic stock.

Box 488, South Bend, Indiana

Free Reading Notices.

HAVE you ever seen a horse in an old-fashioned tread-mill, always on the go, yet going nowhere?

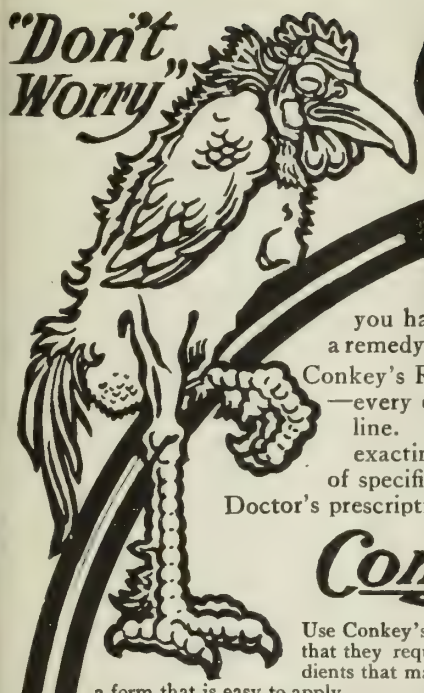
"Well, that horse reminds us of certain poultry papers. They are running the same gait today that they did ten years ago. They "forget" or do not know that this is the age of advancement—that people who read poultry journals select the "bell wether" and pass up the "sheep."

Two months ago we announced that with our coming January issue we would discontinue what is commonly called free reading notices.

The AMERICAN POULTRY JOURNAL caters to its readers, for after all, it is the readers who support the advertiser, therefore the readers' wishes comes first.

A two years' study proved that reading notices were read by "advertisers." The real dollar and cents subscriber, the one who wants to purchase something, wades through these readers like a real boy washes his face when compelled to.

The first poultry journal published ran free reading notices, that was 50 years ago. Surely the poultry industry itself has progressed—why then should the poultry journals be as "the man who stood still."



The November issue of the *Inland* asks. "Does a picture show that so and so has 500 prize winning cockerels?" No, the picture will not show all 500, but it will show a number of the fowls as they really are—not as a flowery pen pictures them. How often have you heard someone's praises sung, only to be disappointed when you saw their picture. Suppose someone wrote that they would give you a million dollars. You would, of course, be "worked up." But wouldn't you be more "worked up" if they were to send you a picture of the million, so that you would know what you were going to receive?

Which Do You Prefer?

THIRTY miles from Boston (Mass.) there is a village postmaster who keeps a grocery store. It used to be a store just like hundreds of other village post offices, but the postmaster has taken a new grip on his business and is adopting up-to-date business methods and keeps his store well stocked with fresh, bright, new goods of the best quality. He no longer talks about poor business. Recently he said: "The demand for good, real new laid eggs is surprising. Folks buy more eggs now than they did when the prices were lower, but they want *good new laid eggs.*" On November 11 he was paying nearby farmers 52 cents a dozen for newly laid eggs and he insisted that they "must be clean, good and new laid." He was selling at 55 cents a dozen, which was then the wholesale price for eggs of same quality in Boston.

Four miles away from this postoffice in two directions are two other village grocery stores. On the walls of each in an out-of-the-way place is a sign which reads: "Cold Storage Goods Sold Here." In the cellars of these stores one can find a quantity of egg cases containing "western case eggs" that the proprietors bought at from 12½ to 20 cents a dozen from a big packing house concern. On the counters up stairs, eggs out of these cases are displayed with the sign, "Fancy Selected Eggs, 40 cents a dozen." The eggs are brown but their age is doubt-

Get These Conkey Remedies NOW!

When disease develops in your flock you have no time to experiment—what you need is a remedy at hand that you can rely upon to do the work. Conkey's Remedies are not put out on a "hit-or-miss" basis—every one is thoroughly proven before it is added to the line. In our laboratories our research work is of the most exacting kind, for we "build" our Remedies for the treatment of specific diseases and they are as carefully compounded as a Doctor's prescription. This care means unexcelled protection for your flock.

Conkey's Roup Pills

Use Conkey's Roup Pills when your birds are so far advanced in the disease that they require individual treatment. They contain the same active ingredients that made Conkey's Roup Remedy world-famous, and you get them in a form that is easy to apply.

Conkey's Roup Pills are covered with a coating that rapidly dissolves and this assures the quick release of the remedy. When your birds are sick you can't afford to wait until the coating wears off. Keep a package in your **Conkey Corner**. Prices, 25c, 50c and $1.00.

Conkey's Roup Remedy—Powder, given in the drinking water, 25c, 50c and $1.00.

Conkey's CANKER SPECIAL

Conkey's Canker Special is a new product of the Conkey Laboratories and is, perhaps, the most important poultry-remedy discovery that has been made since Conkey's Roup Remedy was introduced twenty years ago.

When applied to the eyes, nostrils, mouth and throat of the birds it quickly allays the fever, kills the roots of the Canker, reduces the swelling, and brings the bird back to normal without a blemish. Also, use it for Canker in Pigeons, and at shows when your birds develop colds—it works like magic. Price, 50c.

Conkey's Poultry Tonic

Get the eggs now. Conkey's Poultry Tonic makes your hens happy and contented, well nourished and strong. It is free from filler, and contains only those tonics that have a beneficial, lasting effect upon the organs of the fowls. Read its contents on the **front** of the package.

Feed **Conkey's** to all your birds, young and old, all the time—it helps nature do its work. Packages, 25c, 50c and $1.00. Pails, $1.60 and $3.00.

CONKEY REMEDIES and TONICS are guaranteed to please you or your money will be promptly refunded. Get them of your local Seed, Feed, Hardware or Drug Store or write us.

Know How To Care for Your Poultry, Get This Book

Our new Poultry Book tells how to detect the presence of disease and what to do to overcome it. It should hang in your **Conkey Corner.** Send 10c in stamps for a copy and we will enclose our Cash Value Coupon, something new. Write today for the Book and learn how to laugh at poultry ills.

Be Ready for Emergencies with the following-

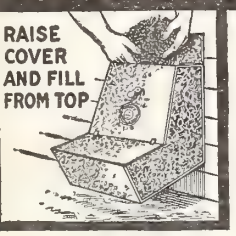
Conkey's Roup Remedy
Conkey's Cholera Remedy
Conkey's Bronchitis Remedy
Conkey's Sore-Head Remedy
Conkey's Poultry Worm Powder
Conkey's White Diarrhoea Remedy
Conkey's Lice Powder

and above all always have a can of CONKEY'S NOX-I-CIDE on the shelf—a powerful aid in keeping everything sweet and clean; kills lice, germs and odors.

The G. E. Conkey Company

1000 Conkey Bldg., Cleveland, Ohio, U. S. A.

MOE'S SELF LOCKING LEG BAND



Patented Feb. 10, 1903

A sealed band that requires no sealer. Locks simply by pushing it together and it can only be removed by destroying the band. Manufactured out of a bright nickel colored metal that will not rust or corrode. Every band has its own raised or embossed number.

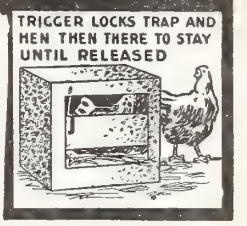
12 Bands 15 Cents. Postage paid. Liberal discount on quantities.

MOE'S NEVER CLOG AND WASTE PROOF HOPPER

Patent Pending

Large in capacity, small in price. Does away with all trouble of feed clogging no matter how coarse. The gradual enlargement of the base will force the feed downward. Rat proof and weather proof when closed. A trial will convince you that it is a hopper of the greatest merit. Manufactured of heavy galvanized iron in three sizes:

No. 35—12 quart capacity $ .75
" 36—18 " " 1.00
" 37—36 " " 1.50



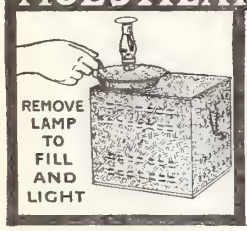
MOE'S NEVER FAIL TRAP NEST

Patent Pending

A solution of all trap nest troubles, for as the name implies it never fails. These traps are lice proof. But one bird can enter at a time. Fully sealed back and sides, but when the hen is trapped she gets plenty of air from above and beneath the trap. The trap is easily removed so that the nest can be used without same and as an ordinary nest. Does away with all trouble in setting up as they are set up and ready for use when shipped. Manufactured of heavy galvanized iron in two sizes:

No. 33—About one foot square, complete..... .....$ .75
No. 34—12 x 12 x 14½ in. for extra large birds, complete..... 1.00

MOE'S SANITARY POULTRY DRINKING FOUNTAIN



Patented July 11, 1911

Fills from the top. The most popular fountain on the market. The double wall keeps water cool in summer and retards freezing in winter. No valves to get out of order. As easily cleaned as an ordinary pail. The square drinking pan does away with all chances of spilling when hung up. Affords drinking accommodation for two pens at one time. Manufactured in three sizes:

No. 1—1 gallon capacity....$1.25
No. 2—2 " " 1.75
No. 4—4 " " 2.25

MOE'S HEATER FOR TOP FILL FOUNTAINS

Makes our top-fill fountains absolutely non-freezing no matter what the weather. Constructed with every precaution against danger of ignition. Simple and safe. So ventilated that the lamp will not blow out in the stormiest weather, but all the time supplying just sufficient heat to prevent the water from freezing. Manufactured of heavy galvanized iron with lamp complete in three sizes:

To fit our No. 1 fountains..$ .75
" " " " 2 " .. .85
" " " " 4 " .. 1.00

If not at your dealers any of the above sent direct on receipt of price. These are only a few of the good things in Moe's line of useful and sanitary poultry supplies. Write for complete catalogue.

Otis & Moe Manufacturing Co.
1111 West Washington Boulevard Chicago, Illinois, U. S. A.

ful, they were picked up on farms throughout the Southwest a long time ago. Some of them are very dirty. The store keepers say that "They are very good eggs and open up very well, but most of them will shake a little." Some of them will float if you put them in a pail of water.

Good, wholesome, clean, new laid eggs at 55 to 60 cents a dozen. Stale, soiled, "shaking," floating eggs at 40 cents a dozen.

Which do you prefer?

DR. WOODS' NOTES AND COMMENT.

Merry Christmas and a Happy New Year to everybody all the wide world 'round. Let us hope that this glad season may bring Peace and Good Will toward Men all over the world.

* * *

Cheer Up!

If at first you don't succeed,
Don't give up!
Discouragement you should not heed—
Where's your pluck?
Greet your troubles with a smile,
Have another try!
Life is really worth your while,
Laugh, don't cry.
Being glad will help you too,
Nothing matters much.
In this world you get your due,
Work for such.
All dark clouds have silver lining,
Darkest before light.
Don't waste time in much repining,
Make a fight!
You can find much cause for gladness,
If you really try.
Don't waste sunshine with sadness—
Success bye and bye!

* * *

Are you getting ready to make the most of the 1915 season? It is high time for a good start. Our mail indicates that there are big gains in the interest in Standard-bred poultry. There has been a good, brisk demand at good prices for eggs and table poultry. Good breeding stock is in demand and there should soon be a mighty good business doing in early eggs for hatching and in day-old chicks.

* * *

Press reports show that the beef and sheep and hog men have been experiencing serious difficulties with epidemic hoof and mouth disease and food animals from certain sections have been subjected to strict quarantine. We are sorry for them, of course, but "it's an ill wind that blows nobody good" and this should help to boost the demand for market poultry and eggs. With the scarcity of other animal foods and the probability of still greater scarcity soon, poultry and eggs are bound to assume very much greater importance in the national diet. We can assure those who may have looked upon chicken and eggs as luxuries, that good chicken and good eggs even at top market prices make very excellent staple food for the whole family and the cost is not excessive. When the poultry and eggs are home grown the cost is greatly reduced. Since early last spring we have averaged not less than three chickens weekly and not less than eight new laid eggs daily for a family of four and we expect to keep that pace for some time to come. We don't tire of them, either, and we have plenty of other meat foods to afford ample variety. If every family of two adults and two children would do likewise it would take a tremendous quantity of poultry

and eggs to supply their needs. Nowadays it is a pretty good plan to Boom and Consume home grown poultry and eggs. Are you doing your share?

* * *

Give your boys or girls a small portable poultry house and a pen of Standard-bred fowls for a Christmas present, to be "all their very own" to do as they like with. Children take readily to poultry keeping and they like to feel real ownership. Healthful interest in the care, management and breeding of a flock of thoroughbred poultry will prove a good thing for children and a good thing for parents. It helps to keep the youngsters around home and gives them a personal interest in the home place that is apart from any other home interest. Anything that will keep your youngsters around home, and keep them interested in doing something that they feel is "worth while," is a mighty good investment.

* * *

Ever since we moved to The Anchorage Farm our source of water supply has given us more or less trouble and expense. We tried a variety of temporary helps, but they were only temporary and did not get us anywhere. Our water supply comes from a live spring about 900 feet from the house, through 1¼-inch galvanized pipe. The spring was only two small tiles deep and would often fill up with quicksand. The tile were small in diameter and it was an uncomfortable, stand-on-your-head job to clean it out, which had to be done quite often. This fall was the dryest season of record for many years. Wells failed and went dry all about us, but our spring held out, though often very low and quickly pumped out. We decided that we would fix the thing right this time if we went broke doing it.

We had diggers put in a curbing and dig down about ten feet, following the spring. It proved a bigger job than we thought and took four men nearly three days to complete the job and put in new tile. Four big 36-inch tile, weighing more than half a ton each, were used. We went through clay below the sand at a depth of six feet and then got into coarse gravel, where the spring bubbled up in the center as big as two fists. The men at the pump estimated the flow at 2,000 gallons an hour and the water was icy cold. The finished well now is ten feet deep by three feet in diameter and at the dryest time of the dryest season there was 7½ feet of water in the well and the spring should overflow in high water season. At low water it syphons down to the house, 900 feet away, and only has to be lifted by pump from about floor level. The quality of the water is unequaled and it is much colder than before. The total cost of the well complete did not exceed $10 per foot of depth and it is cheap at the price. Now we are wondering why we didn't have it fixed right sooner instead of monkeying with it for nearly four years.

There are a lot of other things that need doing and we are getting some of them done slowly, so that we ought to have quite a well equipped place after a while. This beginning small and growing is a rather slow but very interesting job. Trimming the woodland has made a lot of work and furnished us with about two years' supply of fire wood and is not half done. If it were not for the pest of brown tail and gypsy moths we'd feel pretty good over the woodland proposition, but these "bugs" are a frightful nuisance in New England.

We are beginning to hear less nowa-

1,500 Chicks around one stove

Also small sizes stoves. No hovers to bother about. No gas, no fumes, no wicks, no smoke. All bother and worry gone: Losses reduced to a minimum.

At Last!

The perfect brooder stove. Based on a new principle. Solves all your brooding problems. Perfect ventilation. Even temperature. No chance for disease.

Simplex Brooder Stove

Here, at last, is the perfect brooder stove! A wonderful, new invention. The Simplex Brooder Stove solves all your brooding problems. Send the coupon below **today** for free catalog. This stove works on a new principle, costs only 1-5 as much and means 1-10 the work, 1-4 the operating expense of ordinary brooder systems. *One stove successfully broods 1,500 chicks.* Also small sizes. Self-regulating — holds an even temperature. Does away with all fuss and bother — eliminates all worry. Don't delay. Send the coupon, **today,** for free catalog and full particulars.

Thirty Days' Free Trial

Use this wonderful new Simplex Brooder Stove in your own brooder house 30 days absolutely free. Give the Simplex a thorough trial before you decide on your brooding system for this year. Try the stove under all conditions. Make any test you know of. Then at the end of 30 days, if you are not delighted send it back and we'll cheerfully refund your money. You alone are the judge. Send coupon for catalog.

Turns Chick Losses To Profits

This wonderful new brooder will raise 20 to 50 per cent more of your chicks than you have been able to raise by old-fashioned methods. No more deaths from white diarrhoea and poor ventilation. It turns the losses from dead chicks into **big profits** for you. The Simplex soon pays for itself by **extra** money it makes. This wonderful new stove will double your poultry profits in a year — and it costs only one-fifth as much as other brooding systems. Send the coupon **today.**

Saves Labor and Expense

The Simplex Brooder Stove means one-tenth as much work —costs one-fourth as much to operate as any other system. Does away with all fuss and bother. Simply constructed—easily installed and cared for. It is self-regulating—needs no watching—eliminates all worry. **Try it for 30 days free.**

Free Brooder Book

Send the Coupon Today!

Send the coupon today for valuable book that tells how to "Increase Your Profits by Decreasing Mortality"—**absolutely free.** It tells how to solve all your brooding problems. How to save the chicks that you have been content to lose every year through disease and faulty brooding—how to make twice as much money from your poultry. Tells how to eliminate all the work and worry of raising large broods of chicks. Complete instructions on the scientific building of a brooder house. Reliable information about fuel. Also catalogue and complete details of the wonderful Simplex Brooder Stove and our 30-day free trial offer. This valuable book **absolutely free.** You assume no obligations whatever. Read this book before you decide on next year's brooding system. **Send the coupon today.**

days about the glory to be won in war. There is not much glory in being put up to be shot at for 20 cents a day and your grub (which you may not get). If you fall, you get a shallow trench where you drop in a strange land. If you should survive, you may be able to make a living in your old age selling shoe strings and lead pencils on some street corner, while the fickle world gives the cold shoulder to the war worn old soldier. Better think about the Glories of Peace.

* * *

"Quill," in *The Feathered World*, London, England, says:

"The movement to help the Belgian poultry-keepers when the right moment arrives is splendid, and will, I feel sure, be amply responded to. But there's just one thought strikes me, and that is that it may be wise to reserve a certain portion of our possible gifts for yet another country. Apart from quarrelsome and aggressive war lords and other similar offenders, it is only fair to say there are some good fanciers in Germany, and by-and-by, when the various allies have commandeered cheap feeds all over the Fatherland and things have settled down again, a little help in that quarter may not come amiss. Not high-priced buyers as a rule, nevertheless, there are many English breeders who have done very well by sales to Germany, and we may think well to be generous and forgiving when sufficient punishment has been administered. I hear they're getting hungry over there, and probably most of the poultry will be devoured even before Mr. Atkins and his colleagues arrive on the scene, so we had better keep a few back in case they are needed."

War is a lot worse than Gen. Sherman said. Recently a naval commander was severely reprimanded for attempting to save his comrades on a stricken sister ship. He should have let them drown instead of risking his costly ship and armament. Men are the cheapest and most easily obtained things in war equipment, so the superior officers said. Now that the thin mask of civilization has been dropped, wonder how far the brutalizing process of reversion to savagery is to be carried and how long it will take to recover from it.

* * *

Evidently breed type has been neglected by breeders on the other side of the "herrin' pond," as well as here at home. We certainly do like to see birds that hold to the true shape of their respective breeds. If we are going to have all our breeds struck out with the same die, what's the use of having more than one breed? The following clipping from "Random Shafts" in *The Feathered World* (England), is to the point:

"It's astonishing how frequently one finds it necessary to keep on explaining what single and double mating means. So many seem to think single mating is simply putting together a typical pen of show birds. Two things are necessary—brains and a poultry run. The greatest advantage lies in the fact that there are so many people who won't patronize a breed where it is necessary to breed both ways; not only the small men who have not room for both, but many others who don't like or won't bother with two strains. Then on top of that here comes the suggestion that a silver 'Dotte cock would look far more handsome with a laced top, which would be one of the essentials for single mating. I repeat it only wants a moderate amount of brains; the necessary standard could easily be bred up to. One has only to read your American quotations to see how necessary it is to work in unison with our transatlantic cousins and to gather how quickly they would cotton to a single-mated type. Shape? You don't go far enough in my opinion. You should have said it has ceased to receive any consideration on this side. Single mating, with the consequent alteration in lacing, is not enough in itself. We must have therewith a return to true Wyandotte type if we are to breed true Wyandottes and cultivate transatlantic business. Take another variety, the whites; handsome and useful birds, no doubt. We see crowds of them all around and at the shows, but how many of them are anything approaching the shape of a Wyandotte?"

* * *

Things are never so bad but that they might be worse. A recent letter from a big firm of manufacturing chemists states that: "The European war has cut off the supply of practically all the ingredients that enter into several of our formulæ, but our supplies will carry us for two years from January 1, 1915, so that we shall be able to supply your wants without material advance in prices and without any sacrifice of quality." That is encouraging, and we have no doubt that when the brains of this country get well down to work adjusting and adapt-

BLUE ORPINGTONS :: SILVER CAMPINES

Though we are at war I have obtained a special permit from our privy council to export exhibition birds to America. I can therefore undertake to land in New York (alive) any orders entrusted to me. I have won more prizes with Blue Orpingtons this season, sometimes competing against the best Blacks, Buffs and Whites seen out, than almost all the Blue Orpington breeders put together. If you want to win at any show in Blues I can supply you. Every Blue Orpington I have shipped to America to win has done so. In Campines exported to America the wins were greater, as I shipped a greater number. Write me your requirements and size of competition, and I will quote you by return mail. Mention American Poultry Journal.

ing things to the uncommon present day conditions, that we shall find that this country has plenty of resources that have never been developed. The western hemisphere of the good old earth has a wealth of undeveloped natural resources that have never yet been tapped and now is a good time to begin to develop new sources of supply.

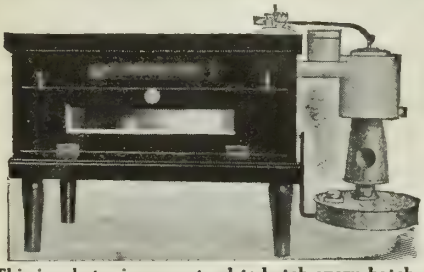
* * *

One of our editors, commenting on the general mixup in the old world and the involvement of Turkey and Greece and the probability of other nations getting into the war by Thanksgiving, finds one thing to be devoutly thankful for and says: "Thank God for the Atlantic Ocean." We sure have abundant reason to be thankful for the geographical location of the American continent and for our abundant and wonderful resources.

* * *

We feel very friendly toward T. E. Quisenberry, of the Missouri State Station, and several of his associates. We had a very pleasant visit at the station plant early last spring and found it well and practically equipped and doing some good work. But, after reading the article on "Colds, Roup and Catarrh," which was printed in most of the November poultry papers with Mr. Quisenberry's signature attached, and which was sent out as a press bulletin, we would respectfully suggest that some one put "the soft pedal" on some of the publicity work or "tie a can" to the press agent. We don't quite gather from the article in question who is responsible for the pernicious treatment of roup and catarrh that is recommended, but whoever is responsible should be sentenced to take the treatment himself and spend several days in "solitary" thereafter. Here is the treatment which Mr. Quisenberry's article recommends, quoted just as we found it in several of our exchanges (luckily some one in Chicago killed it before our printer got hold of the copy) and the advice contained therein is going to cause much needless suffering and wholesale cruelty to thousands of innocent poultry victims this winter. We quote:

"The doctoring of sick birds is tedious and, for the most part, discouraging business. Unless they are especially valuable, the axe is the best cure for all badly affected birds. After the nostrils have been thoroughly cleansed by pressing out all the mucous possible with the thumb and finger, it is a good idea to dip the head of the bird into a pan of warm water into which you have poured Zenoleum, Creolin, Cresol, or some other disinfectant. After the bird's head has dried, take an ordinary sewing machine oil can and inject a little of the following mixture into each nostril: 3 parts coal oil or kerosene; 1 part Zenoleum, Creolin or Cresol.



"Mix these thoroughly and shake well each time before using. Give this treatment at least once a day. If the eye is affected, remove all mucous or cankerous substance and drop a mixture of equal parts water and Zenoleum, Creolin or Cresol, or some such disinfectant into each eye. If a tumor has formed about the face beneath the skin, open it with a sharp knife, and allow it to bleed freely and press out all the substance which has collected and caused the tumor. Wash it with the disinfectant and water, and then fill the opening with powdered alum."

* * *

Friend Reader, whoever may be responsible for the advice in the above-quoted treatment for colds, we urge you *not* to try it. Such treatment is simply devilish cruelty and it will not help your birds. In the first place, the assumption that zenoleum, creolin and cresol are the same or similar and may be substituted one for the other is all wrong. The first two named are disinfectant preparations mixable with water to make a milky disinfectant solution and are presumably similar to other disinfectants known as saponified cresol. *Cresol* is a very different thing and is dangerous for such use as recommended in Mr. Quisenberry's article. Cresol, as commonly purchased, is a crude distillate obtained from coal tar, similar to and often sold as crude carbolic acid. It is not adapted for use on mucous membranes or in wounds. Its uses are the same as crude carbolic acid as a disinfectant for stables, poultry houses, toilets and cesspools and as a mite killer about the roosts or as an ingredient in making lice paints or in making saponified cresol disinfectants. It is good enough in its place, but for goodness sake don't use straight cresol, or a mixture of kerosene and cresol, for internal medication or as an application to the delicate and already irritated and inflamed mucous membranes of your bird's eyes, nose and throat. For colds and roup a cheap remedy for treating quickly a big flock can be found in a weak solution of one teaspoonful of creolin (or some other good saponified cresol) in two quarts of water and the same being used as a dip for dipping the bird's head with its mouth held open. This treatment is plenty harsh enough and undoubtedly unpleasant for the bird, but it is effective and there are no serious after effects and tedious treatment. A milder, more pleasant and just as effective remedy is to apply a little germifuge to the nostrils and cleft in roof of mouth. Kerosene is a powerful and dangerous irritant to mucous membrane. We advise you, Friend Reader, to look up your back numbers of A. P. J., particularly October and November, and read therein the admirable articles by J. H. Petherbridge, under the heading, "Poultryman's Practical Dis

A Standard 60-Egg Incubator, 50-Chick Simplex Feather Brooder

BOTH ONLY **$11.00**

This incubator is guaranteed to hatch every hatchable egg—and does it

"SHOW ME" are the words that express the sentiment of poultrymen when confronted with the statement that our SIMPLEX PERFECTION FEATHER BROODER will raise chicks better than the "OLD CLUCK" and with less trouble. We will "SHOW YOU." We will prove that SIMPLEX FEATHER BROODERS deliver the goods—not by printers' ink—but by raising nearly every chick which is put into the brooder.

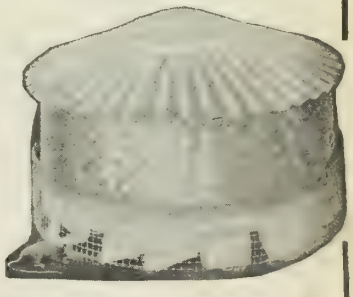
As a Special Inducement

We will send you this brooder and one of the best known and most successful incubators on the market for the exceedingly low price of $11.00 AND WE REFUND FREIGHT CHARGES. Investigate this offer—it's bonafide—the incubator is given you at absolute cost—you will be surprised to find out what machine it is—and will be only too glad to avail yourself of this opportunity to secure this incubator and a SIMPLEX PERFECTION FEATHER BROODER, BOTH FOR $11.00. Try them thirty days and if not satisfied your money will be promptly refunded. Our complete catalog of poultry supplies will give you full information. Send for it today.

SMOTHERED 63, THEN PURCHASED A FEATHER BROODER—READ RESULTS.

Simplex Supply House—I am greatly pleased with my feather brooder I received from you May 1st. I took off 96 little chicks from my incubator and saved every one of them in your brooder, but I smothered 63 before getting your brooder. I would not get along without it. Mrs. Lyman Buchanan, Kenney, Ill.

NOT ONE CHICK LOST.



Simplex Supply House—I think your feather brooder the best one I ever tried. I didn't lose a chick out of the lot. Shall certainly try some of your other appliances. Mrs. W. P. Williams, Irvine, Ky.

CHICKS NEVER DID SO WELL.

Simplex Supply House—I received two Simplex Perfection feather brooders and am well pleased with them. I have never had chickens to grow and do so well as this year. The Brooders are the best substitute I have ever used for an old hen. Mrs. Gallatin Hickman, Perry, Mo. R. R. 3.

TAKE TO IT AS THEY DO THE HEN.

Simplex Supply House—The Simplex Feather Brooder which I bought of you in the spring, has given perfect satisfaction. The chicks seem to take to it just as they would the hen. I am well pleased with it. H. Abraham, Silver City, N. Mex.

Simplex Supply House, Pontiax Bldg., Chicago, Illinois

pensatory.'' You will find therein valuable and sensible information to your profit, and in the two issues mentioned you will find ample information concerning kerosene and cresol as poultry remedies.

* * *

Rather than dope and injure your birds with powerful irritants recommended in carelessly prepared publicity articles, it would be much better for you to adopt expectant treatment and use no remedy at all. Simply put your bird into an open-front coop with a small run attached, supply plenty of good food, water, and let Nature do the rest. We have seen roup, catarrhal colds, swollen head and big eyes cured on numerous occasions without any treatment other than good feeding and isolation in fresh air quarters. It is bad enough to have to treat sick fowls, but surely there is no need to subject the poor, sick and helpless victims to the cruel and abusive treatment so commonly recommended off hand and so frequently used. If you can't doctor your sick fowls sanely, sensibly and without cruel abuse, then you had much better kill them and burn the bodies at the start. Fully one-half, or more, of the cases of ailing poultry that are brought to our attention are ones where the sick birds are suffering more because of the *treatment* they have been given than they are from the original disease.

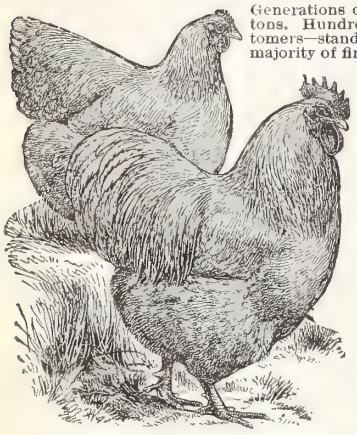
* * *

John A. Gough, in *American Fancier*, says about poultry housing: ''If you feel that the open-front house is not your ideal poultry house, use waterproof sheeting in place of glass and you will greatly lessen your chances of colds in your flock as well as roup.'' We believe that he makes a mistake in giving that advice. Waterproof sheeting or oiled muslin is a poor substitute for glass and collects much dust and dirt and soon becomes so dark that it shuts off the light. It shuts out the sunlight anyway and sunlight is very much to be desired in your poultry houses in winter. Sunlight and fresh air are both essential in keeping poultry healthy. If the waterproofed sheeting is advocated for ventilation purposes, it is about equal in value in that respect to a tight board wall. Where one desires to alternate ventilating screens or curtains with glass windows, don't use waterproof sheeting or oiled muslin; it won't give you any ventilation. If screens or curtains are wanted, make them of coarse woven cotton cloth or stout cheese cloth. If you use close woven goods it will shut out the air whenever it is wet and will soon fill up with dirt until it is almost air tight.

* * *

George H. Pollard, in *Poultry Herald*, says: ''Poultry will winter well in any kind of a shelter which keeps off the cold winds and provides a reasonably dry spot for roosting and exercise. As good results may be gained in a shack as in a palace.''

Better results usually in the shack, we think, if there is ample provision for a fresh air supply. A good poultry house need not cost over a dollar per head of fowl it will accommodate, first construction cost. We have seen plenty of expensive poultry houses that were anything but conducive to poultry health and good production.



* * *

Mr. Pollard also makes some remarks regarding fresh air methods that are to the point. We quote:

"Grown under fresh air methods, laying hens are healthy hens and hardy hens and any ordinary exposure to the elements will not result in wheezy throats and liquid nostrils. About the only thing that will upset them is fright, worry, or too little food of a suitable kind. If the fowls have been kept cooped in close houses and are unused to fresh air, an abrupt change to an open front house may result in slight colds which should soon disappear. More evil consequences are likely to follow a sudden change from an open house to one with little, or insufficient ventilation. In such cases serious disorders are quite sure to appear and colds and roup are not infrequent. What in well ventilated and open front houses are slight and unimportant ailments quickly grow to serious troubles where the conditions are bad, and almost always they are bad where the supply of fresh air is inadequate."

Possibly he may class us among the fresh air faddists, and we are perfectly willing to admit that we may be a bit of a crank on the subject, but, in any case, we take open-air sleeping quarters for ourselves as well as our fowls and it seems to agree with us and with the fowls. However that may be, we have not had any trouble with fowls, home-grown or purchased, resulting from moving them from closed quarters into open-front houses. They always take to the open quarters kindly and do well there. Moving birds from open-front

They've Always Won--They'll Win for You

Generations of winners are behind the Sunswick Exhibition Buff Orpingtons. Hundreds of cups, diplomas and medals won by ourselves and customers—stand as confirmation of their winning record. They've taken the majority of first prizes at the leading shows since 1907.

This season we have some

Grand Exhibition Stock

with which our customers can meet any required competition. They comprise some exceptional exhibition specimens—cocks, hens, cockerels and pullets, with the ancestry, color, form quality and vigor that mean sure success in the **show room.** We advise early reserve orders, for our stock has always been in great demand. Birds conditioned free of extra charge and delivered in fine exhibition form directly to the show room, if desired.

Sunswick Farm S. C. Buff Orpingtons

are not only **grand winning birds in the show room,** but are the real breed for flesh and eggs. Can't be beaten. They mature early—are of great size, beauty and stamina. Cockerels make fine juicy broilers, roasters and capons. Our large beautiful catalogue describing our exhibition and breeding stock sent free on request. Write us today. Send your order in early and get the pick.

The licensing of poultry judges by the A. P. A. still proves a fertile subject for controversy. We have no fault to find with granting licenses to qualified judges, but we do believe that there ought to be some other plan for determining the applicant's fitness than the slipshod methods now in use. The A. P. A. has abundant good material for a licensing board. Such a board ought to be made up of veteran poultry judges of recognized merit and might well hold regular sessions at the leading shows in this country where applicants for licenses could take an examination, including written and oral answers to questions based on the application of the Standard and also give a practical demonstration of ability to judge actual specimens. It ought not to be difficult to get a licensing board in each state or provincial branch of the association. A license granted for proved qualification to judge and apply the Standard would mean something.

Some readers want to know why we specified white wheat bran in the mash formula in the article on "How to Get a Good Yield of Winter Eggs," in the November number. There's a reason. The red bran we get in our locality is very bitter, smells bitter, is not readily eaten, seems to contain much indigestible fibre and is not infrequently voided in the droppings. We can buy a white northern bran that is in large soft flakes, sweet flavored, palatable and seemingly more digestible. The fowls like it very much and we give it the preference over red bran when we can get it. When we can't get the white bran, we use the best quality and biggest flaked red bran we can buy.

Friend Reader, we would be glad to have your report of your personal experiences with your poultry. We may not always be able to personally reply to your communication but a report of your work with your poultry will be welcome just the same. We get many more letters than we can possibly answer, but they are all welcome and often contain suggestions that help us to supply in the JOURNAL articles on subjects you wish to be informed about. We want you to feel that AMERICAN POULTRY JOURNAL is *your* poultry magazine and we will be glad to establish a Readers' Experience Department if you will keep us supplied with letters and photos for it. An exchange of experiences by readers should prove helpful and well worth while. Address AMERICAN POULTRY JOURNAL Experience Department, Lock Box 4, Silver Lake, Mass.

NOTHING MORE CONVINCING IN SELLING STOCK & EGGS THAN OUR
PHOTOGRAPHS OF POULTRY
THEY ARE USED LIKE STAMPS ON YOUR LETTERS, CARDS, MATING-LISTS OR ANYTHING YOU CHOOSE. ALSO MADE FROM ANY PHOTO OR PRINT—JUST THE THING YOU NEED
WE IMPROVE & RETOUCH PHOTOS, ADD BORDER, LETTERING, ETC DESIGN COVERS, ADVERTISMENTS, MAKE CUTS OF ANY SUBJECT AT LOWEST PRICES. PERFECT WORK; MONEY BACK IF NOT SATISFIED.

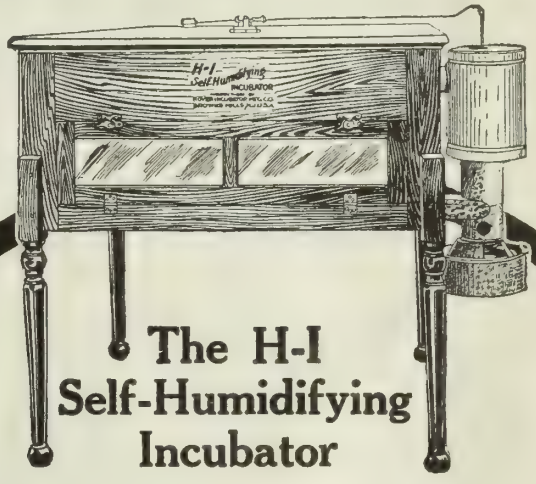
READERS' EXPERIENCE DEPARTMENT.

Conducted by Our Readers.

AN EXCHANGE of experiences practically conducted is one of the best means of distributing helpful information about poultry keeping. We offer our readers the opportunity to exchange practical experience notes in these columns. If you want it, this is your department, to be conducted by you, for the purpose of helping one another. If you have any plan or method that has helped you in your poultry work, here is the place to tell it and your opportunity. Nearly every poultryman has some device or method that saves labor, saves expense and helps toward success. Every poultryman has had experiences that have taught him something worth while. Every poultryman gets results or wants to know the reason why. Here's your chance to tell about your poultry work, to make AMERICAN POULTRY JOURNAL still more *your own* poultry magazine by sharing your experiences with others. Let us have your egg records, your reports of your work and such helpful information as you can give from actual, every day experience. Tell it briefly and truthfully. This department will be devoted to the exchange of experiences freely given and its continuance depends upon the amount of interest shown by our readers.



Write plainly on one side of the paper only and be sure to sign your full name and address. Your name need not be published if you advise us that you wish us to withhold it, but we must have your signature as a guarantee of the good faith of your communication.

Address all matter for this department to:

AMERICAN POULTRY JOURNAL Experience Department, Lock Box 4, Silver Lake, Mass.

Record of Year's Work.

The following record of a flock of

The H-I Self-Humidifying Incubator

The H-I Self-Humidifying Incubator represents the last word in incubator science. The woods, No. 1 Cypress, and Redwood, are selected for unusual resistance to heat and moisture. All incubator walls are double thick and carefully insulated between.

With the H-I Self-Humidifying Incubator, it is absolutely unnecessary to open the door of the incubator at any time during the hatch to give the required moisture. This one important humidifying feature greatly increases the percentage of the hatch. It solves at one stroke the one real problem in incubation — that of automatic moisture supply.

The H-I Self-Humidifying Incubator has every desirable feature contained in other first-class incubators, but in addition it contains the latest and most scientific features in incubation—the Self-Humidifying device. It cost you no more than for the ordinary kind.

100-egg, $22; 250-egg, $32; 400-egg, $38

Ask us for circular describing the H-I Self-Humidifying Incubator,

International Sanitary Mammoth Hover

is the one best hover for safely caring for large numbers of chicks with the least labor. A blue flame portable hover built for 500 to 600 chicks. Identical in principle with the 100-chick International Sanitary Hover, known throughout the world for its "warmest at the curtain" feature which insures happy, healthy chicks.

White Leghorn pullets may prove of interest to your readers. I started the record with 121 pullets, hatched March 29, 1913. They laid the first egg on October 4, 1913.

We use trapnests exclusively, and by their use keep weeding out the non-producers. True, a good poultryman can tell a laying hen from one that does not lay at all, but very few can tell without the aid of the trapnest, whether a hen is laying one egg a week or seven.

THE RECORD.

121 pullets laid 200 eggs from Oct. 4, 1913, to Dec. 1, 1913. (Culled out 8.)

113 pullets laid 429 eggs from Dec. 1, 1913 to Jan. 1, 1914. (Culled out 7.)

96 pullets laid 798 eggs from Jan. 1, 1914, to Feb. 1, 1914. (Culled out 4.)

92 pullets laid 1,069 eggs from Feb. 1 to March 1. (None culled out.)

92 pullets laid 1,747 eggs from March 1 to April 1. (None culled out.)

91 pullets laid 1,908 eggs from April 1 to May 1. (Lost one pullet.)

90 pullets laid 1,570 eggs from May 1 to June 1. (None culled out.)

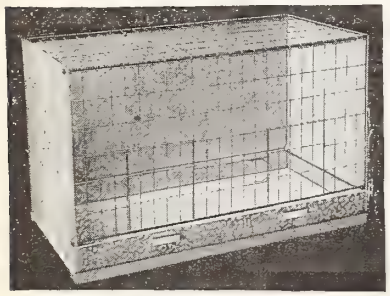
90 pullets laid 1,394 eggs from June 1 to July 1. (None culled out.)

90 pullets laid 1,374 eggs from July 1 to Aug. 1. (Culled out 8.)

83 pullets laid 1,025 eggs from Aug. 1 to Sept. 1. (Culled out 5.)

78 pullets laid 620 eggs from Sept. 1 to Oct. 1. (Culled out 2.)

76 pullets laid 429 eggs from Oct. 1 to Nov. 1. (None culled out.)



Which makes a total of 12,563 eggs, or 1,046.7 dozens, for which we received an average of thirty-five cents per dozen, making $366.34. On figuring up the cost of keep, I find it to be $1.32 per hen per year, or .11c per bird per month, and totaling $134.39, making a profit of $231.95 per year. Here is where the real argument in favor of the trapnest comes in. The non-producers are soon disposed of and the food cost of the flock is reduced accordingly. Without the aid of the trapnest we should have been unable to cull out the drones, except in a hit or miss way, when, in all probability, we should have disposed of some of our best layers.

Feeding the drones may seem to the unthinking poultryman a matter of small importance, but we find at the average cost of keep per bird that we have saved a little more than $25 on this flock of pullets by disposing of the drones. The net profit on this flock is a trifle over $2.50 per bird. Out of the 76 yearlings now on hand we have 18 that have laid over 200 eggs each, some of them in less than a year. The best layer in the flock, No. 59, started to lay Dec. 13, 1913, and has laid, up to Nov. 2, 1914, 241 eggs. The other 17 birds have laid from 202 eggs each up. The poorest in the flock, No. 3, has 168 eggs to her credit for her pullet year.

Many object to the use of the trapnest because of the necessity of an attendant, but in most cases there is some one at home who could attend to it, and with great advantage.

TIMELY CONSIDERATIONS.

BY EDWARD BROWN, F. L. S.

(From *The Feathered World*, England, Oct. 9, 1914.)

The Poultry Breeder's Problem.

THE position of breeders of poultry who depend to a large extent upon the sale, during the autumn of the year, of stock birds, and in the spring months of eggs for hatching and day-old chickens, is one that demands careful consideration, involving a heavy responsibility upon such as attempt to advise what ought to be done by them. I have had an opportunity of talking over this question with some of those engaged in the business, and it is evident that the position presents special difficulties. Fortunately, the panic period which follows the outbreak of war has passed, and saner views prevail. At the same time it would be unwise to ignore facts as they are, and that some, at least, of those who would ordinarily have purchased stock birds in the immediate future are indisposed or unable to do so. The point for consideration is whether others will take their place.

Those who may be termed breeders of utility stock have a second string to their bow which should be of very great service. Many of the birds which would otherwise have been sold can be kept profitably, say, for egg production, and, thus contribute to meet the great shortage which has to be faced by reason of the stoppage of many of our foreign imports. It would be wise, therefore, to retain, so far as the capacities of the land and equipment permit, a goodly proportion of these birds, more especially the pullets, which can be used in this way, and which will come in and probably be in demand for breeding stock a year hence.

The chief factor in many cases is, however, financial. Some of the larger breeders can withstand the strain, in that they have money reserves enabling them to carry over and wait for future sales. In the case of the multitudes of

smaller breeders, whether the poultry provide merely a part of the income or forms the main source, it is not so simple. The question is, can these find outlets for their stock at more than the killing value? What must be remembered is that in the hands of these breeders are scores of thousands of fowls and other poultry which are valuable in the extreme as breeding stock, and that at the same time the need for extension of poultry-keeping with a view to increased production was never so great as now. It would be nationally disastrous if these birds were killed and eaten for the sake of their flesh.

In consequence of the position referred to above, I am endeavoring to see whether some steps cannot be taken which would at once preserve the great mass of young stock poultry, securing their distribution to farmers and others, and also help to tide over the time of difficulty a large number of breeders who in the past have rendered important service to the poultry industry of this country. It is satisfactory to be able to say that the efforts of the Board of Agriculture and the press have already made themselves felt in the direction of inducing many to commence to keep fowls that have not hitherto done so, and it is to be hoped that by the distribution of leaflets, issued by the board to meet the present position of affairs, and the publicity given in the newspapers, farmers will realize the importance of extended operations.

I am not without hope, therefore, that much more will be done in this way, and would urge that all who have any influence will do their share. Judicious distribution of the leaflets referred to, which will be supplied if application is made to the secretary of the Board of Agriculture and Fisheries, 4 Whitehall place, London, S. W., free of cost, would do much to creat a demand for breeding stock. It is not too much to say that if farmers and others would rise to their opportunities the whole of the breeding stock which is for disposal could be readily absorbed, and form a basis for a vast improvement and increase of egg and poultry production in this country.

To summarize the position it is submitted that:

(1) All who are mainly concerned in production—that is, in supplying eggs or fowls for market—should retain as many pullets as they possibly can in this way. Foodstuffs are by no means so dear as had been anticipated, and prices of eggs, at any rate, are likely to leave a considerable margin of profit. In view of the importance of the food supply, I have no hesitation in making the above suggestion; and

(2) With respect to poultry breeders, it is not so easy to advise. What can be safely urged, however, is that they should continue to act as in previous years, and take the usual steps for securing a demand for their stock. "Wait and see" is the safe policy. The nation has to be fed, and in so far as poultry are concerned there must be a great development of the industry within the confines of the United Kingdom.

WAR AND THE POULTRY INDUSTRY.

HEREWITH is an optimistic editorial from *The Australian Hen and Kennel Gazette* that some of our own poultrykeepers may profit by reading. It is a good time to boost home business in poultry and eggs as well as along other lines:

"There is an old proverb which says, 'It's an ill wind that blows nobody good.' The poultry farmers of Australia will be realizing the truth of this saying for the next two or three years. The knowing ones are already buying extra incubators and mating up more stock to produce poultry for table purposes in the hope that high prices will rule in the near future. Those that have not already decided to do this should not delay a day before giving this their serious business consideration. The principal poultry producing countries of the world are now at war, and the production of poultry and eggs in these countries must suffer severely for at least two seasons. France, Russia, and Belgium are great poultry raising countries, and each contribute largely to the English market. The value of poultry products sent to England by these countries yearly runs into millions sterling.

"During the period of war all the available stock will be used up for food purposes, and very little hatching will be done, and next year these countries will be importing from Italy, Denmark, and the surrounding countries. England must

Doctor of Veterinary Science
Doctor of Medicine

Dr. Hess Poultry Pan-a-ce-a

will make your poultry healthy, tone up the dormant egg organs and make your hens lay regularly that I have authorized my dealer in your town to supply you with enough for your flock and if my Pan-a-ce-a doesn't do as I claim, return the empty packages and get your money back. Buy on that guarantee—you can't possibly lose.

1½ lbs. 25c; 5 lbs. 60c; 28-lb. pail, $2.50 (except in Canada and the far West). My Pan-a-ce-a is never peddled—it is sold only by reputable dealers, whom you know. Write for my free poultry book.

DR. HESS & CLARK
Ashland, Ohio

depend upon Australia for her imports in this direction. America has barely enough for her own use at the present time. Canadian exports of poultry are falling off yearly, and last year she had very little to spare. South Africa cannot supply her local demand, therefore Australia and New Zealand should be exporting eggs and poultry for the next two years at least to England at a price that should allow a fair margin of profit to the raisers. In the event of an early termination of the war the shortage will be severely felt, and if we do not export eggs and poultry, we shall be getting high prices here for the products. The price of meat will be so high owing to the amount that is bound to be exported next year, or even in a few months' time, that the price of eggs and poultry here will be higher than ever before. Foodstuffs will be high certainly, but pollard and bran should not rise much higher than at present. If we have a good wheat harvest the mills will have to get busy here, grinding flour and exporting same, and all mill offal should be reasonable. The price of maize will not be altered to a great extent, and oats can be fed more than is at present the case to counteract the higher price of wheat that we may expect. Our advice to the poultry man is to hang on to the stock, and hatch all that is possible, both for table and egg production purposes. Australia will benefit by the present great struggle, and the poultry farmer will get his share of the spoils of war."

WAR TIME NOTES ON POULTRY FEEDING

(From Special Leaflet No. 2, Board of Agriculture and Fisheries, London, England. September, 1914.)

THERE is always a danger at a time like the present, when poultry feeding stuffs are in greater demand for other purposes, and are consequently high in price, that many poultry-keepers may be disposed to decrease the size of their flocks and restrict their operations in this direction. **Such action would be against the best interests of both the individual and the nation,** since the greater the amount of human food produced in this country the stronger will be our position.

By making use of coarser foods than are usually employed the cost of feeding can be considerably reduced, whereas the yield need not fall off to any appreciable extent.

At the present time of year, with the hay and corn harvests over, there is no reason why on farms all poultry should not be kept out on the land. Under such conditions the birds will be able to forage for a very large amount of the necessary food, food that would otherwise be wasted. With all poultry-keepers the first consideration should be to distribute the birds over the land as far as possible. This can only be done as a general rule on medium-sized holdings and farms; allotment holders and backyard poultry-keepers are handicapped in this direction. Those who cultivate only a limited area of ground should make up for this by growing as much food for their fowls as possible.

Of the usual feeding stuffs, a number are now high in price, and until the demand in other directions decreases they may have to be omitted from the list of poultry foods, or be used only to a limited extent.

For many years wheat and its products have formed the principal basis of feeding, but for some time to come it will be necessary to curtail the use of these foods. Even foods not required for human consumption, such as bran and middlings or toppings, may be out of the reach of many poultry-keepers. To a lesser extent they may also have to dispense with oats and barley.

There is a large quantity of maize on the market. Though this is not an ideal

poultry food, it will have to be used in larger proportions than heretofore. A number of smaller grains, such as dari, Manchurian millet, kaffir corn, buckwheat and rice have not been seriously affected in price, and all are eminently suitable for poultry feeding.

The soft mash is a necessary part of the diet, and there is considerable difficulty in making up a mixture without barley meal, middlings or bran, since these are usually the chief ingredients. In place of these foods, however, a larger quantity of vegetables can be given, together with steamed hay and clover hay chaff. It is in this direction that crops grown by the small occupier can be utilized. Lucerne, cabbages, turnip tops, kale, roots of every kind, with the exception of potatoes, can all be turned to good account. The last named, if available, must be cooked. Green food can be fed either raw or cooked, and in the circumstances about one-half should be given in each form. If the supply of garden produce is limited such natural crops as nettles and grass may be substituted. When these are used they should be steamed for about half an hour and added to the soft mash.

Other substances that can be added

Unretouched photo of Barred Plymouth Rock pullet, which clearly shows the quality of stock produced by S. N. Tremper, Sandwich, Ill.

to the ration are brewers' grains, malt combs, spent hops, and yeast. The two first may be given as one-third of the soft mash, the last mentioned as one-fifth. These substances are bulky, and therefore rather more concentrated foods must be mixed with them. For the soft mash soaked whole grains may be added, and a small quantity of middlings should be used to bind the whole together into a crumbly state.

Silage is not often used for feeding poultry, but it has been employed with excellent results and is worth the attention of large poultry farmers. In feeding silage to poultry it has been found best to add 25 per cent of whole grains. For this purpose any of the grain foods mentioned above may be used. Silage can be fed in place of the ordinary soft mash, with some middlings added to make it crumbly.

Animal food is required by the birds, and there is no better or cheaper way to feed this substance than in the form of soured skim milk or butter milk. Whenever these can be obtained they should be fed largely. They may preferably be mixed with the mash or may be given in a liquid state in drinking fountains. In place of these, refuse from slaughter houses may also be employed, the blood and intestines being the most valuable.

Household scraps can be used successfully by adding them to the soft mash, but it must be remembered that they are generally composed of fattening substances. The supply is more or less limited, and therefore endeavors should be made to procure a supply from hotels, institutions, etc. They can usually be obtained for a nominal sum.

Since ordinary meals must be largely dispensed with, the ration will be on the bulky side, and hence special precautions should be taken to overcome any bad effects. Exercise is essential, and is best ensured by burying corn or seed in the litter of the house, thus inducing the birds to scratch for it. The aim should be to keep the fowls actively hungry all day, giving them the largest meal about an hour before they go to roost. By adopting a plan of this kind every ounce of food consumed will be utilized, and there will be no waste due to the birds storing up an excess of fat.

Feeding poultry will be rather more expensive than has been the case during recent years, and therefore great care

The Wing

Upright Pianos, Player-Pianos and Grands

One of Our 38 Styles

The Wing

For 46 Years a Standard Piano

Rock-Bottom!

Yes, Rock-Bottom Prices, and on a Piano of the **highest** Quality

The Wing Piano here illustrated is shown in one of our most popular cases. We offer the greatest variety of styles and (we think) the most beautiful cases in the world. We have just added a number of the finest, most beautiful, up-to-date styles and new designs, plain, colonial, mission and other designs, as well as more elaborate patterns.

The Improved new style Wing Piano in particular will prove a superb addition to any home, for it has a magnificent tone quality —well you must hear it! And we have a splendid line of newly designed, up-to-date, mahogany, French walnut, oak and other up-to-date cases. In fact, we offer the greatest variety of styles of **any manufacturer in the world.**

Thousands praise the Wing Piano to the highest degree; but there are, of course, dealers who make $100 to $200, **or much more,** on every sale of a piano; and music teachers (whom you would least suspect) secretly accepting commissions from the dealer. These people naturally "knock."

But here is our answer: The Wing is sent out on approval, returnable at our expense. When our piano must do its talking all alone while glib talking salesmen stand around "boosting" some other make—even then the Wing piano **nearly always** stays in the home while the dealer's is returned.

Remember, the Wing is the only piano sold direct FROM FACTORY which shows your friends you paid the price for QUALITY.

Don't fail to investigate our great offer.

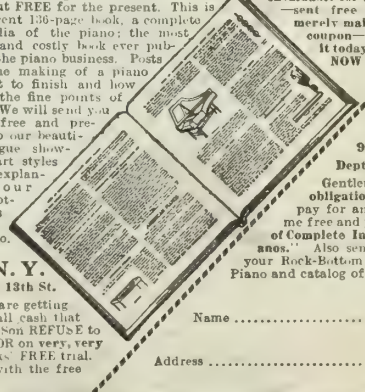
$150 to $250 Saved

And on a piano of the highest quality. Catalog FREE. **The Wing** **The only high quality piano sold direct at wholesale price**

Never before has any piano manufacturer ever dared to make such an offer. The greatest piano offer ever made—rock-bottom prices—no money down—easy payments if you do not wish to pay cash—absolutely free trial—a four weeks' free trial in your own home.

Let Us Quote You

the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer. You will be amazed. We will positively save you from $150 to $250 on the purchase of a piano of highest quality and recognized merit. Your choice of a piano shipped on approval, **all freight prepaid,** no money down—absolutely free trial—a 4 weeks' free trial. **Remember, all freight charges are paid in advance by us, no matter whether you keep the piano or not.**



Every Discount Goes Direct To You

When you buy a Wing Piano you pay no salesmen's, dealers' or middlemen's profits. You pay no commissions to music teachers and supposedly disinterested friends. Remember, we guarantee the Wing for 40 years. If you write at once you may have the Wing equipped with our wonderful instrumental accompaniments **without extra charge,** giving the effects of the guitar, harp, zither, banjo and mandolin.

SEND COUPON (Or Postal) NOW

for "The Book of Complete Information About Pianos"

should be taken to ensure that nothing is wasted. Food given should be supplemental to that which fowls can obtain by foraging.

All mashes should be fed in troughs, and only sufficient be given to satisfy the birds. Grain, except when buried in the litter, should be given in the same way. All foods should be stored in rat-and-mouse-proof bins or boxes, since these vermin cause great loss, not only consuming large quantities but spoiling a great deal more than they eat.

It is not possible to make any radical changes in the feeding of chickens, but a larger amount of green food may be employed, and the young birds should be given as much liberty as possible. Arable land is rather better for this purpose than pasture, since it usually provides much more natural food, which is excellent for the chickens and reduces the cost of feeding very considerably.

BLACKHEAD, ITS CAUSE AND PREVENTION.

Food Nourishes or Poisons, According to the Condition and Length of Time It Remains in the Intestines—Food Decay Is as Dangerous in the Intestines as Food Decayed Before Eating.

BY MRS. D. A. FARWELL, HOUGHTON, N. Y.

STATISTICS tell us that throughout this great country of ours there is but one turkey produced for each fifteen inhabitants. It is not from lack of demand that such shortage exists. Neither is it from lack of profit derived from raising this fowl. The scarcity of turkeys is due to the fact that their nature is so little understood that most people make a failure of the business when it comes to raising them and give it up after a year or two of unsuccessful attempts.

Selection of the breeders may seem to some a matter of small importance. Yet no one, on taking thought, will fail to see that this is one of the most important matters relative to any kind of reproduction.

Blackhead (or entero-hepatitis) is usually brought about by weak breeding stock or careless management. None of our domestic poultry decreases in size and vitality to the extent that the turkey does under careless management. Therefore, the greatest care must be exercised in the selection of the breeding stock. If a turkey has ever been ailing and an apparent cure has been brought about, such a bird should never be used or sold as a breeder, as disease is sure to assert itself sooner or later, usually after being transmitted to the offspring, and making its presence known through several generations.

Blackhead is a liver disease which affects turkeys in many different forms, but it is possible to breed turkeys free from this disease. For more than fifteen years I have been breeding turkeys and by care in handling have entirely wiped the disease out of my flocks, though I have yet to find a cure. Prevention is the only reliable remedy to date.

Food nourishes or poisons, according to the condition and length of time it remains in the bowels. If the digestive organs are overcrowded, or overloaded and unable to perform their functions properly, part of this food decays before it can be digested and is as dangerous to health as food decayed before eaten. The system becomes clogged with

the resulting impurities which are carried by the blood circulation to various parts of the body. The liver acts as a filter, and it is here the impurities and germs find a lodging place for speedy development. A certain portion of the poisonous matter is carried to other organs and in some cases the heart and lungs are involved. One lung will frequently be found entirely diseased and sometimes the heart floating in water in its sack.

I find there are more complaints in early autumn and spring than at any other time of the year. So we must take into consideration that the young turkeys, as a rule, have been fed by Mother Nature through the summer. Such food as they gather on the range is usually easy of digestion. Examine the gizzard of a young range turkey and it will be found as soft as that of a water fowl. The food for these green soft turkeys should be of a laxative, easily digestible nature—and fed sparingly. On range they do not overfeed. These facts are as important in the feeding of young turkeys as the rules for feeding infants. Take away modified milk from a babe and give it beefsteak and soggy biscuit, and with what result?

All grain given turkeys should be at least one year old, and absolutely free from mould. Oats should be fed in many different forms. I consider oats one of the best foods. Oats sprouts fed in late fall and winter are excellent. A variety is advised where possible. I do not feed corn to turkeys in any form, as it is subject to mould and green heart and I have been very successful raising turkeys since cutting out its use. It is not easy of digestion, at least where turkeys are concerned. I have slaughtered turkeys forty-eight hours after they were fed corn and found the grains still packed in the crop and gizzard.

My experience has taught me that a turkey should not be considered a walking apothecary shop and I have consequently long ago given up doping and trying to cure half dead birds. I kill every puny, ill looking subject immediately and burn the carcass. If any disease should break out in a flock, the weaker ones would be fit subjects to spread it, as disease finds all such easy prey, thus endangering good specimens. Most people are given to too much doping with themselves as well as their flocks.

A very grave danger lies in feeding heavy, undigestible, half mouldy food. Only the best bright, old, or seasoned grain should be fed; fresh greens, as picked up on range, and the bugs and worms which they will help themselves to. The birds must be kept free from lice, as anything that weakens a turkey is disastrous and must not be tolerated by the owner, if desirous of success.

I am frequently asked, which is the best breed of turkeys. The turkey is like any other fowl in that respect—there is no best, only as they please each individual's particular fancy. Once found, the breed best liked and that does the best for us, we should stick to it, as nothing is gained by changing.

In introducing new blood, care should be used in getting stock from localities where the climatic conditions are the same or nearly so as where they are going. It is a risk to attempt transplanting turkeys from the Southwest to the Northeast or any decided change in climate.

A great wrong done the buying public is that of sending out as breeders birds that are related. The result is bound to be disastrous. We should endeavor to cultivate a little honesty as well as the almighty dollar, and not be the cause of another's failure to raise turkeys.

There is no reason why good flocks of turkeys cannot be raised on the average farm if the breeders are non-related, care is exercised in feeding, and the birds are kept free from lice. Under such management there should be no bowel trouble or other ailment of any description. I have successfully raised eight hundred turkeys the past season by this method. As the unequaled American table bird, let us increase the present inadequate supply of turkeys.

ORPINGTONS BUFF BLACK

Closing out balance of my show stock. Cocks, $5, $8, $10 each. Cockerels, same. Hens and pullets, $1.50 to $5 each. S. C. W. LEGHORNS—D. W. Young strain long back cockerels, pullets, same.

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Windows in Monitor-Top of Open-Front House.

Q. I built a Woods' semi-monitor top open-front poultry house from plans published several years ago. We are having some trouble with the windows in the monitor top. They are hinged at the top to swing open into the house and are cased on the outside with one by two inch boards. During a rain the water beats in badly, although they fit well. We are much pleased with the house and if this defect can be remedied believe it will prove to be a very good house for this climate.

Holdredge, Neb. Mrs. J. H. L.

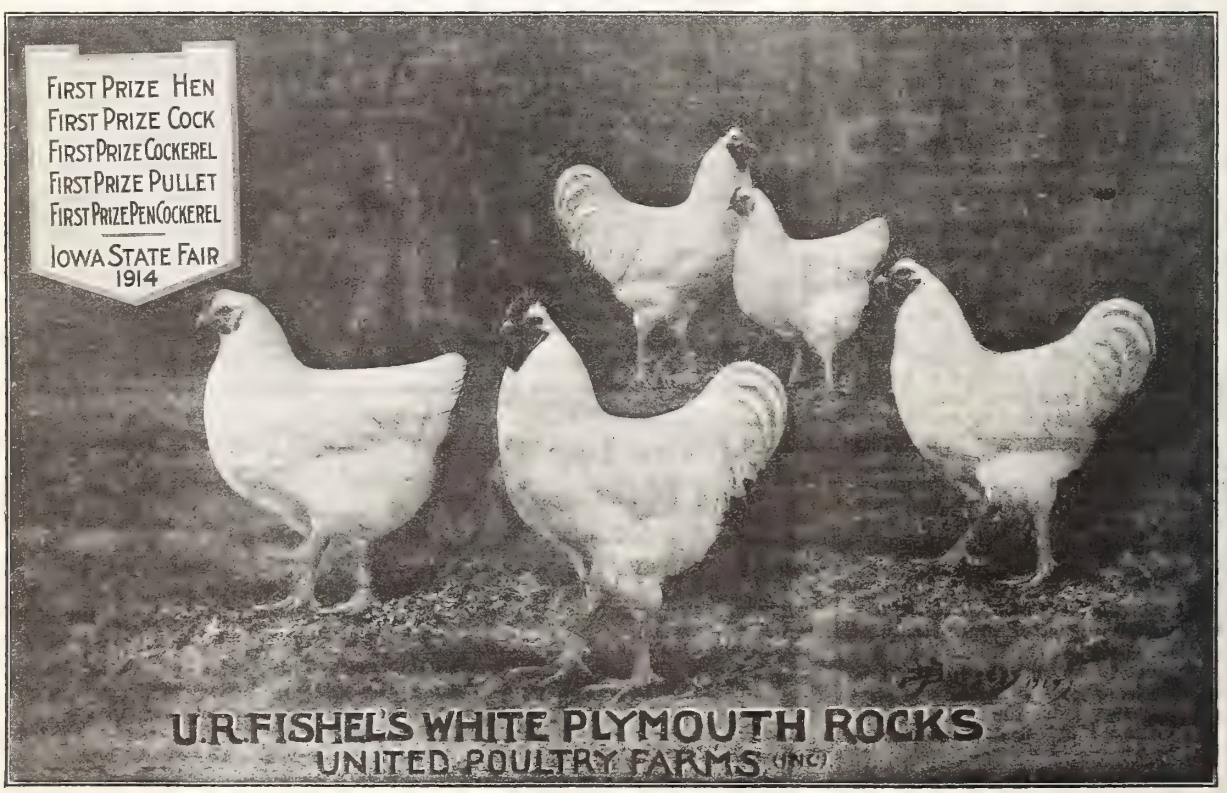
A. Fault is in the way the windows are put in. We do not recommend windows that open into the house. Put a good casing on the outside and hinge windows on outside at the top, so that windows will swing out away from the house like an awning. This will prevent storm beating in and in warm weather the windows can be left open without rain driving into the house. We either bolt windows on outside or put them on outside hinged at the top to open out. The hinged window is the most convenient and it can be made storm tight without much trouble.

Heavy Moult of Pullets.

Q. I bought 100-day-old chicks, White Plymouth Rocks, the 25th of last June. For some reason 33 of them died soon after arrival, it was very hot at the time and I thought the chicks were overheated on the way. Those that lived did fine. I never had any chicks that grew as well and they are beauties. They are now (Oct. 21st) shedding their feathers as though they were moulting. Every morning the floor under the roosts is white with feathers. What is the matter? What can I do to stop it? I want to make them lay some this winter. O. J. S.

Jamestown, N. Y.

A. There is nothing the matter; your birds are having an unusually heavy moult, that's all. The maturing young birds always moult their chicken feathers, but they do not always have so heavy and thorough a moult as has been the case with many flocks this season. Sometimes close housing and heavy feeding on a rich nitrogenous ration, after birds have been running all summer on open range, results in a heavy moult of the young stock. This season we believe that the unusual fall weather conditions were largely responsible for the heavy moult of young stock. Our young birds and fowls all had a very heavy moult this fall, some of the old birds were quite naked the last of October. There is only one thing to do and that is to keep the birds well fed on a variety of wholesome food, give plenty of fresh greens and good care. Ours have moulted out finely and were getting nicely down to business again in November and shelling out the eggs. Some of the pullets moulted as heavily as old hens. A few early pullets during the unusually mild weather of early November stole nests in the pine woods and became broody. The early part of November with us was like early summer, while in September and early October we had some sharp frosts, a few freezes in which the ground froze and some quite winter-like weather. Such unusual climatic conditions call for vigilance and good care of the flocks.



Scratch Feed.

Q. (1) How would you compound a scratch feed, to get the maximum size of eggs, from the following grains obtainable here:

Wheat, Early Barr	$3.00	per cwt.
Red Wheat	3.75	" "
Oats	3.00	" "
White Whole Corn	3.00	" "
Cracked Corn (not always obtainable)	3.15	" "
Milo Maize	2.85	" "
Kafir Corn	3.00	" "

I am inclined to believe that milo maize and kafir corn are not essential to the best scratch feeds; do you agree with me?

A. (1) We are not familiar with the variety of early wheat you name, at least not under that name. All grains vary a good deal with the season and with the *soil* (particularly) in which they are grown. Durum or macaroni wheat is one of the very best wheats for poultry

Made from retouched photos.

feeding. Where cost is about the same we prefer hard wheats to the softer varieties. The essential thing in any feeding grain is that it shall be sound, sweet and free from mustiness. There is a good deal of musty wheat now in our market. Just now we are getting a very good white wheat (rather full grained and soft) and a very good red wheat (fairly hard) at $2.25 per cwt.

For the scratch feed would, in your climate and with your high prices, use equal parts by weight of corn, wheat and oats for the scratch feed. It is not necessary to use cracked corn. At prices you quote would omit the milo maize and kafir corn. Do not consider them essential.

Q. (2) What type and dimensions of house for 100 layers would you build in a hot climate like this, where a cool house is the greatest consideration. The temperature seldom goes below freezing on a dozen nights in winter, but gets from 95 to 105 degrees in summer for three or four months. Would not want it so high as to make it cold and drafty on cold, windy nights in fall, and do not want to make it unduly expensive. Have considered the semi-monitor top house and a house 16x24 with two pitch sides of roof unequal. Chickens can run out about 364 days in the year.

Miami, Arizona. E. G. D.

A. The semi-monitor house without windows would make a cool house and not expensive. A hip-roof house with short reach of roof toward a high open front would make a comfortable house. A simple shed building with front and one side open (sides toward the prevailing cold winds closed) would serve you well. House need not be shingled or papered except on roof. All you need is a comfortable shelter for roosting and laying quarters. If a semi-monitor house would make it 20x20 ft. Other types, 16x24 ft. would serve.

Cut Green Bones and Beef Scrap.

Q. Will you please give the relative values of green bone (we grind the bones ourselves) at 50 cents a hundred and beef scrap at $3.25 or $3.50 per hundred, for egg production.

Fountain City, Tenn. J. S. S.

A. If you can get good, fresh, sweet bones from healthy animals at 50 cents a hundred pounds it is about equal to buying first quality beef scrap at $1.50 per hundred. The chief difficulty in feeding green cut bone is in getting a dependable supply and in feeding it out before it heats or spoils. There is always more or less danger of introducing disease into your flock by feeding green bone. Care must be taken to avoid feeding it too heavily and to avoid feeding spoiled or heated cut bone. At price you name, if good sweet beef and mutton bones are used, fresh ground as needed for feeding, it is a good cheap meat food. Don't feed green cut bone from diseased animals. Don't feed enough of it to keep the birds' bowels loose and watery.

Broken Macaroni.

Q. I recently sent to an advertiser of "broken cones and cracker crumbs for poultry" and received a sample of broken macaroni, quoted at $1.25 per hundred pounds. Is this macaroni good for chickens and would it pay to feed it?

South Bend, Ind. A. R.

A. We have never used it but believe it would prove a good food. Cracker crumbs are excellent. Broken macaroni at price quoted should make a good cheap food to take the place of part of the more expensive grain. Would try feeding it broken up to cracked corn size and would also use it boiled and mixed in mash. Now that grain is high it will be a good plan to try any similar wholesome low cost waste food products to help keep down the cost of egg production.

Feeding Egg Shells.

Q. Is it safe to feed fowls the shells of eggs that have been packed in water glass (sodium silicate)?

Indiana Subscriber.

A. We never tried it. We don't like to feed egg shells to our birds. One of the worst epidemics of fowl cholera we ever saw was started by feeding raw egg shells (from an unknown source).

For Early Broilers.

Q. I have handled poultry for several years but have never raised early

Whatglen S. C. Black Minorcas

MAKE A SWEEPING RECORD AT **NEW YORK STATE FAIR, 1914**

In a Monster Beauty Class of 125 Birds. The Best Known Lines in the Country Competing.

We Won Cocks 1-2-3; Hens 1-3-4; Cockerels 1-2-3; Pullets 1-2; Old Pen 2; Young Pen 2-3; Best Display, etc.

DOUBLE QUICK GRAIN SPROUTER

THE PERPETUAL POULTRY SILO--Grows Green Feed While You Wait

The First, the Original, the Pioneer of All Grain Sprouters. Built in six sizes, from ¼ bu. to 8 bu.; for a few hens to 1,000

The **Double Quick** originates and initiates—others imitate and appropriate. Fully 100 **Double Quicks** to every **half dozen** of all other kinds combined. Now in its **fourth** year—in use in **every** state and territory in the U. S.; in Canada and Mexico; in **eight** foreign countries; **thousands** have tested its value; many large poultry plants use from **one** to **five.**

"On Sept. 16, I ordered your No. 5, Double Quick Sprouter shipped to Maude L. Kaler, Columbia City, Ind. and this one is proving so satisfactory that she wants another one of the same size and therefore you will find draft in payment of this second sprouter."—Milo R. Meredith, Indianapolis, Ind.

"I ordered and received from you last fall one of your 5-tray Grain Sprouters. This works very satisfactory. I want one for 1,500 hens. I enclosed my check for your No. 6 Grain Sprouter."—E. A. Palmer, Providence, R. I.

"I am enclosing my check for **two more** of your No. 5, Double Quick Sprouters. The one I bought some weeks since, is doing fine work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass.

Close-to-Nature Co.
38 Front St.
Colfax, Iowa

broilers. I want to start a machine about December 10 and have the following pens to choose eggs from: Partridge Wyandottes, 2-year cocks to pullets; cockerels to 2 and 3-year hens; 2-year cocks to 2 and 3-year hens. Partridge Wyandottes crossed on Orpington pullets and Barred Rocks crossed on Orpington pullets.

Have been advised that the Barred Rocks do not feather out soon enough and the Wyandotte eggs run low in fertility that early in the season. I know that the Wyandottes grow very fast when young.

Jeffersonville, Ind. G. E. G.

A. Would use eggs for hatching from all the pens. Expect that late November and early December eggs will hatch pretty well this season. Chicks from any of the matings mentioned, if breeders are in good condition, should give good chicks that will stand forcing well. The Wyandottes and Wyandotte crosses will probably make the quickest growing and plumpest broilers, and they should stand up well under forcing.

Sex in Guineas.

Editor A. P. J.—J. C. in October number asks how to tell males from females in Guinea Fowl. I have bred White African Guineas for fifteen years. You cannot tell positively by the call. The male often uses the call persistently used by the female which sounds like "potrack." The female when alarmed or excited uses the harsh nervous clicking attributed to the male.

The male is rather more heavy in comb and wattles, has a slightly thicker neck and legs and is often larger than the female. The male is more combative toward other fowls than the female. The White Guinea is more docile and less inclined to wander than the Pearl. They will roost with the other poultry and lay in the nests in the poultry house, and do not appear to object to having their eggs removed. Their flesh is white, delicate and gamey.

Montrose, Ill. W. E. Patterson.

Sprouting Oats.

Q. (1) How warm should oats be kept to sprout quickly in an oat sprouter and under what conditions?

A. (1) Trays of sprouter should be kept clean and free from mould. Oats should be first washed with warm water and then put to soak over night. Spread out in tray about an inch deep and keep moist, watering once a day. Keep sprouter in room where temperature is between 60 and 70 degrees.

Q. (2) I have a hen house built on rock and have no floor; what is the best I can use to put in, coal ashes or sand? On top of either I am going to use straw litter. How deep must the sand or coal ashes be to protect the hens from the cold rock?

A. (2) Use sand. Coal ashes will become damp. Have sand a little over an inch deep.

Q. (3) Will spraying the roosts and drop boards with kerosene, after they are cleaned, kill and prevent lice?

A. (3) No. Dissolve in the kerosene all it will take up (or about one pound to the gallon) of crude napthalene flakes. Put this on to roosts and drop boards in the early morning, (so that it will dry in before roosting time) and apply it with a broad paint brush. If used twice a month it is effective as a liquid lice killer and it will get rid of all mites. Don't allow fowls to roost on perches wet with kerosene or they may be seriously blistered.

Q. What food is best for young pullets to get them to laying?

Theresa, N. Y. G. A. D.

A. Put them on the regular laying

SILVER WYANDOTTES

1374 E. 80th St.,
Cleveland, Ohio

HERE'S the way to solve the high cost of chicken feed problem! Here's the way to get the most eggs just at the time of year when you can get the most money for the eggs! Sprout grain. Get a "Successful" Sectional Grain Sprouter—the best grain sprouter made—the one that leads them all. It will make 3 bushels of tender, green, egg-making hen feed from 1 bushel of oats, wheat or rye. Sprouts grain in 24 hours. Then, gives you an inch of crisp, green, tempting sprouts every day after that. Such feed will simply *make* your hens lay when egg prices are highest. It will make early hatches possible. Make winter chicks grow fastest—reach marketable size sooner, when prices are highest. For proof, read the letters printed in this ad.

Our Absolute Money-Back Guarantee Protects You Fully

"Successful" Sectional Grain Sprouter

Built All of Steel—Lasts Practically Forever

Double steel walls. Metal trays. No wood to rot. Can't warp, shrink or swell. Prevents moulding of food so usual with wooden sprouters. Made with *large* glass doors. Made in sections—capacity from 50 to 600 hens. A wonderful money-saver and money maker for both little and big poultry raisers. You can start with just the size you need. Then your "Successful" Grain Sprouter can grow as your needs grow. Write at once for full details. For valuable booklet on proper care and feeding of chicks, ducks and turkeys 10c. Address

Des Moines Incubator Co., 561 3rd St., Des Moines, Iowa

ration for adult fowls. See article, "How to Get a Good Yield of Winter Eggs," in November A. P. J.

Chorea.

Q. I have a Partridge Wyandotte that is rather under size, wings slightly spread, body tilted forward and she is in a constant state of tremor. She eats well and seems otherwise happy. Do chickens ever have chorea? All the rest of my stock are healthy. Can you suggest a cause for condition of this bird?

Lemon City, Fla. A. P. R.

A. Chickens are subject to a variety of spasmodic disorders that may be classed under the term chorea. It is more common in young pullets than in male birds. Usually affects undersized, ill nourished specimens. Sometimes good sized, apparently healthy pullets are affected when beginning to lay. In well grown birds, otherwise apparently healthy, intestinal worms are a common cause. May in such specimens be caused by fright. Any intestinal irritation may result in spasmodic movement of muscles and trembling. Have noticed marked tendency to chorea in decoy ducks that have been shot over and have recovered from accidental injury. Had one that would lose control of its muscles and fall in a fit of tremor whenever startled by a loud noise or if otherwise badly frightened. Otherwise it appeared healthy. Disorder seems most common in late fall and early spring. In case of closely inbred and ill nourished chicks that have been stunted, we do not know of any treatment that will help them. Where the disorder is due to other disease or to intestinal parasites the remedy is to remove the cause. Bad air and overcrowding will predispose to this trouble. Well bred and well nourished fowls, having plenty of wholesome food and fresh air sleeping quarters are seldom affected; but may suffer temporary trouble through fright, injury, or intestinal parasites.

Aspergillosis.

Q. I have February hatched Rhode Island Red pullets. They have a good dry house but they get out in the wet. No drafts and no mites. They are good and fat and have red combs. One pullet seemed all right, was laying, ate her scratch food for breakfast. After that seemed to breathe heavy and at noon was dead. I cut her open and found that her crop was very soft, but the comb had turned very dark. Heart was covered with white spots and all through the

Make Your Hens Lay

When Eggs Are Worth Most

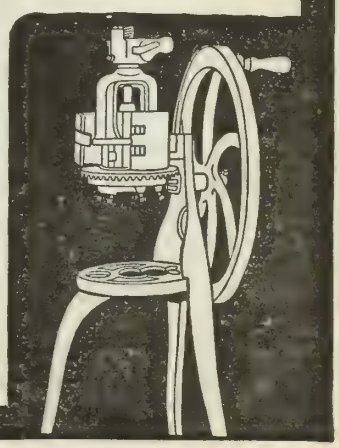
HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down



It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

Its self-governing feed automatically adapts the cutting to **your** strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on **10 Days' Free Trial**—no money down. If satisfied **after the trial,** buy it. If not, return it **at our expense.**

You want our good books, at any rate, send for them. We'll forward by return mail.

F. W. Mann Co., Box 56, Milford, Mass.

liver and intestines were white spots that looked like mould.

Portland, Ore. G. H. L.

A. Disease was probably aspergillosis, caused by parasitic fungi found in moulds. Mouldy litter, straw, forest leaves, sour swamp muck and mouldy, musty grain are the most common sources of this trouble. It only attacks susceptible individuals and quite commonly only a few are affected while the greater part of the flock escape. Sometimes where fowls range in dark, shady, swampy forest land or where ground of runs is very foul, or litter and grain is very musty and mouldy, a large number of birds will be affected. Treatment of affected cases does little or no good. The birds are usually sick for some time before disease is suspected. Prevent the trouble by avoiding the cause. As usually the disease is not noticed until the victim dies, the best plan is to burn the dead bird at once. Moulting birds exposed to cold fall rains are most commonly affected and the disease is more prevalent in cold wet weather. Prevent the disease by avoiding the cause.

Milk in Place of Beef Scrap.

Q. I have sixteen White Rock pullets mated with a 2-year-old cock. Would like a good ration made from following: Corn, oats, and wheat. Sprouted oats. Bran, middlings, corn meal, ground oats. They have range of a farm. How much milk should they get to take place of beef scrap? When will March and May hatched pullets lay?

Poplar Bluff, Mo. F. H.

A. Pullets should lay when six or seven months old. Mix your corn, wheat and oats about equal parts by weight at the start. After that vary the proportion according to the appetites of the birds and give them the most of the grain they prefer. Equal parts by weight of the ground foodstuffs will make a good mash. Wet it up with sweet milk. In using sour milk make it into curd cheese by first heating the sour milk and then squeezing out the whey. Would not feed the whey to the birds but they can have an allowance of the curd cheese daily. Feed the sprouted oats at noon in winter when fresh greens can not be had. We do not think that milk will take the place of beef scraps but with good farm range, milk fed as above will give very good results.

Grain Prices.

Q. Grain has been a little cheaper this first week in November than it has been all the fall; would you advise putting in a winter's supply?

Massachusetts Subscriber.

A. That is a difficult question to answer. It is reasonable to suppose that we may have quite a little fluctuation in grain prices. A great deal of grain is being shipped out of the country. At the present writing (November 10th) grain is more nearly normal in price with us than it has been for some time. We do not believe it will be much cheaper and if you have a good place to store it, you will probably be wise to put in such supply of good grain at reasonable prices as you can; enough to carry you through the winter. If you can get good sound old grain, you will do well to get a supply to grind up for chick food in the spring. Be sure to have a proper place to store it and to

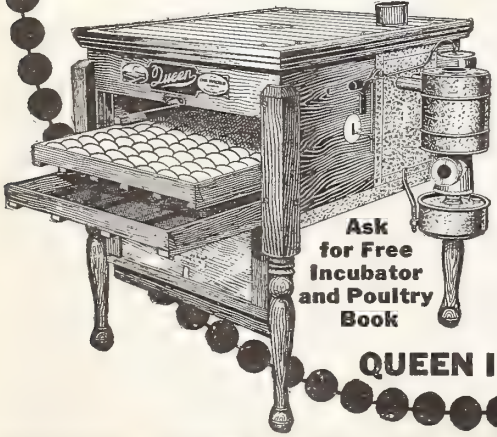
Not Only Big Hatches But a Better Average



A large successful poultry man writes: "We bought one Queen incubator from you in 1908. **It worked so well** that the next year we ordered 6. When we established our large hatchery in 1911, we ordered 23 more of the same size, (360-egg.) This spring we bought 10 of the Ranch size. Queen incubators turn out a better average hatch than any other make we have ever used, **producing stronger chicks.**"

QUEEN INCUBATORS

Built to Hatch Without Trouble

I'll Save You Money On a GOOD Hatcher

Are the choice of good poultrymen, as they are honestly built of good material. If you take your poultry business seriously you can't afford to be without them. Valuable improvements on the 1915 model, including **enlarged heater jacket,** to save oil, **drain valve** and **expansion tank.** You can sleep when you use a Queen as it never sleeps on the job.

Geo. E. Haynes, Hyde Park, Toledo, O., writes: "I hatched about 1000 in my Queens this season. I have used 4 other makes, but the Queen beats them all. I consider it the **best at any price,** and results prove it. Hatches at least 10% better than the best of the others. I outhatched every machine in the neighborhood every time, and averaged a good 85% for the season, while others were pleased to get 50 to 70% and very few got over 60% hatches."

C. F. Dunderdale, Fulford, Fla., writes: "I have used nearly all of the prominent makes, both hot water and hot air systems, and have found the **Queen superior to them all,** both as regards steadiness of temperature and large percentage of hatch. Have run a 360-egg Queen the whole season without changing the regulator, with no unnecessary bother outside of filling and trimming the lamp. It runs like a clock."

QUEEN INCUBATOR CO., 105 Bryan Ave., Lincoln, Neb.

protect it from rats. Rats can easily spoil all your chances of making a saving, by the damage they will do to an unprotected store of grain.

White Diarrhoea Stock.

Q. (1) Would it be advisable to hatch and rear chicks from healthy uninfected stock under hens infected with white diarrhoea, that had had bacillary white diarrhoea as chicks or had been in a flock with infected birds, provided such hens seemed healthy and were kept under sanitary conditions?

A. (1) It would not.

Q. (2) I have a cock bird that was mated last spring with infected hens. The greater part of the chicks hatched died of white diarrhoea. This year he was mated with uninfected hens and produced good healthy chicks. Could I mate him the coming spring to uninfected hens and get good results?

Mansfield, Conn. C. E. F.

A. (2) Probably, provided he is healthy and in good condition.

Single Combed Wyandottes.

Q. (1) I have some Wyandottes with single combs; would you advise me to put them in my breeding pen?

A. (1) No. Keep the pullets for laying if you wish, but don't breed single comb sports.

Q. (2) Will they allow single comb Wyandottes in the laying contests?

A. (2) You will have to ask the persons in charge of the contests.

Q. (3) How old should a male bird be before he is used for breeding?

A. (3) One year.

Q. (4) How often should I take hens out of trap nests?

A. (4) When hen is ready to come out after laying. Visit the trap nests four or five times a day.

Q. (5) How long can I keep eggs before putting them in incubator?

A. (5) Not over three weeks. The fresher they are when set the better.

Q. (6) I paid $8 a setting for these eggs. Is it all right for some of the chickens to have single combs? They are from a heavy laying strain.

Kokomo, Ind. Subscriber.

A. (6) Wyandottes will throw some single comb sports, some strains are more liable to throw single combed chicks than others.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Know that you will regret to hear of the loss of eight (8) of my best birds through being smothered by the American Express Company en route to the Allentown Fair. Am going to give you the facts in the case so that if possible you can tell readers of AMERICAN POULTRY JOURNAL of this loss in order that all may understand why I will not be showing around at many of the big shows this year as I have done in the past.

The birds, twenty-nine of them, left Pennington at 7:37 a. m., in the cool of the morning, and did not arrive in Allentown, only seventy-eight railroad miles away, until 6:30 in the evening. In other words, they traveled at the speed of about eight miles per hour after express rates had been paid for. They were ten hours and fifty-three minutes on the road. The fault was not in the construction of the coops, for with the exception of the largest and best of them all, all had been to Allentown, Pa., twice before, Hagerstown twice, Warrenton, Va., twice, Chicago, Ill., once, Buffalo, N. Y., once, and Madison Square Garden once, and the big one had been to Warrenton, Va., once and Madison Square Garden once. They had never had a smothered bird in before. I have taken action against the American Express Company and will let you know the final results later.

And the birds lost were a loss to the whole Cornish fraternity. They included "John Bull," "Uncle Sam," "Lady Alice," "Helen," two birds which I had just imported at a good deal of risk on account of the unsettled conditions on the seas, and another cockerel and hen, the cockerel being pronounced by many as being the best Cornish that I had ever raised, and you know that I have raised a few. John W. Ward, Jr.

Pennington, N. J.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Would say to Mr. John St. John that the later editions of the 1910 Standard has cut out the cutting for defects for down between the toes. I called attention of this difference to the standard makers and they fixed it so that down between the toes is a disqualification. I am glad that Mr. St. John feels that down between the toes should not disqualify what otherwise is the best bird in the class.

THERE IS SECURITY IN HALL EQUIPMENTS

THE 1915 MODEL HALL MAMMOTH INCUBATOR NOW READY FOR IMMEDIATE SHIPMENT

Day after day, week after week and month after month, for almost a year now, we have conducted an investigation to find out if it was possible to improve the Hall Mammoth Incubator.

We had the greatest poultry raising experts in the country pass opinions upon every phase of incubators and incubation; our heating and mechanical engineers checked these opinions with their knowledge and their experiments.

The Hall principle as established in 1896 was demonstrated the correct principle; investigation and experiments simply confirmed it, but—

As a result of these researches, opinions and experiments, certain refinements in mechanical action (or operation) were discovered and applied; the result is our 1915 Model, Hall Mammoth Incubator.

Former models of Hall Mammoth Incubators were correct—they are unequalled, or rather, not even approached by any other make; the findings of the experts we employed simply brought to light seemingly unimportant features that could be refined and that no other manufacturer had ever delved into so minutely as to solve the consequences of refinements in their construction and adaptation.

The result is, the buying of a Hall Mammoth Incubator is like buying a United States Government bond—you invest knowing you are buying absolute security—and that you are certain of receiving greater value than offered anywhere, elsewhere, no matter how loudly they may blow their own horns.

BEAR IN MIND THESE FACTS

The Hall was the original Mammoth Incubator and the original principles are still retained, unaltered.

It has always been the standard. And it is so far ahead of any other machine that there is no comparison.

Our 1915 model is positively accident and fool proof heat controlled. Temperature distribution on the eggs is uniform to a degree.

It is mechanically regulated at the source of heat and cannot go wrong.

Ventilation and humidity in the compartments are maintained by an inexorable law of nature.

SEND TODAY FOR THIS MANUAL

But this space is too limited to even attempt to set forth the really wonderful 1915 Hall Mammoth Incubator. And as we write this advertisement the printer has our new catalog well under way and you owe it to yourself to send for this interesting book on hatching eggs.

It is not only a catalog of Hall equipment; it is a Poultrymans' Manual as well and contains information of value that should be in every Poultrymans' hands.

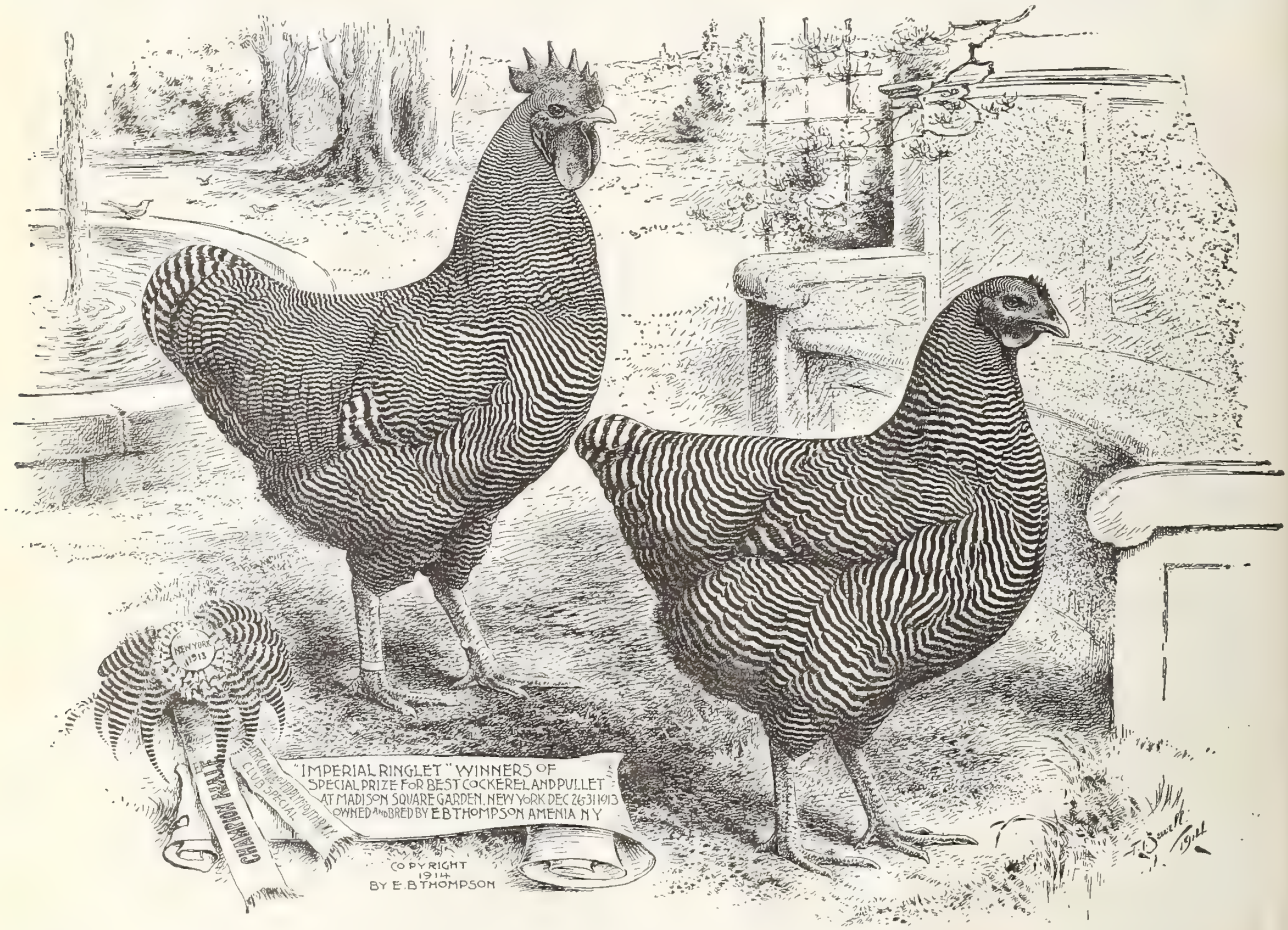
Home and the Table
Good Things for Everybody

Helen F. Woods, Editor

At Christmas when the heart is young,
The spirit eager to make glad
The lives and homes of countless sad
And sickened souls among,
Wait not for wealth. The Singing Heart
Makes merrie, by look, or lift, or word,
And helps to swell the volume
Of the sweetest music heard;
Radiates its gladness in the humblest
human's part.

THERE lingers in the minds of many people an idea that the chief essential for doing good lies in the possession of wealth, money being held up as the magic wand which calls forth all the best things of life.



If you will but take note of the daily conversation about you, it will be made plainly evident that practically all of us base our ability for helpfulness upon the extent of our bank accounts, and if there is one thing more than another longed for in this world, it is wealth.

On the other hand, if you will cast about you in search of good works, genuine helpfulness and happiness, you will seldom find these things in the possession of people of wealth. They are never dispensed in special high priced packages but are well within the possibilities of the lowliest among us.

Have you ever met face to face a real Santa Claus? We all know that he exists, and is very busy at this season of the year, but have you ever had the good fortune to get into the inner portals of his Glad Shop? Once, I did. But in this instance, as is sometimes the case, Santa Claus happened to be a sweet faced, cheery voiced *young* woman, nearing four score years. Do not take exception to the young, my friends. Her mind was young and alert. Her hands were young and capable. Her feet were young and willing. Her heart was younger than all. She had the Singing Heart, which is the kind that can never grow old. Each year, she had lived, for —oh, many, many years, had been treasured as one more precious group of seasons in which to tune her heart a little more in accord with the human lives with which she came in contact, and her heart music had grown wonderfully sweet to all who were so favored as to hear it.

Her Santa Claus shop was small in size—as was she. Oh, no, she was not a millionaire—not in so far as money wealth was concerned. Counting wealth of good works, genuine helpfulness and happiness, probably no other has outclassed her. Her income in dollars and cents, perhaps, would not keep a modern debutante supplied with gloves and silk stockings but, as she had expressed it, "quite sufficient" for her needs.

When I made my visit to her wonderful shop, Christmas was only a few weeks away and her rooms were cheery with much preparation. I could not enumerate all the Christmassy things I saw there, but—there were bulbs that had been started weeks before and now soon to blossom, boxes of seed pods, gathered from summer blooms, and various packages of bulbs for spring

IMPERIAL "RINGLET" BARRED ROCKS.

Winners of Special Prize offered by the President of the American Barred Plymouth Rock Club for Best Cockerel and Pullet at Madison Square Garden, New York, winter 1913-14. These birds are owned, were bred and exhibited by E. B. Thompson, Amenia, N. Y., originator of the World Renowned "Ringlet" Strain of Barred Plymouth Rocks. The "Ringlets" have made many marvelous Prize Records at New York shows during the past 25 years.

planting; potted geraniums, especially the fragrant rose geranium, graced her windows, ready to be left with appreciative recipients "the night before"; boxes of doll's clothes—some made and some with patterns and cloth for little unskilled hands to work on; muslin scrap books, filled with really beautiful pictures clipped from papers and magazines, some pasted in, some left loose for the young artist to cultivate his ability in their arrangement; a helpful story clipped from an old magazine, mounted, and especially suited to cheer the unfortunate lot of the one to whom it was to be sent; a poem to yet another who through months of great tribulation, needed just these beautifully expressed thoughts to give her heart courage to go on. Here on the table was a calendar, made for a poor lumberman's wife, living miles from mankind's civilization, and with practically no literature to feed her mind's hunger. Every page of this unique gift bore a gem of thought, a real "heart throb," and sometimes there were attractive little sketches cut from magazines, and suitable to the text. No traveler, however weary or discouraged could fail to gain inspiration, and the determination to keep on trying, from the gems of these three hundred and sixty-five pages of this remarkable gift.

And the dolls! They were really the most squeezeable, wantable dolls. Any little make-believe Mother would have the Singing Heart on the morning of the anniversary of the day when the Christ was born if she could find one of these peeping from the top of her stocking. Oh, the treasure of a rag doll! Oh, the nights of hugging one in close embrace! It is really hard, my friends, for a child to have the Singing Heart who has never known the joys of having a plump, squeezeable rag doll to carry to bed of a winter night. The Santa Claus Lady told me so—and I know she spoke the truth.

There was much more in the shop. All kinds of knitted things—caps and mittens and woolen socks for a *young* gentleman with whom the Santa Claus Lady had gone to school years ago, down in farthermost Maine. He now had rheumatism, especially in his hand and feet but the music of a Singing Heart radiated from the cramped characters of a joy letter he had written her not long before. "You will notice," said the Santa Claus Lady, "that he clothes his wisdom in wit, and that the effect upon reading it is that of sheer joy, and you rejoice with him, being swayed and uplifted by the beauty of his heart melody."

"And to think," she went on, "that for a long time after the school days I had almost forgotten that I knew him, when, lo, one day he came bobbing up out of the mist of the past days, radiant with his wealth of years; and his letters have been a delight and inspiration ever since." Such letters they were! The writing so sort of cramped and jerky in outline that I guessed he had the rheumatism, and he came back admitting that I had guessed his secret—that it might be true that a woman could not keep a secret but it was equally true that you could not keep one from her! And anyone who has ever received such letters knows that writing them is about the best way of being Christmassy to friends at a distance. The week before I like to get off a great many and some of the replies are among my choicest possessions. We all need this Christmas season to bring us nearer to the heart of things. Think how it makes your heart sing to get a line from a friend whom you have not heard of, for a long, long time and who has been apparently swallowed up in mystery. One Christmas just such a thing came to me. We had been girl friends, and somehow through the boarding school years, and the early years of marriage which followed closely, and the child rearing years, I had forgotten this dark haired Miriam of my early youth. I say forgotten her, for consciously I no longer thought of her, or harbored her friendship. But tucked away in some little corner of my brain there were all manner of sweet memories of this delightful friend of my youth, and that needed but the few lines sent me from her faraway Western home to awaken, and waft their sweet fragrance around all the years to come. I had loved Miriam all these years but the distance and silence and cares of life had for the time being, not killed it, or lessened it, in any way, but rather kept it warm and close by the heart fires to be brought forth now in the best part of life, to be enjoyed.

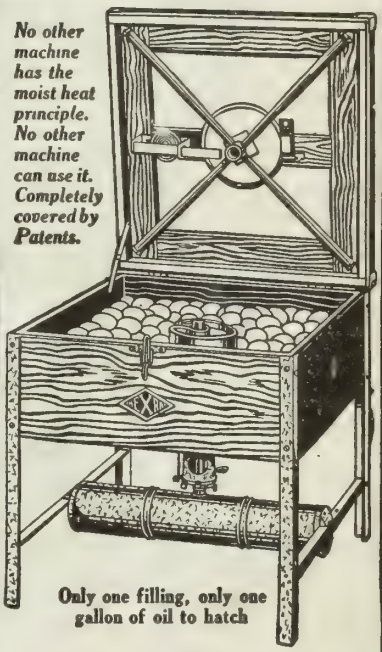
"Oh, very surely, the letters are one of the best of Christmas things. And never make the mistake of losing sight of the old friends. Keep making old ones of the new ones, for an old friend-

Don't Be Without It

Moist Heat Makes Record Hatches

THE X RAY

You Want Big Hatches this year. Because this is going to be the most profitable year in the poultry business. Every chick counts for money. Every egg counts. *Don't take chances with the dry heat of old style machines.* You don't have to. That trouble is over forever for all poultrymen who use the famous

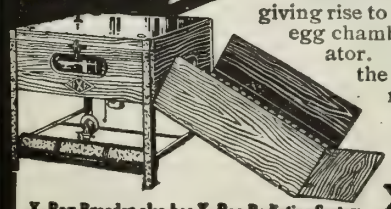


X-Ray Incubators

X-Ray Radiator and Vapor Generator produce natural moist heat just like the setting hen's. The most remarkable incubator improvement we have ever announced.

X-Ray Radiator
X-Ray Vapor Generator

X-Ray Incubators, equipped with this wonderful exclusive heating system, insure you against dead-in-the-shell chicks. Hatches the largest percentage, and because it is the *natural* heat, it makes good, strong, healthy chicks—the kind that thrive. The heat from the lamp underneath first strikes the *New X-Ray Vapor Generator*, thus giving rise to a mild moisture which pervades the whole egg chamber. The heat passes on to the X-Ray Radiator. The tapered tubes crossing at the top form the wonderful heating feature found in no other machine. The *heat from the radiator must pass through the moisture* from the vapor generator carrying the natural moisture to each egg.



No other machine has the moist heat principle. No other machine can use it. Completely covered by Patents.

Only one filling, only one gallon of oil to hatch

Send for Free Book No. 10

Fifteen Special Exclusive X-Ray Features are described in our new book—the finest we ever published. We will send you our direct-to-you prices. *Freight prepaid.* No agents. Write today.

X-Ray Brooder also has X-Ray Radiating System

X-RAY INCUBATOR CO., Des Moines, Iowa

ship is one of God's rarest gifts."

This little Santa Claus Lady's shop is now closed, but her Singing Heart will keep on through the ages, helping to "swell the volume of the sweetest music heard" and the radiance of her presence will always be felt by those who knew and loved her.

The following Christmas suggestions contributed by our readers, are presented with the hope that we may all cultivate the Singing Heart.

Lady Baltimore Cake.

By R. T. M.

Sift three times, three and one-half cups of flour, one heaping teaspoonful cream of tartar, one-half teaspoonful soda, two cups of sugar. Melt one cup of butter and add to it one cup of sweet milk and mix with the sifted mixture. Fold in the stiffly beaten whites of six eggs and flavor with mace. Bake in three layers in tins about eight by twelve inches.

Pound Cakes.

By R. T. M.

Beat three-fourths of a pound of butter until light and creamy, and add to it, three-fourths of a pound of sugar, one pound of flour, the yolks of seven eggs beaten until lemon color, and the stiffly beaten whites of four eggs. Beat a few times, then butter a baking sheet or sheet of heavy white paper, flour it and spread thinly with the cake mixture, sprinkle a few blanched and sliced almonds, and thoroughly cleaned currants and sift sugar over these. Bake in a medium hot oven until light brown in color and cut into squares while warm.

Filling.

Boil three cups of granulated sugar with one cup of boiling water until it spins a thread when dropped from a spoon. Remove from the stove and pour slowly over the beaten whites of three eggs and beat until the proper consistency to spread. Add one cup chopped nut meats, one cup chopped raisins, flavor with vanilla and spread between the layers.

Delights.

By R. T. M.

Sift together one pound of flour and six ounces of sugar. Add a well beaten egg and three-fourths pound of soft butter. When well mixed, add also one-half cup sherry, which should make the dough about the consistency of putty. Place a lump of it in a shallow baking pan and press out as thin as possible with the fingers, flouring the hands frequently while doing so. Sift over the top a little powdered sugar and a pinch of ground cinnamon. Bake in moderately hot oven until a delicate golden brown. After removing from the oven, cut into oblongs with a sharp knife. When cold, serve with tea or coffee.

Chocolate Sweets.

By J. H. N.

Boil two cups of granulated sugar with one-half cup cream until it drops in a mass of bubbles from a spoon. Remove from the stove and add a teaspoonful of vanilla. Place the pan in a vessel of cold water and beat until firm enough to form into shapes. When formed, dip each one in melted chocolate and place a nut meat on top.

Cocoanut Cream Candy.

By J. H. N.

Boil three cups granulated sugar, scant half cup of water and half a teaspoonful of cream of tartar for ten minutes. Add a cup of shredded cocoanut, remove from the stove and flavor with vanilla. Beat for a minute and drop by teaspoon on white paper.

Peanut Brittle.

By J. H. N.

Boil two cups sugar and one-half cup of water for five minutes and add one half teaspoonful cream of tartar dissolved in a little cold water. Cook until it is brittle when dropped in cold water. Then add a teaspoonful of butter and cook a few minutes longer. Have nut meats spread over a large platter which has first been buttered and pour the brittle over these. Set away to cool.

Chocolate Caramels.

By J. H. N.

Put three cups of sugar, one cup of rich milk, a quarter of a cake of chocolate over the fire and allow to come to a boil, watching it carefully to prevent burning. When nearly done add a tablespoonful of butter. Test in cold water and when it can be handled in a lump,

"The Lifebuoy of Chickdom"

is what one enthusiastic Breeder calls the most complete, most efficient and most successful brooding equipment, and this is only one of hundreds of progressive breeders who know that the

Duplex Brooder Stove and Ventilator Combined

will not only raise more and better chicks, but will positively save 9-10 the labor and ¾ the expense. No more back-breaking work, heart-breaking losses and profit-smashing expense, if you install a Duplex. ***Sold on 30 Days' Free Trial and we pay the freight.***

OUR FREE BOOK gives fullest information regarding ***this thoroughly tested invention*** —Why experiment with something new? Enclose 10c when you write for Booklet and we will include our book on Winter Broilers and Plan for Ideal Brooder House. The catalog is free for the asking.

DUPLEX COLONY BROODER CO.
BOX 614, ROCKFORD, ILLINOIS

Quickness of Growth Marvelous!

To the Manufacturers of "The Lifebuoy of Chickdom": May 11, 1914.

Gentlemen:—I thought I would snatch a few seconds of my busy time to let you know of the success I am having with your stoves. In short I must say for the benefit of all poultry raisers—**You can't raise chicks successfully without a DUPLEX.** The losses are not worth mentioning—the health of the chicks surprising and the quickness of growth marvelous. The stove certainly does what you claim it would do. There is always sweet, fresh smelling air in the house, no oil fumes whatever are noticeable. The absence of chicks pasted up behind has even been noticeable to the many visitors on the place. One expression was 'A hen can't do as well.'

The consumption of oil in our latitude in March, we being hemmed in on four sides by high mountains, and quite cold. It took five days to empty the tank, but now fifteen gallons will run me close to six days which is very little considering the number of chicks we are brooding. I have close to five thousand at present. Some of my cockerels hatched March 29 weigh 12 ounces (six weeks old) have at this writing a hatch of 1934 fertile eggs coming off and will move the oldest of the chicks on the range.

Respectfully yours, Ridgedale Poultry Farm, West Virginia. Frank M. Spies, Mgr.

Buy Your GRAIN SPROUTER Now

Don't put it off any longer. This is going to be a hard winter for chickens not fed sprouted oats. From now on, for 4 months, snow will blanket the earth, the ground will be frozen or filled with snow-melted puddles and it will be practically impossible to get green stuff of any sort.

You know some green feed must be given chickens to secure best results. And the logical way to secure plenty of this nourishing, strengthening, vegetable feed at this time—**and cheaply**—is by means of the old reliable

A Reliance Grain Sprouter is as much a part of the equipment of a successful poultry farm as healthy fowl. Simply because it produces the kind of green feed that

—Increases Egg Production
—Fattens Pullets
—Keeps Fowl Healthy
—Cuts Down Feed Bill

Reliance Grain Sprouter

This machine can be **operated anywhere in the house,** continually producing bushels of juicy, tender sprouts **every day,** by simply starting trays a few hours apart.

If you want more eggs now **when prices are high,** start a Reliance Sprouter going at once.

Now Sold at Bargain Prices

Our No. 2 Reliance Sprouter, Guaranteed Capacity large enough for 100 hens. **Other sizes, $5.00, $8.50 and $11.50.** Order direct or send for literature, pictures and prices of our entire line. **$7.00**

This is the original **double sprouter** made by one of the **largest and best incubator factories in the world.** It has **better heating and ventilating system,** thus insuring sprouts free from mold. Besides, the front of the Reliance **contains more glass** which induces larger quantity of sprouts.

All shipments made on guarantee of satisfaction or money back. Sprouter comes complete, ready to run. **No extras to buy. Send Postal for Literature — or order direct from ad.**

Reliance Incubator Co., Dept. 23, Freeport, Ill.
Manufacturers of Grain Sprouters, Incubators and Brooders

pour in a flat, buttered dish and cut into squares as it cools.

Correction.

On page 1324 of the November Journal in the recipe for "Excellent Cake, by H. B.," the following mistake occurs: in the last line of the receipt which says, "put together with butter," it should read, "put together with butter frosting given below."

Believes in Open-Air Houses.

Portsmouth, Va., Sept. 18, 1914.
Editor AMERICAN POULTRY JOURNAL:

Have been reading Dr. Woods' articles on open-air poultry houses, published in AMERICAN POULTRY JOURNAL, with a great deal of interest, as I am a great believer in fresh air for poultry.

I am enclosing photo of a house in which I had eight White Plymouth Rock

Open-Front Poultry House used by J. W. Borum, Portsmouth, Va.

pullets last winter, and their records were as follows:

December, 1913, 188 eggs.
January, 1914, 189 eggs.
February, 1914, 175 eggs.
March, 1914, 174 eggs.
April 28, 1914, 148 eggs.
Total, 874 eggs.
Pullets sold.

The above record, I consider, a very good one and think plenty of fresh air with no drafts is conducive to a heavy egg yield.

When I started poultry keeping about three years ago I bought Dr. Woods' book, "Open Air Poultry Houses for All Climates," and all my houses have open fronts. It is a rare thing for me to have a case of sickness among my flocks.

With best wishes for a prosperous season, J. W. BORUM.

(Note.—We are glad to have this report and will welcome yours, Friend Reader. Let us know about your experience with poultry.—Editor A. P. J.)

A Letter From E. B. Thompson, President of the American Poultry Association, to Its Members.

If every one of you will each get the application of one new member during the month of December and send to Secretary S. T. Campbell, Mansfield, Ohio, you will do a loyal and splendid duty. The accomplishment of your united results in obtaining almost 6,000 new members will be a "New Year's present" to the American Poultry Association that every one of you will feel proud of and not soon forget.

The month of December, while the last month in the year, is the month of joy, for the reason that it has in it the week of the "Christmas holidays." I urge upon you to write Secretary Campbell at once for application blanks and let at least one of these be returned to him with a new member's name upon it before January 1, 1915.

The great association to which you belong will long remember the separate and collective New Year's gift of 6,000 new members that you can easily and quickly obtain. Every one of you knows that the larger our membership the more powerful our organization will grow to be and the more helpful good will come to every fancier and poultry breeder in the United States and Canada.

With compliments of the coming holiday season and wishing every one of you a happy New Year which will abound in prosperity, I remain Yours very truly,

E. B. Thompson.

100 Golden Wyandotte Cockerels 100

All select birds. High class breeders and exhibition. 12 years constant winning in best shows of this country. Write for full information and prices.

Buy Our Stock And Make A Name For Yourself

Each Wilburtha bird comes from a race of conquerors—and blood tells, both in prizes and profits. When Wilburtha recently acquired the entire flock of S. C. White Leghorns from Dune Alpin Farm, Hampton, L. I., together with the man who bred them, much was added to her present reputation of having, and ably managing, "the best all-around strains of the best all-around breeds." Dune Alpin Leghorns are known the country over for their show and yard performances—and Wilburtha S. C. Buff Leghorns, Columbian Wyandottes and Columbian Plymouth Rocks enjoy the same reputation for their respective breeds. If you are looking for the best show stock of the best utility breeds in the country, at reasonable prices, you will find them at Wilburtha. But you must order early, to get the pick. Better write *at once* for full particulars.

Opening Battles of 1914 Season Won

BY

OWEN FARMS BIRDS

AT

NEW YORK STATE FAIR

AND AT THE

GREAT ALLENTOWN FAIR

Buff Orpingtons

Syracuse—None shown.

Allentown—1st cock, 2d hen, 1st cockerel, 1st pullet, 1st and 2d pen, with six entries, and cup for BEST PEN in show any variety. Champion male and champion female.

White Orpingtons

Syracuse—1st cock, 1st and 2d hen, 1st and 2d pullet, 1st old pen, 1st young pen.

Allentown—1st hen, 1st cockerel, 1st, 2d and 3d pullet, 1st and 2d pen. Champion male and champion female.

White Plymouth Rocks

Syracuse—2d and 3d cock, 1st and 2d hen, 1st and 3d cockerel, 1st and 2d pullet, 1st old pen, 1st young pen, cup for TEN BEST BIRDS in show, cup for BEST TEN BIRDS in American class, cup for best 1914 YOUNGSTER in show.

Allentown—1st and 4th hen, 1st and 3d cockerel, 1st and 3d pen. 1st hen won two cups for BEST BIRD in class, all varieties competing. Champion male and champion female.

White Wyandottes

Syracuse—1st old pen, 2d young pen, 4th hen, 2d pullet, with six entries. My cock bird had not moulted a feather and could not compete with the specially moulted birds. My cockerel was much younger than the specially grown winners. I now have the finest Wyandotte cocks and cockerels I have ever seen and ready to win from this time on.

Allentown—None shown.

S. C. Rhode Island Reds

Syracuse—1st, 2d and 5th cockerel in a class of 32 cockerels.

Allentown—1st hen, 1st, 2d and 4th cockerel, 1st and 2d pen, cup for BEST RED in show won by 1st cockerel. Champion male and champion female.

26 out of a possible 44 firsts with two different strings of birds at the two highest quality fairs in all America.

Winter Shows

You now know very closely how your old birds will moult and how your young birds will develop. You will need to strengthen your string by buying a cock, hen, cockerel, pullet or pen. Why not make your winning certain by calling on my vast resources to help you out? Among my 6,000 carefully selected old and young birds are the **exact birds you need** to help you make a **sweeping victory.**

Utility Qualities

262 eggs in 290 consecutive days and 236 eggs in less than 300 consecutive days are two trapnest records reported by customers made by pullets grown here and sold by me. These unsolicited statements from my customers emphasize the utility qualities of my birds.

Breeding Stock

Carefully mated pens for breeding utility or show birds are now offered in all my varieties. Pens will be carefully selected by Mr. Davey or the writer, whose experience mating thoroughbred poultry covers 35 and 25 years respectively. If you want line-bred birds that lay, pay and produce quality; strong husky birds that have never known a sick minute and that have been grown on free range under natural conditions, **send your order to OWEN FARMS and receive better value than you can obtain anywhere else for your investment.**

Satisfaction Guaranteed

Every customer or I will pay return charges and refund full purchase price. Write me exactly what you need and receive my catalogue.

Chick Chats

by H. P. Schwab

A Merry Xmas and seasonable wishes to all "Our Folks."

* * *

Resolutions are always in order (if you intend to keep them), so let us now resolve to exhibit, to raise more and better stock, to help our fellow-man and to try for a greater industry and a greater general success.

* * *

Keep your stock in condition, look well to their wants and remember that variety is the spice of life. Every effort now made will have its effect for betterment and an assurance of better stock next year.

* * *

Bear in mind at all times the breeding season that is to come, and that no labor is lost; this is particularly true of the poultry business, for the reward is sure to come, the satisfaction will be so much greater knowing it is a result of your interest in your fowls.

* * *

There is evidently something radically wrong in the East, for "Hank" has had no mention in the Fancier and Stockkeeper for two weeks.

* * *

She—Is it a secret society?

He—No. Didn't I tell you there were women in it?

* * *

Some people don't see special values in anything, still it is good to investigate fully those that seem reasonable, for they may prove practical and of special worth to many. Keep posted and keep trying to improve every branch of your business. If you can lessen your work, do so; the poultry feeders now on the market are giving results; they save time and feed. We were lately on a farm where over 100 of the Simplex Faultless feeders were used with satisfaction to the owner.

* * *

They don't forget to work like the owner does sometimes and the stock is sure to be fed when they want it; also getting exercise, while they are beneficial and insure regular feeding they are particularly recommended as a practical labor-saving device.

* * *

The eagle is the bird to soar,
The hawk is the king of the woods;
The mocking bird can sing the score,
But the hen delivers the goods.

* * *

From the proceedings of the A. P. A. at the late convention, which is just at hand, it must be evident that those in attendance did their level best for poultry and the grand old association.

* * *

The increased cost of peroxide is bound to have the effect of making blondes a little dearer than ever.

* * *

The more trouble some people have the more they want to borrow.

* * *

Let us have peace. Any one edition of the daily press nowadays should forever guarantee peace among the nations of the world.

* * *

Don't miss the January issue of the A. P. J. It will be our aninversary number and the largest and best poultry journal ever issued, illustrated and full of good things, as usual.

* * *

The A. P. J. Year Book for 1915 will also be larger and better than ever, with many new features. It is a standard poultry guide and covers the entire field from A to Z. Write for further particulars.

* * *

The show season has opened with a rush. Williamsport with over 2,300 entries. The open door was the feature and the attendance the best ever.

* * *

Buffalo was again the beauty show—further reports of these to follow.

* * *

The death of Dr. A. W. Bell was a piece of surprising news to us. A friend of more than twenty years. He was one

Any One Can Win where the classes are small or the competition is not keen and, dear readers, do not be led into believing that the fellow who makes big wins necessarily makes them in keen, competition for the name of the show does not indicate competition.

FAIRVIEW WHITE ROCKS

Have always hunted competition and have ALWAYS won their share of the ribbons. At the late Illinois State Fair, they won 1st and 3d cock on two; 1st and 4th hen on three; 3rd and 4th cockerel on four; 3rd and 4th pullet on three and 2d old and 2d young pen on one of each. You will note that I won two out of three firsts on old stock and did it with six less birds than my competitor exhibited in these classes, besides my share of seconds, thirds and fourths on young stock which was not matured enough to compete with the early hatched youngsters shown by my competitor. Was there any competition? Look up the report of the show and judge for yourself.

I have over 1000 young birds with blood lines the same as these and other noted winners and can furnish winners for any show, anywhere. Write your wants and mention American Poultry Journal. Catalogue free.

GUY DAILY **Box A** **Jeffersonville, Indiana**

PROOF THAT PARKS' STRAIN OF BRED TO-LAY BARRED PLYMOUTH ROCKS

Have laid their way into world-wide popularity can be found in our hundreds of unsolicited laying reports from all over America and the world.

Parsons Chicken Ranch, El Paso, Tex.—126 hens of your breeding have averaged 208 eggs. Percy Houghton, Sidney Devon, England—The birds I recently imported from you have laid splendidly. E. H. W. Broadbert, Lihua Kania, Hawaiian Islands—The birds you sent are not only good lookers but mighty good layers. W. V. McKenzie, Skagway, Alaska—Your chickens are certainly phenomenal layers. With the thermometer 20 below zero, they are shelling out the eggs that are selling at $1 per dozen. W. R. Hayne, Timura, New Zealand—Received the trio, they surely have the laying habit, one laid day of arrival and the other two days later. D. W. Fairlie, South End, Canada—I think your strain is a world beater. I never had anything equal them for egg production.

You'll find a lot still more convincing in my new large free cockerel circular, also a full description and proof that Parks' "bred to transmit the lay" cockerels with their over 25 years of careful selection, trapnesting ond pedigreeing for eggs do stamp that improvement in the way of eggs on their off-spring. My last Winter's winnings show how close we breed to the standard requirements. **Cockerel circular free.** Cockerels, $3 up. 40-page catalogue, a dime. Deduct same from first order. (Mrs. C. W. Beatham, Cardena, Cal.—Your catalogue is worth more than many $1.00 books.)

J. W. Parks : Box J, Altoona, Penna., U. S. A.

of the early show builders of Canada and had a prominent part in making the great National Exhibition at Toronto. Of late years he has been in the Northwest in charge of the live stock departments where he was again building up a show of national value and importance. We will miss him.

* * *

Pure, sound, clean food of highest value is none too good for poultry where results are expected.

* * *

We feel that particular progress is being made in the poultry industry year by year, but never more than right now. Our greatest breeders with greatest show records find value in practical worth of their fowls and never more than now have they worked harder to produce money from poultry.

* * *

The basis of the fancy is soundly placed on practical worth, to build and improve on this has been the effort, and the success attained is noteworthy. Standard bred fowls carry more real worth than ever, breed to type and keep records all spell success.

* * *

While the Doctor seems to think we should give the readers more chicken talks, they seem to be well satisfied with our chats according to late reports. Here is one. Dr. Woods, why not let H. P. Schwab liven things up? I think he is one of the best writers on the staff of the A. P. J. I generally read Chick Chats first. (Signed) John Huber, Dinuba, Cal.

* * *

We note with interest that W. S. Russell will have charge of the Special and Sales classes at the San Francisco Exposition. Mr. Russell is competent and we would like to see him appointed superintendent of the Poultry Department at the Panama exposition.

* * *

Do all the good you can,
By all the means you can,
In all the ways you can,
To all the people you can,
As long as ever you can.

* * *

Our friends are still sending us Old Poultry Books and Standards, for which we are very grateful.

* * *

Secretary Hewes lays claim to many things in his Chicago premium list. But when he claims to have originated the idea of making cockerel and pullet classes for Barred Rocks, he is in error. Such classes were held at New York, Rochester, Philadelphia, Chicago, etc., years before Mr. Hewes became secretary. We give him credit for what he has done, but for no more than that. The facts in this particular case are that we originated this idea and had it adopted by the poultry association mentioned.

* * *

This has been an ideal Fall for the young stock who have had every opportunity to grow and mature, the quality is surprising, to say the least.

* * *

Wherever we go we hear of new breeders going to show at the M. S. Garden, New York, February 12-19, 1915. Of course, all the old vets will be there and we predict this will be the greatest of all New York shows. The season is well adapted to time and place and with Charlie Cleveland in charge look for a "boomer."

* * *

Pittsburgh is going to live up to its reputation and Secretary Craig assures us of a greater Pittsburgh show. They will have to travel fast to improve on last year's exhibit.

* * *

He who knows, and he knows he knows—
He is wise—follow him.

He who knows, and knows not he knows—
He is asleep—wake him.

He who knows not, and know not he knows—
He is a fool—shun him.

He who knows not, and knows he knows not—
He is a child—teach him.

* * *

Magistrate—"Can't this case be settled out of court?"

Mulligan—"Shure! That's phat we wuz thryin' to do, yer honor, whin the polis interfered."

* * *

The farmers of the U. S. A. are pocketing $5,068,742,000 for their 1914 crops, a clear gain of $104,000,000 more than last year, according to the Government reports. This should insure a contented holiday season for all.

* * *

The above figures do not include poultry values. Add their billion dollar egg value and half that for meat, etc.,

YOUNG'S Strain S. C. W. LEGHORNS

I Have No Other Breeds

They are the standard for all the Leghorns of all America, and the greatest layers of all domestic fowls. At the World's Famous and Premier Show of America, Madison Square Garden, New York, for the past thirteen consecutive years I have won best display and from three to five first prizes, every bird being bred and raised by me. Hundreds of yearling hens for sale from my best line bred laying stock, $2.00 up, and the grandest lot of cockerels I ever offered for sale. Mating list free.

and the total reaches an amount almost beyond and above imagination.

* * *

This is not the last call, but show your birds. We have given you plenty of reasons before; follow this advice and begin now to let the world know what you have.

* * *

If Herman Schemmerhorn, Oscar Blaatz, August Schnitzelfeniger and Gotlieb Dinkelspeiler would form a partnership, what would be the firm name?

* * *

Link Orr has been very quiet (for him) of late. No doubt he is fomenting more of those good ideas. We hope it is not the question of Faverolle Toes that is in his crop.

A TIMELY SUGGESTION.

THE public is familiar with current authentic reports regarding the ravages wrought by the live stock hoof and mouth disease. Stock yards are being closed and quarantine orders are issued in numerous rural districts preventing the movement of live stock. This condition may continue for months until the scourge is stamped out. The Canadian government has issued quarantine orders against the importation of live stock into Canada. This condition seriously affects fanciers and breeders of high grade thoroughbred live stock throughout our vast country. This includes fancy cattle breeders, hog breeders, sheep breeders, horse breeders, etc.

Be it understood that fancy poultry has not and will not be included in the list of items prohibited to transportation.

To the prospective investor in some line of thoroughbred, fancy live stock the above is a timely suggestion. We are still doing business in fancy poultry and now is the psychological moment to remind him that an investment in fancy poultry will bring quicker and more returns for the amount invested than could possibly be obtained in an investment in fancy horses, cattle, sheep or hogs.

Suppose you invest $500 in a thoroughbred hackney mare. (This is a most conservative figure, based on the ruling values for hackneys.) Fifty dollars is added for service fee. A year elapses and you have a colt worth $100 up, depending on local demand. To keep the mare one year has cost you $100. Your $500 is still invested with no profit.

Suppose, on the other hand, that on this date you invest $500 in twenty-five fancy birds. That figures $25 each and depend on it that you can get some top-notchers for this money if you order five hundred dollars' worth from a reliable breeder. Among the twenty-five birds you can select enough show birds to make a heavy winning at one or more important shows. Within the year you will have bred enough stock from the twenty-five birds to yield you, on a conservative estimate, $2,000 in sale birds if you know how to grow birds as you should know how to properly handle the hackney mare and colt above referred to.

We will assume that $500 of the above $2,000 is spent in advertising and feed. Then we will deduct the $500 original cost of the twenty-five birds and we have left $1,000 clear.

The man with limited means can invest a less amount and reap proportionately like returns as against the wealthy purchaser of live stock who invests many times more and reaps proportionately many times less margin on his investment.—C. S. Byers, Hazelrigg, Ind.

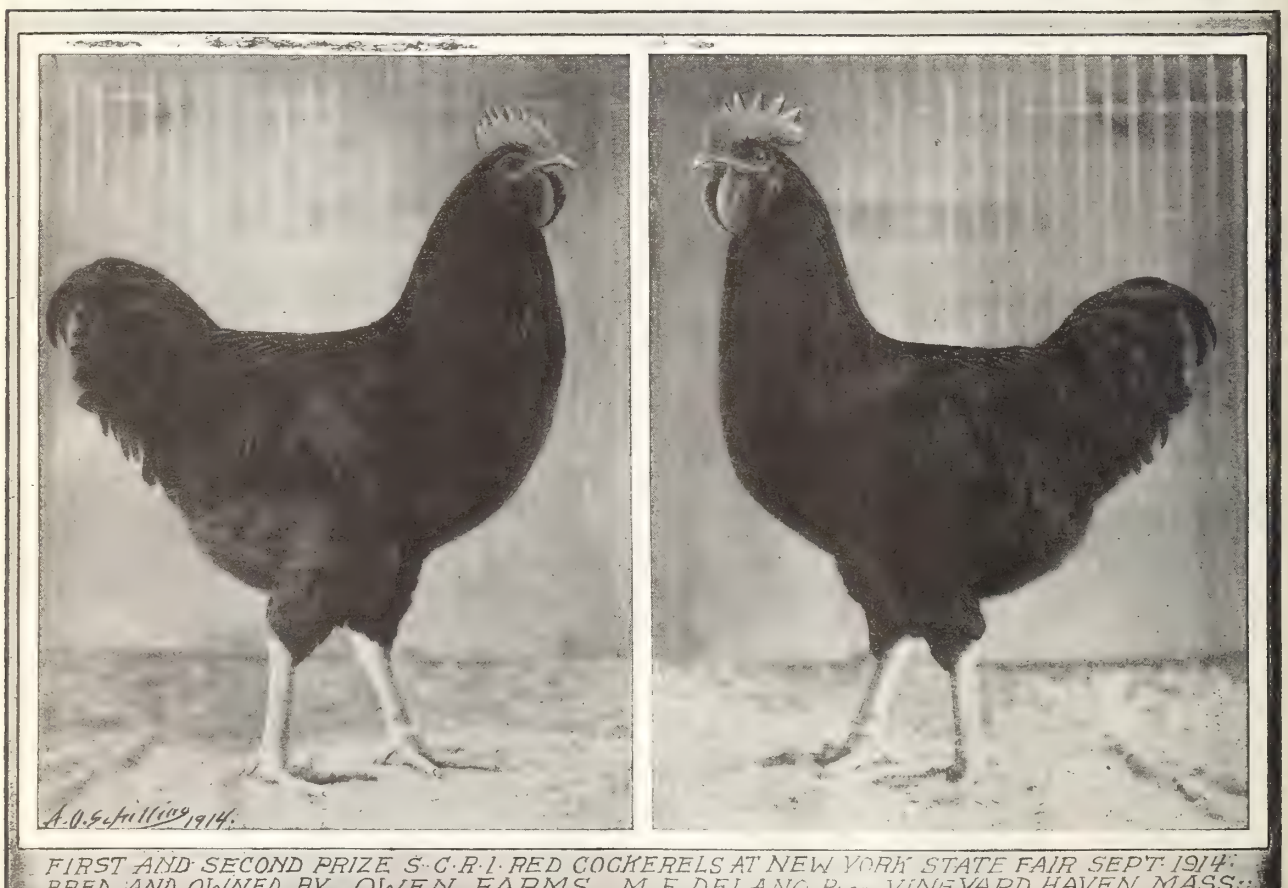
WOOLERY FARM Box A Bloomington, Indiana

Pacific Coast Department

Conducted by H H Collier, Tacoma, Washington.

MY friend, D. Tancred, who has trap nested White Leghorns for the last ten years, advances a new theory on early eggs being infertile. He says:



"It is not so well known, yet a fact, that a hen will often lay throughout her moulting period, but will invariably rest up a month after she has taken on her new plumage. It is hard on a fowl to have to make a new coat of feathers and when she has accomplished that purpose nature comes in and gives her a rest. I have noted that for years the eggs from my yards headed by cocks are more liable to be infertile during the months of January and February than at any other time during the year. After ten years' experience trap nesting I have come to the conclusion that it is not so much the female's fault as it is with cock birds. I seldom have low fertility when the cockerels are mated to hens, but eggs from the yards headed by cocks are generally infertile in January, and as a result I get my poor hatches at that time. I believe that if I should put cockerels in all yards during the month of January I would not have the trouble, for then the cock birds that moult late could get a period of rest that would help the fertility when they were heading the yards later in February and March. I have decided to keep an extra cock bird this season. I shall mark all of the eggs as they are laid, giving the number of the hen that laid them. I will set early a test hatch and when I note that the eggs of any hen are not running fertile I shall put her in a yard with a male by herself. If it be the hen's fault in fertility I will soon know it, and in that way save hundreds of eggs that are set each year that hatch no chicks."

In trap nesting hens one can do this, but where a man goes it blind he loses hundreds of eggs each year. Trap nesting the year round is a big task, but if the breeders would trap nest through the breeding season we would hear less of poor success with incubators than we do. Incubators get blamed for not hatching in the early part of the breeding season simply because they do not have fertile eggs.

There are hens in a flock that take a dislike to the male. One will often note that these hens will avoid the male bird altogether, and as a result they are never served. We go on setting these eggs and not getting a chick. This season I had a turkey hen that would not have anything to do with the gobler, and I discovered it too late to save her whole litter of eggs. I thought perhaps there was some reason for them not hatching, so continued to set them; all season I never hatched a turk from this hen despite the fact I set every one of her eggs.

One trouble we have in our heavy feathered breeds is the fact that the females get so fat that they can not be served by the male. I have found it a good idea to cut or pull away the fluffy feathers around the vents of such hens and have noticed that my eggs hatched better from that time on. Often the male is very heavily feathered; this is often so in Wyandottes and Plymouth Rocks. If one will pull away the feathers around the vent they can generally bring about fertile eggs.

The theory offered by Mr. Tancred is no doubt true. We begin to breed our male birds before they have regained their strength and vigor from a long moulting period. Take a Leghorn, for instance. They have about the longest sickles of any of our so-called utility breeds, and it must be a hard thing on their system to have to make so much feather in so short a time. I have noted that where a Leghorn was strong and

FIRST AND SECOND PRIZE S.C.R.I. RED COCKERELS AT NEW YORK STATE FAIR SEPT. 1914. BRED AND OWNED BY OWEN FARMS M F DELANO Prop. VINEYARD HAVEN MASS.

Made from retouched photos.

vigorous that he showed it in the way that he feathered. Take, for instance, the sickles and lesser sickles on a Leghorn. If you note this bird carries a strong tail; a tail that has its sickles hanging just right and the lesser sickles in their places; you can be sure that this bird has a pile of vigor and that he will get good results when it comes to hatching eggs. Where the sickle is inclined to lay down in the main tail feathers and the lesser sickles to hang down by the side of the tail like the tail coverts, it is a "cinch" that there is not much vigor to the bird. If you will watch the bird that is always busy in the yard, the one that comes dancing to meet you when you come in the yard, the bird that shows no fear when you are around, carries his feathers right where they should be, the eggs from the yard he is in hatch most every time.

Many people will write to a breeder and tell them that they want a breeding bird and do not care for show points. This is a paradox to me. I have found my best show specimens, my best breeders, and there is a reason. The ear lobe on my bird is a health barometer to me. Let one of my Plymouth Rocks get a light ear lobe or a pale comb and you will note that he is not up on his feet and coming when you go into the yard. Let his sickles drag to the side and he is either lacking in vigor or he is out of condition. Let a bird's plumage lose its luster outside of the moulting season and you can depend on it something is wrong with the bird. My most vigorous birds have been those that carried the heightened color that is called for in the show room. He is in his best condition when he fairly shines with that beautiful golden color in plumage that is so much prized in Buff Rocks. If his legs be pale it shows to me that he is out of condition and not feeling well. All of these things are what some so-called utility people are pleased to call "fuss and feathers."

A fowl that throws the color of its breed is more liable to be a good breeder than one that is off in color. If a bird is a good colored bird for the show room he is certainly a better bird for the breeding yard. There is too much talk of breeding and too little talk of the qualities that go to make a breeder. It is true that in the double mating system in Barred Rocks and Brown Leghorns along with Rhode Island Reds that we must breed differently in getting breeders from what we take to the show room, yet the birds that are the good breeders in that case must be strong in the color of their combs, faces, wattles and ear lobes, and should be strong in the color of their legs for best results. Both the breeder and the show bird should first of all show vigor, and without health no bird should be given a place in either a show room or breeding yard.

San Francisco will hold their annual show beginning the 8th day of December. The writer has been chosen to judge the American class. Secretary Talbott writes that he expects the largest entry ever seen in San Francisco, as many of the Coast breeders expect to try out their birds in preparation for the big Panama-Pacific Exposition that will come in November, 1915.

Do not forget that the Pacific coast expects to entertain the American Poultry Association at San Francisco's big fair next November. We expect to throw open our doors to the poultrymen who come as no other country ever did before. The Northwest poultrymen want all of the members to come by the northern routes, so that we can show them what a big country we have. It is the thing for the American Poultry Asso-

White Orpingtons

Superb Type and Superior Quality

January and February Hatched Youngsters for Sale

Never have I had young chicks prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These are ready for delivery now—large, vigorous, massive birds raised on acres of blue grass sod.

Older Stock at Bargain Prices

Due to the fact that I must make ready for this younger stock, it will be necessary to dispose of a number of hens and cocks on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock, the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000 acre Elmendorf Farm. An extra fine lot of young Duroc-Jersey pigs for sale.

THE MARTLING HENNERY, Box A, Ridgefeild, N. J.

ciation to do. The organization has not met on the Pacific coast since it amounted to anything. In the old days, so long ago that few remember it, the American Poultry Association met at Los Angeles, but they were so few in numbers that the meeting created very little stir; but if they will come out to the Coast a thousand strong, start out many of them from Chicago on a special train, then we will get an advertising that will put us on the map for all time to come.

Tacoma, Wash., will hold her twenty-first annual show this year, and it is going to be a big one. The Pacific coast division of the American Buff Rock Club has decided to hold its annual meeting at Tacoma and the Buff Rock class is expected to be the big thing of the show. Tacoma will double our already good prize if the Buff Rock men will come with a hundred birds. As we had seventy-four Buff Rocks at Tacoma last year, the association will be forced to double the money, as the hundred and more birds will be out.

All railroads have made a rate of one and a third fare from all points in Washington, Oregon, Idaho and British Columbia to the Tacoma show. The dates being December 29, 1914, to January 2, 1915. Secretary J. A. Caddey will be glad to send a premium list to anyone who will write for it.

Seattle holds its show late this year They have hired Fred Shellabarger to be their judge. The dates are about the middle of January. W. H. Haven, secretary, will be glad to give you all the information about the show.

William S. Russell, who is at present busy with the all the year show at the Panama-Pacific Exposition, will judge quite a few shows on the Coast this season. He will be at Tacoma and Aberdeen, Wash., Los Angeles and Sacramento, Cal., and other shows on the Coast. The dates of the Aberdeen show are December 23 to 26.

Colfax, Wash., will hold their annual show December 23 to 26, with the writer as judge. W. J. Scott, secretary, will send you a premium list if you will write him.

Bellingham, Wash., holds forth the 14th to 19th of December, with W. M Coats judge. M. Galloway is secretary

---

The following dates in California comprise the show season in the Golden State:

Modesta, December 2 to 5, 1914. A D. Roberts, secretary.

Pasadena, December 1 to 5. M. D Cartright, secretary.

Fresno, December 7 to 19. A. D. Marshall, secretary.

Coalinga, December 10 to 12. Charles Miller, secretary.

Porterville, December 15 to 17. Lucy Threlkeld, secretary.

Los Angeles, January 6 to 12. H. H. Mumford, secretary, South Pasadena.

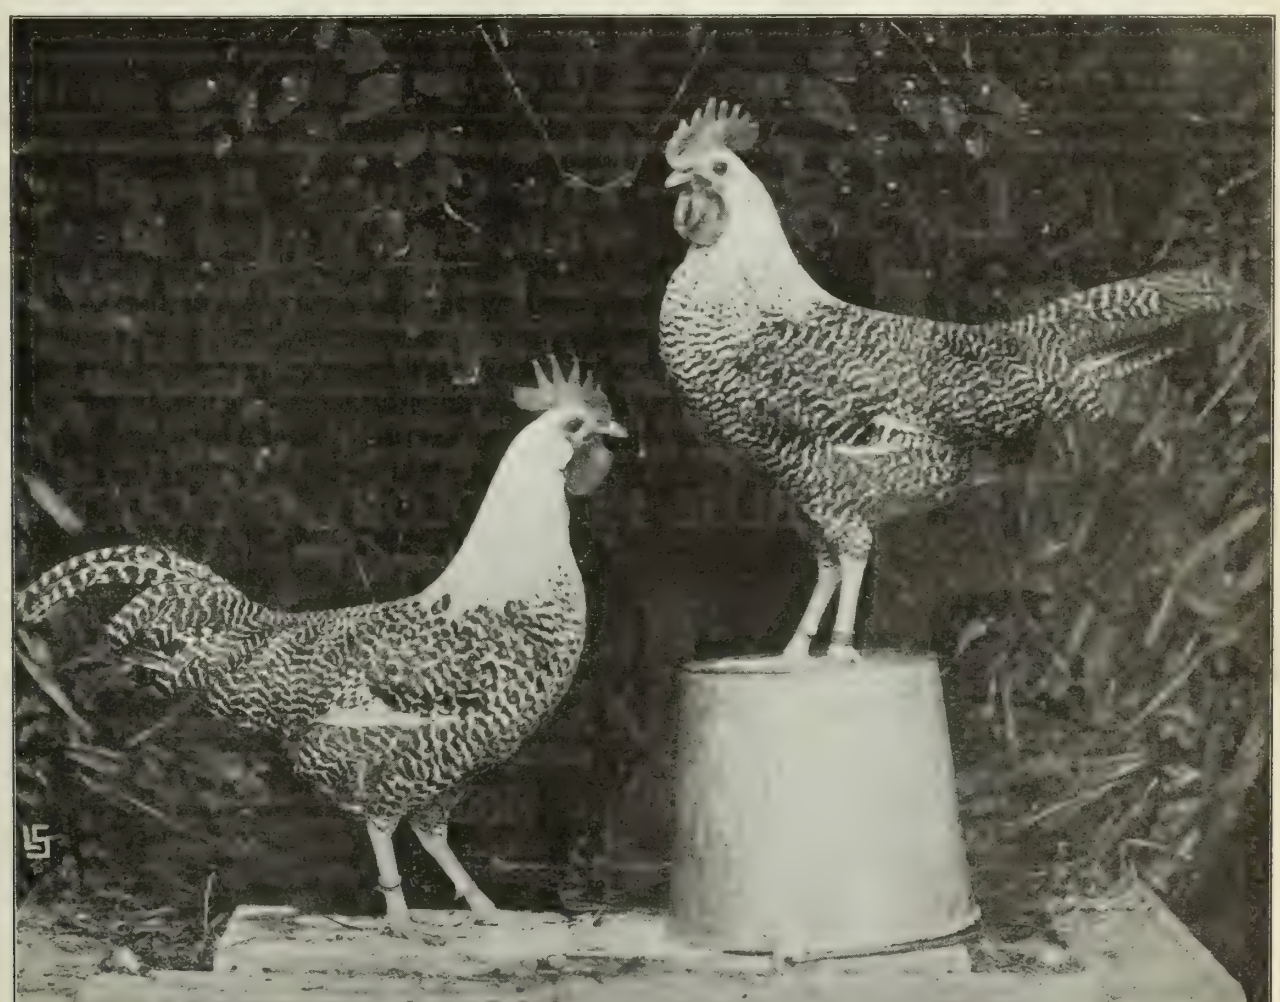
San Francisco, December 8 to 13. E J. Talbot, secretary.

A. F. Rolf, poultry husbandman, of the Oklahoma Agricultural and Mechanical College, at Stillwater, Okla., has resigned. Mr. Rolf will be located at Baton Rouge, La., with the Live Stock Extension Service of the U. S. Department of Agriculture.

THE VALUE OF UNRETOUCHED PHOTOGRAPHS.

BY FRANK E. HERING.

RECENTLY, I have read several communications that presented arguments for and against using unretouched photographs of poultry as agents for selling exhibition stock. As a breeder and dealer, I have some pretty strong convictions on this subject, which I wish very briefly to set forth. My point of view is a purely commercial one—the point of view of the buyer and seller. The only questions, then, that I need to consider are whether or not the unretouched photograph will sell more birds for the breeder than will the retouched photograph, and whether or not it will give to the buyer more satisfactory information concerning the stock he desires.



To start with an illustration: A breeder of standard bred poultry has stock that he wishes to sell. He desires to present the merits of his fowls to as many men interested in that particular breed or variety as he possibly can. He wishes, moreover, to emphasize as strongly as possible not only the blood lines of his strain—that is, the ability of the fowls to reproduce certain inherent qualities, such as constitutional vigor, egg-laying proclivities, and so on—but also certain physical characteristics that will appeal to the eye, such as type, station, head points, and feather coloring. Now the former attributes can best be presented to the prospective buyer by a description of the winnings of the strain, either in the hands of the breeder himself or of his clients. However, when it comes to acquainting possible customers with the *physical* merits of his fowls, the breeder must use *photographs* or *pictures*.

I make the distinction advisedly. A *photograph* is a relatively faithful likeness of a particular specimen. A *picture* is a likeness of that specimen with the crudities and defects eliminated, so that the physical characteristics of the fowl approach the ideal. In this distinction lies the debatable question with regard to poultry illustrations. In general, it may be said that retouched photographs prove of inestimable value to breeders whose fowls do not approach the standard requirements; for such photographs make the specimens seem stronger than they really are. On the other hand, breeders of the best stock have no need to ask the artist materially to change with brush or pencil a good photograph of their stock.

As a matter of fact, the practice of idealizing specimens is one that the honest poultry artist is opposed to, because it makes him accessory in deceiving the probable customers who examine his periodical and are influenced by its pictures. The most progressive editors of poultry and farm journals are vigorously opposed to retouching, because they feel that such pictured representations—or, better, misrepresentations—are not strictly honest.

And they are right. From an ethical point of view the practice of retouching poultry photographs is not justified. I believe that the purchaser who pays a round price for stock, either for breeding or exhibition purposes, should be protected before all others; for he is usually the innocent party to the transaction. Suppose, for example, that a man is purchasing in order to improve his strain. Perhaps he desires to strengthen the head points of his flock or to lengthen the backs of fowls, or to breed a type nearer the standard. If he is permitted to see *unretouched* photographs—photographs in which the fowl he contemplates buying has not been given physical characteristics that it does not really possess—he is able to determine just what breeder in the country has the stock that will strengthen his own.

As an illustration, let us assume that a man is interested either in Silver Campines or S. C. White Leghorns—varieties which are the specialty of The Willows Farm, of which I am the proprietor. I have been particularly desirous of pro-

The cockerels shown in this picture were absolutely as photographed. Note the pure white hackle, the beautiful, small comb; the clear-cut barring; the standard type, and especially the long tail feathers that are barred to the *very* end. "I believe that I have photographed on the Willows Farm *the two best Campine cockerels* it has *ever* been my fortune to examine. *The cockerel on the left in the photograph is, beyond question, the best male, everything considered, that I have ever seen.*"—Louis A. Stahmer, Poultry Artist, American Poultry Journal.

ducing in Campines white hackles with very little ticking; sickle feathers barred entirely to the end; type suggesting the Leghorn rather than the Minorca; and a comb smaller than the best specimen in the past has ever had. Now, as a result of careful selection and mating, I have succeeded in producing several cockerels, the very best of which appears at the left of the accompanying photograph.

Suppose there are other breeders who desire to strengthen either one or all of the points which I have sought to produce in my birds. They will have seen, as I have seen, many illustrations of fowls bred and exhibited by the leading Campine fanciers of America, that so nearly approach the ideal as to lead to the conviction that the artist (in all probability at the request of the breeder) has so retouched his photograph that even in a general way it is not a faithful likeness of the original. Such illustrations are most frequent on the advertising pages and in the reading matter of poultry publications. If the prospective dealer orders stock with these photographs as a basis he will be doing so largely on a guess. However, in the photograph of Campine cockerels here reproduced the artist's statement that it is absolutely unretouched serves as a guarantee to the buyer that the birds are as they are represented to be. He can decide from the illustration whether or not cockerels such as the ones shown will give to his stock the added strength that he desires; and if he orders birds he will be able to specify, for example, that he wishes a cockerel of the general type of the one in the photograph, but that he especially desires one with saddle and sickle feathers closely resembling those in the illustration, or with a white hackle similar to the one shown, even at the expense of other qualities.

It may readily be seen that from a business standpoint, as well as on an ethical basis, an unretouched photograph, such as the one here reproduced, that shows the fowl as it really is, is a much more satisfactory medium for bringing about a sale of stock than is a retouched photograph in which the defects of the cockerel have been either painted out or greatly minimized. Men are impressed much more quickly and forcibly by what they *see* than they are by what they merely *read* or *hear*. Fowls are usually described as being of a "grand" type, or as having a "fine" carriage or a "beautiful" head. Now probably no two people will receive exactly the same impression from such general and abstract terms as "beautiful" and "fine" and "grand." Consequently a purchaser can only be sure of getting what he wants if he sees it faithfully reproduced in an unretouched photograph. A picture idealized by the artist and supplemented with a few vague word descriptions by the breeder is unusually unreliable as a guide in buying stock.

Of course, retouched and idealized pictures are all right in their places; but I am convinced that their use as a medium for presenting stock to the buying public is both ethically weak and commercially unsound. I, personally, would far more readily give my order to a breeder who publishes an unretouched photograph of a fowl whose qualities I desire to introduce into my flock than to a breeder who prints a retouched picture that, perhaps, more nearly approaches the ideal standard. Experience gained through many disappointments has taught me that these idealized fowls, though fine to look upon, never existed in a "sure enough" poultry yard.

—o—

DID YOU WRITE US?

The old saying is, "Never start something you can't finish." Well, the first twenty days of November made us believe that we had.

No editorial that we have ever published has brought us so many letters as "What's Your Name." They came in daily by the hundreds—if yours was one of them and you did not receive a reply promptly, please accept our apology.

While we expected to hear from a great number, we didn't expect thousands of them, and it was somewhat of a task to answer them all promptly, but we are now in shape to write you upon receipt of your letter, so if you haven't written us—do it today. We want the name of every breeder of poultry in the world. Address your letter or postal, Managing Editor, 1915 American Poultry Year Book, 542 S. Dearborn St., Chicago, Ill.

Current News of the Poultry World

by J. F. Shureman

Col. H. C. Trexler, well known poultryman and owner of a large and successful poultry plant at Cetronia, Pa., is establishing a second plant at Lowhill, with buildings to accommodate 5,000 laying hens, all S. C. White Leghorns. Col. Trexler has met with remarkable success at his Cetronia plant, where he is installing a 6,000-egg incubator. He expects to establish a third plant at some convenient point in the spring.

Prof. H. R. Lewis, husbandman of the New Jersey Experimental Station and recognized as one of the foremost authorities on pure-bred poultry in this country, is urging the poultrymen of New Jersey to organize a state association for the promotion of the industry and is meeting with much encouragement.

Dr. W. A. Bell, formerly of Toledo, Ohio, but for the past fifteen years a resident of Toronto and Winnipeg, Canada, passed away at his home in the latter city on October 13. Mr. Bell took a great interest in the poultry industry and while a resident of Toledo was one of the promoters of the Toledo poultry show. He was 52 years of age.

Judge W. S. Russell, of Ottumwa, Iowa, has been appointed superintendent of the display and sales department of poultry at the Panama-Pacific Exposition. This department of the poultry show at the big fair will have a continuous display of the various breeds and varieties of poultry during the entire period of the exposition.

The Department of Poultry Husbandry of the New York State College of Agriculture is carrying on an active campaign to assist the poultrymen of the state in culling their layers for winter egg production and in selecting breeding stock. Several members of the staff of the Department of Poultry Husbandry are visiting poultrymen in various sections of the state to give instruction in grading the stock. The work is done without charge except for hotel and traveling expenses.

When John W. Ward, Jr., the famous importer and breeder of Dark Cornish fowl, opened his shipping coops at the recent Allentown, Pa., fair, he found eight of his finest birds dead, including the two cocks, "Uncle Sam" and "John Bull," birds that cost him $700 each in England a few months ago.

A strange disease, resembling limberneck, has attacked the fowls in the Cumberland valley in Pennsylvania, resulting in the loss in some instances of entire flocks.

The Missouri State Poultry Association, the largest state organization of its kind in the United States, with a membership of a few more than 4,000 poultry breeders and farmers, has inaugurated a campaign to increase the membership to 4,500 by Thanksgiving week.

Damage to the amount of $10,000 was done by fire of mysterious origin at the Stouffer Duck Farm, near White Hill, Pa., one night recently. A grain storage house, boiler house and other buildings were destroyed. Although there were thousands of ducks on the farm, comparatively few were burned.

F. M. Grant, recently of California, is preparing to establish a large poultry and squab farm near Tucson, Arizona. He is an experienced poultryman and will engage in the business on an extensive scale.

Messrs. Briggs, Dodson and Gilmore, owners of the famous Pittsfield Poultry Farms in Maine and a branch plant in Massachusetts, are making plans to increase their output next year to 2,000,000 chicks.

Owing to the high cost of feed, the duck growers of Long Island will lose money this year, according to report.

The Massachusetts State Poultry Association, which has been in existence four or five years, has been dissolved, and to take its place the Massachusetts Poultry Association, Incorporated, has been organized. All members of the old association become members of the new organization automatically and its membership to start with is about 400. The

Smith's S. C. Buff Leghorns

The Largest Exclusive Breeder of Buffs in the World.

I have no other breeds. They are the world's best layers when eggs are high, and winners at thirteen of the largest shows. Eggs, Chicks, Breeding Stock and Show Birds by the thousands. If you want to win at the big shows send me your order and I will please you. Send ten cents for catalogue and find out how to raise 150 pullets to six months of age, for 15½ cents each.

F. S. SMITH Life Member A. P. A. and Life Member Single Comb Buff Leghorn Club **Box C and D, HAMILTON, O.**

First Cockerel, Chicago, 1913

Parmenter's S. C. White Leghorns

are the kind you will buy when you wish the best. They can easily prove their claim to being the best by their magnificent show record at the great Chicago Coliseum Show, where in the largest and best Leghorn class ever assembled in the West, they won as follows:

Special for Best Colored Male
1st, 3d, 4th, and 5th Cock
1st, 3d and 4th Cockerel
1st and 3d Hen
1st Old Pen

1st Young Pen
Special for Best Shaped Male
$50 Silver Cup for Best Display
Running four times as many points as nearest competitor.

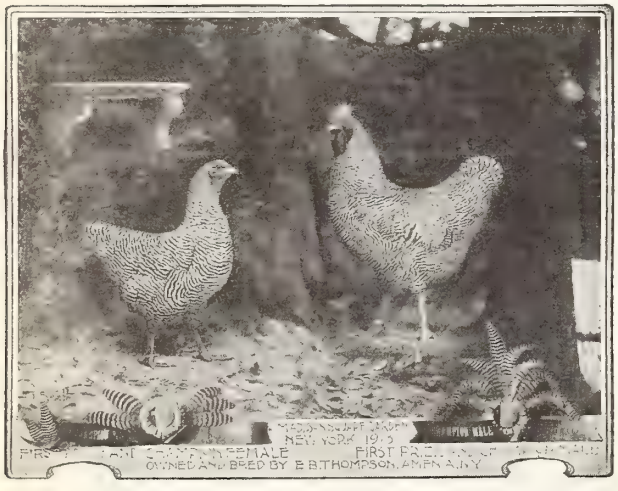
$10.00 Gold Special for Best Display
Swiss Gold Watch for Best Exhibit
And Sweepstakes

Right now I have about four hundred of the best birds I ever raised. They have the type that is recognized as correct by leading judges in America. They have an inherited power of egg production which they exercise throughout the whole year. I can furnish winners that will set the pace at any show and will sell at prices that will move them quick. Write me at once for what you need in White Leghorns. Satisfaction absolutely guaranteed.

ROBERT PARMENTER **KNOXVILLE, ILLINOIS**

officers, who are also the incorporators, are as follows: President, C. L. Wilder, Lancaster; first vice-president, Prof. J. C. Graham, Amherst; second vice-president, W. E. Blodgett, Springfield; treasurer, F. A. Hannaford, South Lancaster; temporary secretary, Clifton W. Whitney, Boston.

Students of the Agricultural and Mechanical College at College Station, Tex., are to study poultry culture. More technical phases of the poultry industry will be taught only those seniors in the animal husbandry department who select such a course, but a practical, broad-gauged course in the breeding, feeding and general management of poultry and the production and marketing of eggs will be given every student in the college.



Prof. J. C. Linton, of the Michigan Agricultural College, sees a great opportunity for the poultrymen of this country as a result of the situation brought about by the European war. He urges poultrymen to increase their flocks, for he believes higher prices and greater demand for American chickens and eggs are certain to come because of the check placed upon the poultry business in Europe by the great conflict.

Leonard Ott, of Prophetstown, Ill., reports the banner pullet for 1914. She was hatched January 1 of the present year and is now running with her second brood of chicks hatched from her own eggs. Before she was six months old she had weaned her first brood of chicks.

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Are the Greatest Achievement in Modern Barred Rock Breeding. They Are the Product of Over Thirty Years' Skill.

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Early Winning Show Birds

I now offer the finest early hatched exhibition birds I have ever produced—grand size and shape, fine heads, even clear blue color, and narrow clean cut vivid barring to the skin. They are matchless and ready to win prizes for you in any competition in the world. The prices are very reasonable.

My Imperial "Ringlet" Barred Rocks have demonstrated to all the world a distinctive superiority—they stand without a rival as the leading first prize winners at America's Imperial Show, Madison Square Garden, New York.

A Great Light on the Subject of New York Records

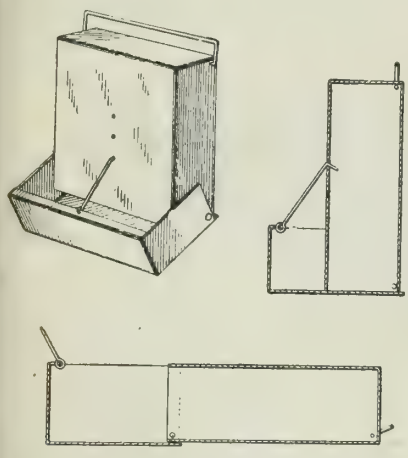
The Imperial "Ringlets," exhibited by me personally, have won at New York a grand total of **32 first prizes**—this is more than double the number ever won by any competitor—no other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the New York show—**mark the difference. Furthermore**—I am the only living Barred Rock breeder who has ever won all the regular and special prizes on pullets at a single New York Show, viz: **1st, 2d, 3d, 4th and 5th;** all the regular and special prizes on cockerels, viz: **1st, 2d, 3d, 4th and 5th** at one show; both Sweepstakes Champion Male and Sweepstakes Champion Female at one and the same show in Madison Square Garden.

These prizes mean something—they sweep away at one stroke all doubts and settle the question of the world's leadership.

(See my ad on back cover page for wonderful record at last winter's Madison Square Garden, 1913-14, Show. This achievement takes rank in history as the most wonderful ever recorded on Barred Rocks since the N. Y. Show was founded.)

If you want to win and breed winners you must have my Imperial "Ringlets"—the best is none too good for my customers. I will sell you grand exhibition birds for any show, and breeders of this richest first prize New York blood in elegant single birds, and trios and pens mated to produce winners.

Richly illustrated 70-page catalogue upon application—it is full of pictures of New York winners from life.



See my other ad on back cover page.

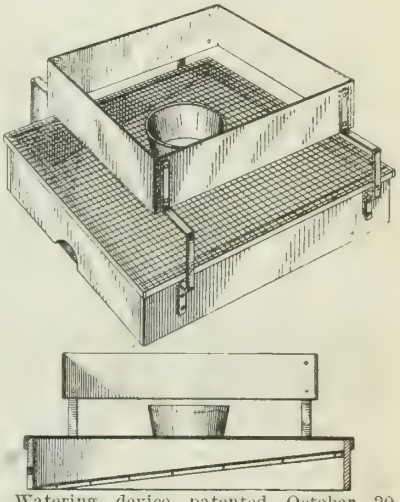
Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

A Poultry Feeder, invented by Michael Wm. Lawlor, Needham Heights, Mass., has a novel pivoted trough into which the feed may flow from the open bottom of the body of the feeder. A hook carried by the front part of the trough is adapted to engage with the body of the feeder to hold the pivoted trough at such downwardly inclined position as will facilitate the downflow of grain into the trough from which the poultry feed. To fill the feeder the trough is swung down into alignment with the body of the feeder, so that feed may readily be poured in through the open bottom. The feeder may be hung against a wall. A half interest in the patent is owned by the Ideal Can Company, Inc., Boston, Mass. Patent No. 1,114,892.



Poultry Feeder patented Oct. 27, 1914, by Michael W. Lawler, Needham Heights, Mass. No. 1,114,892.

William A. Brandt, Healdsburg, Cal., is the inventor of an Egg Washing and Rinsing Machine. It scrubs the eggs and simultaneously applies water and washing powder to them; then automatically drops successive eggs into a rinsing tank, and finally conducts the eggs out of the rinsing tank upon a drying table. Co-operating brushes hold the eggs, the brushes being intermittently separated. The various devices are timed to insure their co-operation in properly carrying out the desired function. Patent No. 1,113,190.

An Electric Incubator, invented by Eugene F. A. Carey, Missoula, Mont., has novel means for maintaining an even temperature within the incubator. It is reported to have produced excellent hatches last season. It has three electrical circuits utilized for heating purposes. The first circuit raises the temperature nearly to the incubating point, whereupon a thermostat connects up a second circuit and under ordinary conditions retains the egg chamber at the incubating chamber. Any sudden increase in electric current will operate a thermostat, which connects a third circuit, the resistance of which combined with the first two will lower the temperature to the proper incubating point. Electrical connections, including a push button, connects lamps in the second circuit directly with the supply terminal of the first circuit for putting full voltage across the terminals of the lamps when it is desired to illuminate the interior of the incubator. Patent 1,113,955.

Howard Elwood Hoyle, Whittier, Iowa, is the inventor of a Poultry Watering Device. It is designed with the object of preventing ducks from splashing water around the vessel in which they bathe, the vessel being provided with a novel catch basin and guard, as shown. It comprises an open frame, a catch basin

Watering device patented October 20, 1914, by Howard Elwood Hoyle, Whittier, Iowa. No. 1,114,264.

Wisconsin Wins In Big Hatching Contests Every Year

130 Egg Incubator
130 Chick Brooder
BOTH For $10 Freight Paid East of Rockies

1910	1911	1912	1913	1914
Mrs. J. L. Mahon, Veedersburg, Ind., in 1910 won in Missouri Valley Farmer Hatching contest, hatching 425 chicks from 126 eggs.	Mr. C. B. Armitage, Atwater, Ohio, in 1911 won in Successful Farming contest, getting 181 chicks from 151 eggs in two batches.	Mrs. J. W. Mize Vaughns Mill, Ky., in 1912 won in Successful Farming contest getting 206 chicks from 209 eggs in two settings.	Mrs. F. H. Lewis, Montrose, Pa., in 1913 won it Successful Farming contest getting 96 chicks from 96 eggs in one setting.	Mr. C. C. Rich, Russiaville, Ind., won in 1914 Successful Farming Hatching contest getting 94 chicks from 94 eggs—the first hatch he ever made with incubator.

Think of it! You Can have a Pair of These Famous Prize Winners for Only $10—Freight Paid East of the Rockies or 180 Egg Incubator Chick Brooder Both $12

Wisconsins have hot water heat, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating, Nursery under tray. Incubator and Brooder shipped complete with thermometers, lamps, egg testers, all set up, ready to use when you get them. Incubators finished in their natural color showing the high grade California Redwood lumber we use—not painted to cover up cheap material. If you will send for our catalog we will gladly send you a sample of the material, then you can compare it with the kind others use. Be sure to find out what material an incubator is made of before you buy. If you will do this we know you will order a Wisconsin. Machines shipped on 30 days trial. Money back if not satisfied. **Wisconsin Incubator Co., Box 54, Racine, Wis.**

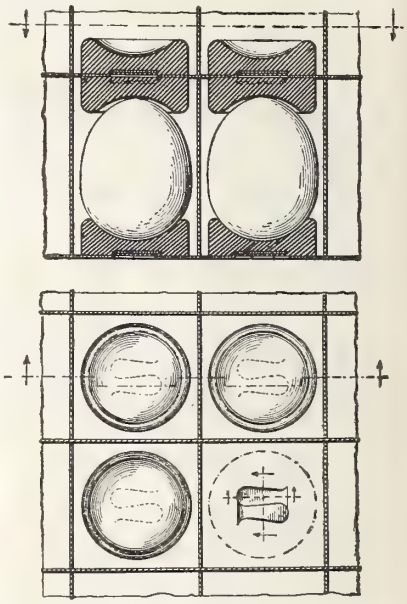
inside the frame, a support for a water vessel mounted over the top of the frame and an inclosing shield carried by the frame. The shield is spaced at the bottom from the top of the frame. Patent 1,114,264.

A Watering Device for Poultry and Animals is the invention of Charles C. Driscoll. It is primarily intended for watering fowls or livestock during transportation. It comprises an elongated hollow tank having an open-ended tube arranged in an upright position with its lower end dipping into the water in the tank, the tank being closed throughout its length except for the vertical tube, a normally closed air-valve in the top wall of the tank, and supports for the tank. The tank is supported so as to be free to swing on a horizontal axis located above its center of gravity to automatic



Watering device, patented October 13, 1914, by Charles C. Driscoll. No. 1,113,206.

ally right itself when swung out of normal position. Patent 1,113,206.

A new Egg Crate has been patented by Claris H. Arnold, Eaton Rapids, Mich. Novel cushioned egg retainers are employed for each cell, as illustrated. In the packing operation, a bottom plate is disposed on the flooring of the casing. The retainers are then secured to it. Fillers are then put into the casing, each cell holding one of the retainers. Eggs are placed endwise within the cells, with their ends resting in the concave portion of the retainer cushions. A second plate, carrying oppositely disposed retainer cushions, is then placed upon the upper edges of the filler. The inverted retain

Egg crate patented October 27, 1914, by Claris H. Arnold, Eaton Rapids, Mich. No. 1,115,270.

ers enter the filler cells and engage the free ends of the eggs, while the retainers disposed in an upright position act as supports for the succeeding series of eggs. Patent 1,115,270.

TIMELY POULTRY TOPICS.

BY PLUMMER M'CULLOUGH.

We are glad to see that Mr. Fishel was re-elected treasurer of the A. P. A., as we believe he is better fitted for the position than the average breeder. He has done a lot of good work for the poultry industry and we need more of his stripe.

In the R. P. J. many of the leading breeders and advertisers are expressing their opinion regarding the retouching of photographs of fowls and most of them are not in favor it. A few have no objection to the artist touching up the background, etc., but do not think an artist has a right to "make over" the complete photograph. We have always been opposed to this retouching business because it is I am afraid making the birds appear better than they really are. Of course we have no objections to an artist getting all the good points out of the bird that he can, but we do not believe that an artist has any right to put a good comb on a bird when the bird has a poor comb. We don't think it right for an artist to make a bird full in breast when the bird is really too flat in breast. These are the things that I am opposed to and every honest breeder should be opposed to them. I don't believe, however, that our leading artists do anything dishonest along this line and I hope all poultry artists will follow their example.

"HOY."

S. C. White Leghorn. Undefeated Champion. Winner of ten blues at such shows as Albany and Schenectady. Bred and owned by Bump & Donnan, Box 625, Cambridge, N. Y. Made from retouched photo.

In the *Poultry Fancier* a lady in writing about Indian Runner ducks says: "It is not absolutely necessary to have a pond of water where Indian Runner ducks are raised. They will prosper and be very happy with shallow vessels kept sanitary and filled three or four times a day; but a stream of water is very advantageous to a flock and a great labor saver, also their dexterous swimming keeps the plumage in fine condition and increases the egg yield fifty per cent." Really, friends, if running water increases the egg yield fifty per cent I should think it very necessary. Wouldn't you? If a person had a very large number of laying runners and an increase in egg production of fifty per cent would mean a good many extra dollars in our pockets, and you know we all need the dollars.

We had a letter from a man a few weeks ago who wanted to buy a Collie dog and he proposed coming some Sunday and see what we had to offer. We promptly wrote him and told him as politely as we could that he was welcome to come any week day but to *please* not come on Sunday. We never heard from him again and in fact I didn't expect to. Now was this man offended because we asked him to come during the week? If he was he ought to be. No man has any right to expect to do business on the Sabbath day. If he can't go some week day and see the stock that he wants to see I would advise him to send in his order and have the breeder ship what he wants. If he can't do this or is not willing to do it he had better drop the matter. Every one should remember that the average poultryman likes to have a little time and rest on the Sabbath day without being molested with callers.

I note in the November number of this good old Journal that Mr. St. John seems to think that I am a little wide of the mark when I said that I believe the birds with down between their toes should be disqualified. Well, maybe I am a little feeble-minded, and I am always glad to have my good friends show me where I am off. However, I am not ready to give in on this matter yet. Mr. St. John says: "The 1910 Standard under the head of 'General Disqualifications' says, 'feathers, stubs ... down *on* shanks, feet or toes of clean

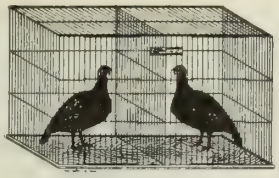
STANDARD ROCK FARM



TRUCKENBROD BROS. MENDOTA, ILL.

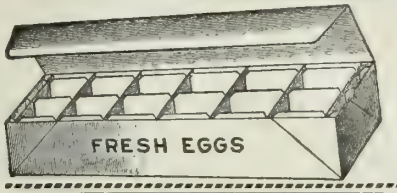
shanked varieties' shall be a disqualification. But under 'Cutting for Defects' it plainly says that down *between* the toes of all clean shanked varieties shall be cut from ½ to 2 points.'' Now, I will thank the gentleman very much if he will show me in some way where in our 1910 Standard under the heading of ''Cutting for Defects'' it plainly says ''down between the toes of all cleaned shanked varieties shall be cut from ½ to 2 points.'' The fact of the matter is, Mr. St. John, it is not in our 1910 Standard. That was the way it was in the old 1905 Standard, but not so in our present Standard. At least I cannot find anywhere in the cutting for defects where it says anything about the cutting down between the toes and if it does in Mr. St. John's, his Standard must have an extra chapter or two more than mine. I will admit that I believe the Standard makers made a mistake when they made down between the toes a disqualification, but they made it just the same and according to the Standard it is just as much a disqualification as a side sprig on comb or any other disqualification, and there is no use getting around it. Mr. St. John says he cannot see where a judge is justified in disqualifying a bird for this defect. Then I suppose we are not justified in trying to follow the Standard? If the Standard was not made for judges to follow, what was it made for? I don't believe any judge has any right to set up a Standard of his own no matter what he may think along certain lines. If all our judges would put all their pet ideas into practice in the show room we would have a regular mess of it. For instance I always thought it unfair for a Rock to be disqualified for positive white in ear lobes and let all other American varieties pass without disqualifying for this defect. I claim that I would have just as much right to give a first prize to a Rock with white in lobes as you have giving it to a bird with down between the toes I have just as much right to give a first prize to a bird with a little bit of side sprig hardly noticeable as you have to give it to a bird with down between the toes. Both are disqualifications, for the Standard says so. Isn't that enough? When a judge is hired to place the awards he is hired to judge according to the Standard and not to put some of his own pet notions into practice. If he fails to do this he is simply ignoring the Standard and setting up a standard of his own. I think the best way to get a disqualification like this removed from the Standard is to go to work and have the A. P. A. remove it from their next Standard instead of simply ignoring this disqualification because it does not suit your taste. I agree with Mr. St. John that the English people are ahead of us in some particulars. They pay less attention to these minor defects, but I believe our birds are bred down to a finer state of perfection than theirs are. I want to assure Mr. St. John that I am glad he brought this matter up, as it is by knowing each other's opinions that we can plan for a future Standard that will be nearer what we want.

We read with interest Dr. Woods' notes on White Faverolles in last month's Journal and we note that he says that his flock is developing slower than either his Rocks or Reds. He also mentions that they do not seem to have the constitutional vigor that our yellow skinned birds have. While we have not had any personal experience with White

Faverolles I notice that the Doctor's experiments do not agree with many of the breeders who are breeding this variety. *American Poultry World* makes mention of one individual that had almost grown and developed to twice the weight of a Plymouth Rock hatched on the same day. Of course this alone is saying nothing. We have no assurance whether the Plymouth Rock and White Faverolle in question had exactly the same care and housing. Whether they both were fed exactly alike and whether they were both bred from strong, healthy parents. All these things must be taken into consideration and I believe as a rule they have more to do with the growth and development of young stock than the breed or variety itself. I believe, however, that Dr. Woods is giving his readers straight facts in his writings and as he is not partial to any one breed or variety I take great interest in reading his articles and notes.

In the *American Poultry Advocate* we find the following in an editorial: "Poultry keeping as a side line, on a small or moderate scale, offers a golden opportunity for many, many thousands of these men and women. There is no other opening which can be compared with it. We may be sure, therefore, that great numbers—a greater number than ever before—will take up poultry keeping for occupation and for profit during the winter and spring of 1914-1915. Of this outcome we have no doubt. A few months will show whether or not our belief is correct." There is no doubt that many new recruits will be added to the ranks. Many of them will do the poultry industry no good, or themselves either, unless it is to learn that they cannot get rich quick by jumping into the poultry business. It is surprising to see how many of the city people are coming out to farms. We have several real estate agents in this vicinity and all of them seem to be prospering in selling city men farms at a big price, as a rule. I believe it is all right for the city man to want to get out to the country if he wants to, but I surely think they are going at it in the wrong way. Nearly all of them insist on buying a farm. Would it not be a much safer method for them to go and rent a farm for a year or two first and see how they liked farming and farm life? If they did not like it at the end of a year or two they could go back and would be out very little money. On the other hand, if they buy they often pay too much in the first place and then they have a hard time selling without losing money. We have a lot of city men who have come out on farms in this community and I only know of one that has made a success of farming. In fact I can hardly say he has yet as he has only been on his farm for a little less than a year. However, this fellow is not afraid of work and has raised good crops the past season. We know of one of the best farms in this country, a farm of 170 acres, that was sold to a city man about five years ago. This man was a good fellow but he knew no more about farming than I do about flying an aeroplane, and that is very little, I assure you. He was very enthusiastic over the prospects of his poultry business and built two large houses that cost him more than he ever got out of them and invested a lot of good money in stock and appliances when he hardly knew how to set a hen. This man paid $10,000.00 for this farm and

SENT BY PARCEL POST



Let us show you how we can send you these wonderful coops by **Parcel Post, Delivered** to your home for less money than you can purchase coops of inferior quality in your city.

We also make a specialty of benching shows on a rental or we will sell you the entire outfit. In any event get our prices and terms before placing your order. We can please you and save you money. Write for catalog.

Coatesville, Pennsylvania

Western Branch: 175 W. Jackson Boulevard, Chicago, Illinois

he was glad to sell it in about three years' time, and while I don't know what he got for it, I do know that he did not get as rich as he expected to. The man to whom he sold it to was a city man also and had a large meat market in the city. I was told yesterday that he was sore of his bargain before two months. He surely did not make anything and I don't know how much he lost. He was also glad to get rid of it on most any kind of a deal and he sold and traded it together for a meat market back in the city. The man that now has it is also a city man and I will make a guess that he will not be there more than a year or two. Now, I can't see for the life of me why any city man wants to come out to the country and invest ten or twelve thousand dollars in a farm and stock before he knows even how to plow a furrow. I think every person who knows nothing of farming should rent some small farm and try keeping poultry on a small scale first. If they like it well enough after a couple of years to stay, then they can buy, but I believe most of them would not buy. If they must buy a farm instead of renting, why do they not buy some small place of thirty or forty acres instead of a large farm where it takes an investment of ten or twelve thousand dollars. They can get all the farming they usually want on a small farm. Because a man has been a successful business man in the city is not saying that he can be just as successful on a farm with no experience. One of the men who bought the large farm which I mentioned did not want any of his city friends to see him with his old clothes on. This was very amusing to others who were not so particular about such matters. You know farmers cannot wear a white collar all the time. This man never had to buy a farm and go in debt for it and if he had he would never got out. He never went through the period where you have to wear patched overalls and have twine for shoe strings. Possibly he could not of stood such things but I want to tell you that I would rather live on a farm with all its disadvantages than to live in the city and be stuffed up between four brick walls with hardly breathing room.

Mr. Platt in his article in R. P. J. on Judging says regarding the scales of points for the different varieties that he does not believe there is a judge in America who can run those scale of points. Well, I believe Mr. Platt is about right and I also believe that most of them have proven this fact.

In the *Poultry Item* Rev. G. R. Smith says, "There are hens and hens. There is as big a difference in the laying capacity of hens as there is in the thinking capacity of men." Well, if that be true, we will all have to admit that there is "some" difference.

In the same journal an inquirer asks, "Which is the best line breeding or out breeding and what system is best to follow?" Editor Cornman answers as follows: "Line breeding, if you wish to produce high class show birds, and would advise you following the I. K. Felch system." While the advice given is no doubt correct, still I will bet it will not be carried out. We have never heard any one find any fault with the Felch system of line breeding, but I have never met a breeder who has claimed to follow it clear through. I doubt very much

if any of our leading breeders are doing this today. If it is the right thing to do, why is it not followed more than it is?

We are glad to see that the Penciled Runners are now admitted to the Standard. There was no reason under the sun why they should not be and I believe they will now become more popular than ever. There is one thing that amateurs must learn about Runners, however, and that is that they are not going to shell out eggs by the hundred unless they are properly housed, watered and fed. It is true that they are great egg producers all right, but it is also true that it takes feed to make eggs in ducks as well as in chickens. It is also true that if you fail to do your part you will be disappointed in Runners. That is saying nothing whatever against the breed, as I am a great admirer of them and I know they can produce the eggs if you give them the material to produce them with, but it is up to you just as much as it is to the ducks. Don't forget this.

I see more and more every time I enter a show room how much condition has to do with the placing of the awards. I tell you, friends, no matter how good a bird you have, if you fail to have in A No. 1 condition you will lose out to an inferior bird that is in good condition. A bird must be in good flesh, healthy, vigorous, clean and full of snap or he will not be placed where he really belongs. I remember a judge at a local show a couple of years ago who simply would not give a second look at a white bird that was not washed. He said he was judging fowls and not dirt. While his position did not look reasonable to many, still it goes to show that the judges think a bird must be in proper condition and it is up to the exhibitors to do all they can to help put their birds in such condition.

We wish every reader of the AMERICAN POULTRY JOURNAL a Merry Christmas and a Happy New Year. I certainly enjoy looking over and reading the AMERICAN each month and I read it pretty thoroughly, too. About the first thing I read is the editorials and then Dr. Woods' notes and comments, then Mr. Schwab's Chick Chats. I even take pleasure in reading many of the advertisements. I hope that all our readers like AMERICAN POULTRY JOURNAL fully as well as I do. So again I wish the AMERICAN POULTRY JOURNAL and its entire staff and all its readers a Merry Christmas and a Happy New Year.

RAISE EVERY CHICK on "HEN-E-TA" "HEN-O-LA" The *Phosphatic*-System!

The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.

The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.

Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*

HENETA BONE CO., Dept. 1, Newark, N. J.

A NEW METHOD OF SELLING

A modern selling system—absolute recording of every sale on record sheets, enables poultrymen to keep track of the quality of birds sold. System is based on "unit" principles and will make uniform charging of prices a possibility. A judge's record card for comparison shows. Understood by amateur and professional exhibitors. Better than the score card system.—Copyright 1914 by Louis A. Stahmer.

THE most unsatisfactory part of the poultry business is the selling end of it. It is easier to raise to maturity a fine flock of fowls than it is to obtain a good price for them. Getting the price the birds are worth is one of the problems of the thoroughbred poultry business. The producer is either not giving enough value for the money received or he is cheating himself by giving too much and, on the other hand, the purchaser either thinks he is overcharged and calls the poultry business a delusion and a snare, or he lauds the seller to the sky for giving him better value than expected. The most kicking, and in many cases it is fully justified, is done by the buyer who orders stock for a second time from a breeder and does not get the value he got with his first purchase.

After an observation of these conditions for many years, we have come to the conclusion that if a system could be devised to fix a uniform value on the quality of a breeder's flock, a lot of this dissatisfaction would be done away with. The more we thought of this subject the greater became the desire to help the producer and after spending considerable time studying the subject, we have devised a system which we believe will fill the bill to the entire satisfaction and offer the same to the poultry breeders of the world with the hope of its general adoption.

Before going into the subject any further we will explain our selling-record sheets. (See illustration.) It will be noted that we have divided the sheet into two parts, one for recording the shape and the other the color. Each part is again divided into different sections giving a description of the defects such as are liable to occur. In expressing the quality of each section we have adopted the following words, "Excellent," with a numerical value of 5; "Good," with a numerical value of 4; "Fair," with a numerical value of 3; "Medium," with a numerical value of 2, and "Poor," with a numerical value of 1. The record sheets are self-explanatory, as will be seen by the illustration and any one will be able to fill them out in the proper manner. A carbon copy is kept for future reference, thus giving the seller an accurate record of former sales.

The principle of our system is the application of a uniform price for every unit of quality, and all that is necessary to use the system is, first of all, that the breeder must establish his "unit" price. Believing that every poultry breeder has at least one bird on the place which he knows will satisfy the purchaser for the money, we will use this bird as a price-maker for his entire flock.

Let us assume that John Smith has a bird which he has either bought for $5 and is absolutely satisfied with his bargain, or that he has a bird for sale which he knows will give satisfaction for this amount of money. He now takes this bird and scores it in accordance with the record sheet section by section making a check mark in the explanatory part and also under the heading under which it belongs (excellent, good, fair, etc.). Adding up the total in each column, he finds that this particular bird has 8 checks for "excellent," 10 checks for "good," 7 checks for "fair" and I check for "poor." As each check under "excellent has a value of 5, each check under "good" a value of 4 and each check under "fair" a value of 3, the totals add up to 101. As the bird also has one check under "poor," he deducts 1 from the total. As "poor" cannot be considered a qualification, he therefore deducts it from the total, thus giving the bird a total of 100 units. Dividing $5 by this number gives him the unit value for his entire flock, and all that will be necessary for future sales is to take any bird, score it according to the record sheets and multiply the total by the accepted unit value. Birds of different qualities will naturally show a greater or lesser number of units. As a carbon record is kept of each sale, the producer will at all times know what kind of a bird he sold a customer before, as the record will show every defect and quality for each section, and it stands to reason, therefore, that every sale will give satisfaction, providing the producer sticks to his unit value and does not change it.

If a breeder's flock continues to show marked improvements in color and shape the records will naturally show a greater number checks for "excellent" or "good" and the value of the bird will, therefore, be greater. The breeder who has bred a certain variety for years and whose flock has become known for certain characteristics such as excellent head points, low tail carriage or color

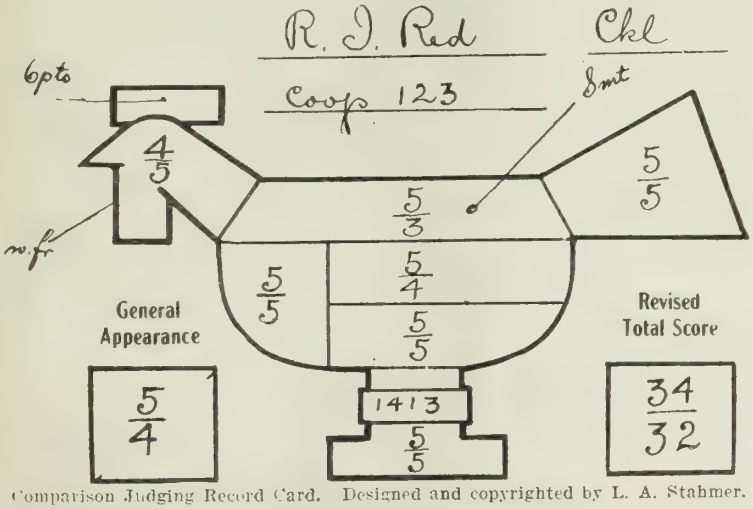
No. Quality Units ..... *100* Value of bird *$5.00*

Quotation to ..... *John Brown*



Answering his letter of ..... *Nov .10, 1914* ..... *Adv.* Key *A*

can easily value such sections in which his flock excels twice or three times the unit value.

We would recommend that a record sheet properly filled out be sent to the prospective customer giving him an idea in advance what to expect for the money.

The Standard of Perfection shows pictures of perfect specimens and is a reliable guide for forming an opinion of one's flock and no poultry breeder should be without it.

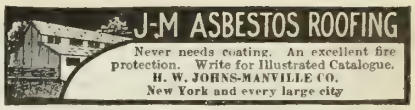
The record sheets which we have devised can also be used as excellent score cards for comparison judging and will give the amateur a correct statement of the quality of his bird which the regular score card does not do. It is understood, of course, that fabulous or fictitious values cannot be used for obtaining the unit value for one's flock. Any bird of average quality will give better satisfaction in obtaining the standard for future sales.

Comparison Judging Record Card. Designed and copyrighted by L. A. Stahmer.

Explanation of the Comparison Judging Record Card.

Comparison judging is used in nearly every show in the country, and while it is absolutely satisfactory to the big breeder who knows his variety as well as the judge, it is not satisfactory to the small breeder or amateur making his first exhibition, as he receives no record to show the quality of his bird.

Believing that if some kind of a card record showing the quality of the bird were given to every exhibitor at a comparison show, the results would be accepted in a more satisfactory manner, we have designed one to meet this purpose. (See illustration.) Judges, especially, will find this card a great help, as they can keep absolute track of every bird in the classes they are judging and will prevent many squabbles in the show room, as the record card will explain everything to the exhibitor.



For the sake of convenience, we have divided the fowl into 7 sections and as no bird is absolutely perfect, we have adopted the following 5 grades to denote the quality of each section for the expression of the judge's opinion, "excellent," "good," "fair," "medium," "poor." To avoid writing out the whole word, we are using the following numbers instead: 5 for "excellent," 4 for "good," 3 for "fair," 2 for "medium" and 1 for "poor." In using the card the numbers are used as follows: 5/4, for instance, meaning excellent shape, good color. We would suggest that the shape always be written above the line and the color below. The judge in the show room will size up the bird as he stands in the coop without handling and the first operation will be to fill in the value of "first general appearance" in the space provided for the same. After he has sized up all his birds in this manner he will now take the bird out of the cage and go over it section by section marking the values in the proper places.

After all sections have been gone over and the leg band number has been noted in its place, he will add up the totals of color and shape and write the amount in the space under "revised total score." If a bird is poor in a section, either in color or shape, deduct 1 from the total for each section in which this mark appears. Other indications can be made on the card by drawing pencil lines to the spot and writing an explanation on the margin. For instance, for smut in Rhode Island Reds a line could be drawn to the exact spot where it occurs and in the margin the abbreviation "sm." or other indicating letters will give the judge the exact knowledge of the defect and will also protect him from having birds switched on him. We have used this card and it has given excellent satisfaction. Especially in parti-colored birds, where the classes are large, it will enable the judge to score them much faster and better than any other system.

My world-famed layer, whose daughters are also making good.

SPECIAL POULTRY COURSE.

THE unusual interest in poultry raising brought about by the rise in price of other foodstuffs has increased the demand for poultry instruction. To meet this demand the College of Agriculture of the University of Missouri has established a Special Poultry Course. The course is for busy people. It lasts seven weeks, beginning Monday, January 4, 1915, and ending Saturday, February 20. To acquaint the student with the problems of the poultry man, to teach him how to raise chickens more efficiently, to make him realize the chances of failure and also the opportunities for success—these are some of the things the Special Poultry Course aims to accomplish.

The work is designed especially for the busy man who cannot spend more than seven weeks in fitting himself to be a poultry specialist, or to operate a small poultry plant with the same exactness that a poultry specialist would demand. The course covers the same field as that pursued by regular students, but takes up only the more practical aspects of the work. It deals with the fundamental things. It presents in a plain, sensible manner the principles of poultry culture and acquaints the student with the practices of poultry raising.

The equipment of the poultry department is complete and modern. The poultry building is a stone structure 30x60 and has three class rooms besides an incubator cellar, having a dozen types of incubators and a capacity for 2,500 eggs. The poultry plant covers five acres, has a housing capacity of 700 mature birds, and brooding capacity for 2,000 chicks. The buildings have a total of 400 running feet and consist of twenty-five pens for instructional work. The stock consists of many varieties, thus affording the student excellent opportunities to learn the points of the different breeds.

The work consists of lectures, laboratory and practice work. There is a lecture daily upon such subjects as housing, yarding, breeds and breeding, fattening, killing, dressing, marketing, feeding for egg production, diseases, incubating, brooding, and general summer care. The laboratory work is daily and covers the subjects mentioned above, but consists of actual work, such as drawing and criticising plans, judging chickens for fancy and utility purposes, grading eggs, killing and dressing fowls, making and applying louse powder, mating pens, studying incubators, brooders, etc.

The practice course is work in which the student feeds and cares for laying hens, operates incubators, brooders, etc., and learns the art of poultry raising by doing the thing itself.

In addition to the above, the regular student in the Special Poultry Course can supplement his poultry work with work in orcharding and small fruits, and dairying, if he chooses.

For full particulars address H. L. Kempster, University of Missouri, Columbia, Mo.

SHEPPARD'S ANCONA FARM.

THE man with push, energy and stick-to-it-iveness is always bound to succeed in any undertaking. Nowhere have we seen this more fully demonstrated than in the success made by H. Cecil Sheppard, Berea, Ohio, "the man who has made Anconas famous."

On a recent visit to the home of Mr. Sheppard he told us in detail just how he started into the poultry business,

Scene in the orchard of the Ancona Farm of H. Cecil Sheppard, Berea, Ohio.

what he had done to insure success, the office detail that is necessary to satisfy his customers in every particular, and the many little things that go toward making a success of the business.

It is only a few years ago that Mr. Sheppard was representing a wholesale manufacturing company of Detroit, Mich., in the capacity of a traveling salesman, and, having a strong desire to get into some kind of business for himself, decided to move to some suburban town where he could take up the poultry business.

In March, 1906, he moved from Cleveland, Ohio, to Berea, Ohio, which is a suburb of Cleveland, and started to work in earnest to develop a business of his own.

At the start he made some mistakes, one of which was his attempt to handle several different varieties of poultry. He started with five different kinds, which included White Leghorns, Rhode Island Reds, Barred Rocks, Minorcas and Anconas. At the end of the first year he discovered his error. He also discovered that during the year the Anconas had laid the most eggs and consumed the least amount of feed, and, therefore, decided to discard all the other varieties and devote his entire attention to developing his own strain of Mottled Anconas.

During his first years in the poultry business he still retained his position on the road, being home only on Saturdays. During his absence the chickens were looked after by the maid, who became very much interested in the work.

The first year showed a profit of about $150 on his poultry, which was very satisfactory in view of the fact that he had done but very little advertising.

The second year he decided to go into the undertaking a little more extensively; raised more stock and did more advertising, which resulted in a net profit from his poultry the second year of $890.51.

Again he decided to go into it a little more extensively, and at the same time he increased his advertising

We are now booking orders for eggs for early hatching. Catalogue free.

BRUCECROFT POULTRY FARMS, Lynbrook, New York

very materially, especially in AMERICAN POULTRY JOURNAL. At the end of the third year his advertising had sold for him $1,900 worth of fowls and eggs. This made him realize that his poultry business was getting too large to longer be looked upon as a side issue, and he decided to give up his position on the road and devote his entire time and attention to his back-lot poultry business.

He kept adding a few small buildings to his plant and increased the size of his flock, and also increased his advertising, as he learned that the only way to sell his stock was to let the public know just what he had to offer them.

At the end of the fourth year his sales amounted to $4,094, and he had no regrets that he had given up his position on the road and devoted his whole time to developing his Mottled Ancona business, as he had enjoyed the work, his health was much better and his bank account had been very materially increased.

At the end of the fifth year he had done a business of $9,515. After deducting expenses showed $4,223 on the credit side of the ledger.

Up to this time Mr. Sheppard had been unable to supply the demand he had created for his Anconas, and, in order to be in a position to supply this ever-increasing demand he decided to abandon his town lot plant for a real poultry farm. He was fortunate in securing his present farm, which is located one mile from Berea and ten miles from Cleveland on the interurban electric line. On this farm he has erected modern buildings for his poultry, which includes laying houses, brooding houses, incubator houses, etc. He also has a very fine residence that is fully equipped wth every modern convenience, including both gas and electricity. He also has his own water works with which he can supply water to any part of the farm. He manufactures his own electricity and has his own natural gas well. In fact, this farm is the most ideal and independent poultry farm we have ever had the pleasure of visiting. All of which is the results of persistent effort, good judgment and sound business methods used by Mr. Sheppard.

The past season he raised about 3,500 birds and at the time of our visit in October had about 3,000 head of Anconas on the farm, many of which were good enough at that time to win the blue in any show in the country.

The Anconas mature very rapidly under Mr. Sheppard's systematic care and many of his pullets this season were laying by the middle of May and have continued to shell out the eggs ever since.

Mr. Sheppard sells a great many day-old chicks and to supply the demand for these has an incubator capacity of over 60,000 eggs per season and expects to double this in the very near future.

Some little time ago Mr. Sheppard decided to tell all those who wished to know just how he made such a grand success in the poultry business and to this end wrote a book entitled "$4,223 in One Year on a Town Lot." This book is well worth reading by any one who is at all interested in poultry. No matter what variety they breed, it gives practical information on how to build up a poultry business and make it pay.

COMING BOOM IN POULTRY, SHEEP AND HOGS.

Quoted from October 3, 1914, issue of *American Agriculturist*, New York City, published by Orange Judd Company.

ANY person who has brains enough to "see through a hole in a stone wall" must be impressed with this fact: The future of live stock husbandry in the United States was never so assured as at this moment. The demand will be extraordinary for poultry, meat and for eggs; also for lamb and mutton and for pork and pork products during the next six, twelve and eighteen months.

The domestic market and the foreign trade will grab up at good prices every pound of this stuff that can be produced. The demand will be well nigh insatiable for eggs and poultry from now on, because of the high price of other meats and of grains. Eggs will be the cheapest concentrated food that people can buy. Poultry will be really the cheapest meat, and it is the kind that can be most quickly produced. Lambs come next in quickness and production, then pork and mutton. There must be a veritable boom ahead for poultry, sheep and hogs. We cannot see it any other way.

For quick money, for sure cash in hand with the least delay and at the smallest risk, keep hens or sheep, or hogs, or all three. Begin now. A golden market awaits these products, especially every pound of them that can be marketed within three, six or nine months.

Dairying will, of course, continue to prosper, so will the production of beef. But it takes so long to increase the supply of beef and the present shortage thereof is so great as to create almost a crisis in the world's meat supply. The quickest, simplest and most profitable way of meeting this condition, which now is accentuated by the wars, is as follows:

1. Keep more hens, give them better attention, make more eggs, use incubators for raising more chickens, sell more eggs and dressed poultry.

2. Keep more sheep, give them the best of feed and care, raise more lambs, fatten some of them for the early market, raise the rest for wool and mutton. It looks like wool would command fair prices for several years.

3. Raise more hogs, give them the best of care, breed them as freely as possible, push their feeding and get them on to the market as young as may be.

Cheap cottonseed meal to supplement the higher cost grains, together with plenty of cheap, green food, dry roughage and silage, will enable you to produce poultry, eggs, sheep and hogs at a cost that should surely yield a handsome margin of profit.

A prize-winning Rose Comb Black Minorca male, as bred by G. A. Clark, Seymour, Ind.

HOW I MADE MY HENS LAY DURING THE WINTER MONTHS.

AS a constant reader of your valuable paper, permit me to send you a few lines regarding the success I had with my flock of W. Wyandottes last winter.

I wintered about 100 yearling hens and pullets, which gave me an average of 50 per cent of eggs from December 1 to April 1.

I have a good hen house, 14 feet wide by 40 feet long, thus providing a little over 5 feet square of floor room for each fowl. The floor is always covered with plenty of straw. The morning feed consisted of plenty of wheat thrown in the litter to give the hens sufficient exercise. This kept them busy until noon. Then I gave them all the sprouted oats they wanted, produced in my metal sprouter.

Orr's Col. Wyandottes

I am willing now to part with a few good birds, some real nice cocks, hens, cockerels and pullets. The winning strain at the Garden (N. Y.) Show for years. No circular. Write

200,000 S. C. W. LEGHORN BABY CHICKS FOR 1915

If you have never done business with the Everlay Farm by all means investigate our stock and our business methods. We shall operate seven Hall Mammoth Incubators next season, and every egg used will be our **No. 1 grade, "Everlay Strain" S. C. W. Leghorns.** Again we have increased our incubator capacity 30,000 more, and we know we shall be taxed to our limit for months next season. We don't think there is a plant in the U. S. that can begin to show the individual quality there is in our stock. We are breeding the best Leghorns that skill, labor, capital and experience can produce, —such Leghorns as 99 per cent of the public desire. Better looking, better laying, and stronger stock cannot be bought elsewhere at any price. Ninety per cent of our customers raise 90 per cent of the chicks we ship every year. Considering the high quality of our stock our chicks would be cheap at $25.00 per 100, but our prices will be as follows:

25 to 50 chicks...17c	500 to 1000 chicks 14½c
50 to 100 chicks...16c	1000 to 2000 chicks 14 c
100 to 500 chicks...15c	2000 to 5000 chicks 13½c
5000 or more chicks 13c	

We require a deposit of 25 per cent with all future orders, and don't delay if you want early bookings for next season. Last year we were sold out for February, March and April deliveries by Jan'y 10th. We are ready to deliver unlimited quantities of chicks, up to 12,000 per week, after February 15th. **Our 60-page 1914 catalog, free on request.** Our new 1915 edition will be ready some time in December.

The Everlay Farms Box 240-M Methuen, Mass.

It was this feeding of sprouted oats which I considered mostly responsible for the large number of eggs they laid during the winter months. It was no trick to provide plenty of nice, fresh, green egg-making feed in this kind of sprouter. All that was necessary was oats, water and a little heat and 15 minutes a day to attend to it.

It seems to me that if every poultry raiser in the country used one of these wonderful green feed-making machines, there would be fewer failures in the poultry business and more people would be enabled to enjoy nice, fresh eggs for table use instead of having to rely on cold storage eggs of unknown quality.

Twice a week I let my hens enjoy some cut green bones, which were highly relished.

In the afternoon I fed them half corn and half wheat, with an occasional ration of buckwheat. Grit, shells and charcoal were always within their reach in hoppers, while water was always provided for them in a non-freezing drinking fountain.

You will see by this that my hens were well taken care of and provided with everything to make them contented. They repaid me these accommodations with plenty of eggs, which I had never any trouble to sell at a good price. E. H.

IT IS TO LAUGH.

HERE is a bit of a smile from the "Webs and Feathers," by Editor Winthrop B. Atherton in *American Fancier and Stock Keeper* for November 7:

"It is to laugh.

"The editor of the *Reliable Poultry Journal* in the October issue hands out some taffy to Messrs. Hicks and Denny for the 'vigorous defense' they made against the admission of Pit Games to the American Standard of Perfection and incidentally slaps the Boston show by stating that 'year after year there has been a display of steel spurs and other cock-fighting equipment, with a salesman in charge taking orders,' which, by the way, is not true, and as the editor of the R. P. J. has not attended the Boston show in a number of years some one evidently 'filled him up.' Some years ago unknown to the management a party did offer these articles for sale but the fact did not become known to the management until some time after the show.

"But listen. Behold this editor of the R. P. J. sitting in his easy chair with hands clasped and eyes turned upward with an holier than thou expression on his countenance, thinking that he had 'put one over' on Boston, to find that he threw a spit-ball, that it went foul and landed plump between pages 12 and 13 of the premium list of the Buffalo show, of which he is a director and his employee to whom he handed the taffy is secretary and then he realized that this same Buffalo show offers prizes on thirteen varieties of Pit Games, and among the special prizes $20 in cash is offered on Pit Games. He jumps for the last premium list of the Boston show, scans it carefully and is unable to find Pit Games mentioned anywhere throughout the list. Upon the wall in snake-like letters appear the words 'offense to average decency,' the holier than thou expression disappears and a puzzled look comes over his face. He grits his teeth and says to himself: Cuss the fellow who filled me up and put me in the consomme.

"It is to laugh."

THE GREAT HAGERSTOWN FAIR.

A Record Entry of Over 7,500 Birds. Complete in Every Department and Real Quality the Feature. Notes, etc., by H. P. Schwab, Eastern Representative A. P. A.

Hagerstown's new world's record entry of 7,500 birds has been the event of the season; it sets a new mark of highest caliber for all others to follow, and as the reader can well imagine, with this record-breaking entry was combined unusual quality. The display this year was noticeable particularly in that most every class of every variety was very complete. There were no huge classes, but most of them were big, making a well balanced show.

To Frank Baker and W. Frank Spahr every credit is due for this great exhibit. They are royal fanciers and in their handling of this show prove the quality they are made of, that they have the confidence of the breeders goes without saying, for the results attained prove this beyond question—they well deserve all.

The Hagerstown banquet has for years been an event of special interest. This year there was again the parade, with an unusually good band and the famous "Scotty Bowers" as marshal, over 300 visiting breeders attending, including nearly fifty ladies. The toastmaster was classy and besides the good things to eat, plenty of amusement was had. Among the speakers were Wm. B. Atherton, Geo. O. Brown, L. P. Graham, Richard Oke, J. H. Drevenstedt, Frank De Lancy, Scotty Bowers, yours truly and Messrs. Baker and Spahr, and the esteemed president of the Hagerstown fair.

Two special meetings and initiations of the "Fleas" were held with about thirty new members admitted. Colonel Graham gave the new members absent treatment.

Here we saw many visitors and a great many new breeders. Sales were many and I believe Hagerstown next year will again show a greater entry. Rain for two days kept the crowd down, but it in no way dampened poultry interest, as the great building was well filled at all times with admiring throngs.

A catalog of entries is promised next year. This has been sadly lacking for two years.

The Birds and Exhibitors.

In Plymouth Rocks, Barred, White, Buff, Columbian, etc., the entry was half or less than a year ago, but there were enough seen to still convince those interested that they are a valuable breed.

Barred Rocks were a very good class except that it was not nearly as large as it usually is. Pullets the largest and best class, C. N. Myers, Hanover, Pa., winning cock 4, hen 1, pullets 4 and 5, cock in short feathers, still a magnificent bird with the best of color and barring and extra fine size and shape. Mr. Myers makes a specialty of the pullet line birds, his winning hen a beauty, sound and good all over. He showed an unplaced hen in short feathers that is as promising as we expect to see. When finished she should be one of the best. Pullets were slightly past.

C. Guy Myers, Siddensburg, Pa., won cocks 1 and 3, hen 3, cockerel 3, pen fowls 1, pen chicks 2. This line has been coming fast. Their recent winnings make them a contender at any show. His old pen was a fine mating of quality well shown.

J. W. Smith, Dallastown, Pa., exhibited some very fine pullets and we were glad to see him back showing again.

Other winners were W. G. Boileau, M. B. Hickson, E. A. Grove and C. C. Boileau.

Buff Rocks were superior in color, Vierheller Bros. being among the leading winners, with hens 1 and 2, pullets 3 and 4, pen 1.

White Wyandottes—a good class of good quality, the winners extra fine specimens, all commendable.

Silver Wyandottes—one of the best Fall classes ever seen. First cock, the gem of the class, Judge Drevenstedt praised specially his pure silver color, open, clean lacing, head shape, etc. This bird was owned by Lou P. Graham, Collingswood, N. J. Other winners also of a high class.

Buff Wyandottes also a very sweet class of rich color and good forms. Blacks a very large nice class. Goldens shy in numbers. Columbians a large class, full of merit.

Partridge Wyandottes one of the best, very rich in quality. The Sheffield Farms, Glendale, O., making an extraordinary win of cocks, 3, 4 and 5; hens 1, 2 and 3; cockerels 1, 2 and 3; pullets 1, 2 and 4; pen fowls, 1 and 2; pen chicks 1 and 2. This with their great win at the late New York State Fair, etc., this Fall starts them off again for their annual record they have made for years.

American Dominiques—A large and beautiful class. These old-time favorites will ever be popular with those that want a good practical variety.

S. C. Reds—One of the largest classes at the Exhibit; a very even lot with awards very nicely placed by Judge Card. B. H. Scranton, Rising Sun, Ind., made a splendid record by winning cocks, 1, 2; hens, 2, 3, 4; cockerels, 1, 5; pullets, 1, 2, 4; pen fowls, 1; pen chicks, 1. Deep rich sound color was seen to advantage in this line. Wings and tails very good.

The Schenley Heights Farm, Pittsburgh, with Mr. Rankin in charge won cock, 5; hen, 1; cockerels, 2, 3, 4, and pullet, 5; This line shows extra value and promise. The cockerels were not quite finished, but they sure have the quality. First hen was the famous New York winner, such can't be beat, form ideal, color extra fine.

Rose Comb—A nice lot, well shown. There should have been more.

Dorkings in all varieties formed good classes. Javas in black and mottled, fine large classes. Brahmas and Langshans in black and white were here in quantity and quality.

Orpingtons for quality were a feature display, and it remained for Mr. Len Rawnsley of the Rawnsley-Shields Farm, Columbus, Ohio, to carry away the Sweepstake Special of the show (for best cockerel in show) on his First Prize S. C. Buff Orpington cockerel. A magnificent specimen of the best color, shape and

At the Great New York State Fair

In the biggest and best class of S. C. Reds yet shown in the east we won 1st display, our 1st prize hen winning color special. Stock for sale. Eggs in season.
Geo. W. Tracey, Box R, Kinderhook, N. Y.

I am offering choice breeding Cockerels for $2.00 each and up. If you want pairs, trios or pens, I can make you most attractive prices. I have my breeders all mated up and can furnish eggs for hatching after December 15th. My new catalogue will be ready for delivery the 1st of January. Write for one, which will give you a complete description of my plant and stock and also prices.

I guarantee you satisfaction. Best of reference. "The Most of the Best for the Least."

SUNLIGHT POULTRY FARM E. N. Lemon, Owner LYNCHBURG, O.

BRINKLEY'S WHITE PLYMOUTH ROCKS

"The Best in the South"

My birds made a great **win** at **Memphis** as follows: **Pen 1-3; Cock 1-2-4; Hen 1-2-3-4; Cockerel 1-2-4 and Pullet 3-4-5.** At **Nashville** they won: **Pen 1; Cock 1-2; Hen 1-2; Cockerel 1 and Pullet 1-2.**

They won four of the five blue ribbons at Little Rock, Ark., including Champion Cock and Hen and the same record at Jackson, Miss., including Champion Cockerel and Pullet. The $100 Sweepstakes, the Best Hen and the wonderful record of 29 out of 30 prizes, was their record at Memphis, Tenn., 1913. **When better birds are bred Brinkley will breed them.** I can furnish winners for any show at reasonable prices. Let me hear your wants. Write for a catalogue, it's free.

W. J. BRINKLEY, Prop. D. R. Jolly, Supt. Box 10 IUKA, MISS.

Gensemer Bros., 151 Main Street, Creston, Ohio

condition. His complete winnings are: Buff Orpingtons, cock, 1; hens, 1, 2; cockerels, 1, 2, 3; pullets, 1, 2; pen fowls, 1; pen chicks, 1; Red Sussex, cock, 1; hens, 1, 2, 3; cockerel, 1; pullet, 1; Speckled Sussex, cock, 1; hen, 1; cockerels, 1, 2; pullets, 1, 2; pen, 1; Light Sussex, cock, 1; hens, 1, 2; cockerel, 1; pullet, 1; pen, 1. A record of this kind is difficult to imagine and all credit is due this firm for the value of their stock.

Mr. H. P. Kettering, Pittsburgh, Pa., won in Buff Orpingtons, cockerel, 5; pullet, 5; S. C. White, hens, 4, 5; cockerel, 3; R. C. White, hen, 2; cockerel, 1.

In Blue Orpingtons Mr. Haldie Nicholson, Leominster, Mass., made his usual grand play by winning on four entries, cock, 1; hen, 1; cockerel, 1, and pullet 1. Mr. Nicholson has surely done well with this variety and improvement was fondly noted.

S. C. White Leghorns were a strong class, well shown. The first-prize cockerel, owned by Ryan Bros., was a screamer, condition and quality with style of the best. First hen also by these people a gem and in the pink of condition. Such stock will win any show.

Single and Rose Comb Brown Leghorns were both large classes with merited winners in each.

S. C. Buffs were the largest of the Leghorn classes, with competition very strong, good form, size and exquisite color noticeable. Black and Duck Wing Leghorns were well represented.

S. C. Black Minorcas—A class rich in highest quality. Mr. J. P. Hilldorfer, Saxonburg, Pa., winning cocks, 1, 3, 5; hens, 2, 4; cockerels, 2, 4; pullets, 2, 3, 4; pen, 1. In the opinion of many the third pullet should have been first; we also believe this. First was a beauty in color.

Rose Comb Black and Single Comb White Minorcas—both formed large and well-balanced classes.

Anconas, Spanish and Andalusians were all strong classes and besides the winners many fine birds were seen.

Campines proved their popularity here again for in both Silver and Golden a fine display was seen. First pen of Goldens owned by Mr. A. A. Carver, Seville, Ohio, was to our mind an extraordinary pen of superior quality in matching as well as in quality. Mr. Carver will no doubt show his famous line of Reds later, also his Red Sussex. Come to think of it, these Red Sussex are getting mighty popular.

The exhibit of Polish was a show in itself, very large and very complete, making a most attractive display.

Hamburgs were also well represented in large classes. It was a beautiful display with many of the rarest of the rare kind.

Dark Cornish, a very good strong class, a tribute to Judge John W. Ward, Jr., who handled them in a masterly manner.

Houdans, Lakenvelders, Faverolles, La Fleche, etc., were all here in good numbers. If there is a variety, standard or non-standard, that was not exhibited here, we would like to know it.

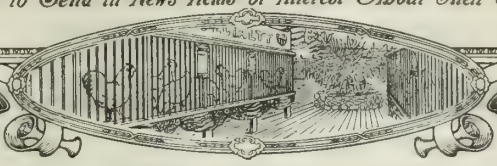
Bantams in all varieties and great numbers were displayed; the "gallery" was full of 'em. These little beauties attracted much attention and ever are a feature in any show.

The display of ducks was one of the largest seen in some time. The Indian Runners, Rouen, Cayuga, White Muscovy, Mallard and Pekins formed the largest classes.

Geese filled many cages; we thought the quality very fine.

Pheasants were displayed in large coops and were seen to advantage.

Rabbits, cavies, numbered over 300 and if any variety was missing, we don't know of it.



Pigeons numbered over 1,200 and completed the display which from door to door was most complete and worthy.

There are several conditions, all of which help to make Hagerstown great. The management, its past history and beautiful poultry building and the great number of well-known breeders who have exhibited there for years, all tend to its greatness. Before the great building stands the heroic monument erected to the memory of John L. Cost. The same feeling and sentiment that erected this monument is being displayed to Messrs. Baker and Spahr, and these conditions ever assure greater and better Hagerstown Shows.

We would be lax in our duty if we did not specially mention the President of the Association who is one of the best friends the poultrymen have. Although he has no personal interest in poultry, he has always been their champion and has given all the managers have asked for.

Coupon good as part payment on your subscription to this or any other poultry paper, if you will send for my catalogue of Poultry Books and Magazines.

E. A. Van Duzee, Jr., Carrier 50, St. Paul, Minn.

Cut Clover Makes 'em Lay

Feed your hens clover, alfalfa or vegetable tops (cut into fine ⅛ in. lengths) and *watch them lay!* Cheapest, most productive egg and flesh forming food known. J. Robert Vincent, Proprietor, Carson Creek Poultry Farm, Folsom City, Cal., writes—"My

'New Model' Cutter

has paid for itself twice over in this one season in the saving in feed." Strong—simple—efficient. All iron and steel. Easily cuts a bushel of feed in 10 minutes *worked by hand.* Can be fitted for power, too. Built with 4 removable carbon steel knives, quickly adjusted, easily sharpened. Write for Free Descriptive Pamphlet—and **Free sample of cut alfalfa.**

Silver Mfg. Co., 283 Broadway, Salem, O.

Get Your Sprouter

From the Man Who Knows How to Build

J. W. MILLER Inventor and Manufacturer of Advanced Types of Incubators, Brooders, Grain Sprouters.

Profit-Making Poultry Outfits

The demand for Grain Sprouters has brought many on the market built by men who lack experience in manufacturing articles to meet the demand of poultry raisers.

It takes months of experimental work and weeks of tests to be able to turn out a good sprouter. Our machine is built along these lines. We spent thousands of dollars perfecting the IDEAL. Now, the

IDEAL Grain Sprouter

has reached the highest point in efficiency tests. Over 20 are in use on my Millhook Poultry Farm, hundreds on other large chicken farms, thousands scattered throughout the country—all turning out the juiciest, tender greens ever sprouted.

If you want feed like that—feed that will
—**Increase Egg Yield 50%,**
—**Make Chicks Mature Earlier,**
—**Bring More Fertile Eggs, and**
—**Keep Fowl in Condition**

get the **Ideal Grain Sprouter.**

Our sprouter produces, with least cost and labor, the best green feed in the natural state every day in the year.

It is made of the best lumber outside and finished like a piece of furniture. All metal inside, rustless and durable. Equipped with famous Ideal **Safety Lamp.** Uses less oil. Easy to operate and take care of. Guaranteed in every way.

Get Special Low Price Offer On Our Four Sizes

Also full particulars and description of our **Ideal Guaranteed** Grain Sprouters. Address

The General says:-

The roof goes on last—but think of it first. It's the final protection for buildings. This label stands for 15 years of guaranteed service *at least*—when you buy

Certain-teed

ROOFING

—and it means that the 3 biggest roofing mills in the world are behind the reliability of your purchase. There is no *test* by which you can judge roofing. The **Certain-teed** label is your protection.

Your dealer can furnish **Certain-teed** Roofing in rolls and shingles—made by the General Roofing Mfg. Co., *world's largest roofing manufacturers.* East St. Louis, Ill., Marseilles, Ill., York, Pa.

BARGAINS IN INCUBATORS

Why pay $15 or more for a Hatcher when you can get a

150-Egg Rockford

For Only

Freight Paid East of Missouri River and North of Tennessee. Part paid to other points

$8.50 With 150-Chick BROODER Only $11.50

Built with most efficient heating system. Ventilation automatic. Thermometer and Thermostat the equal of those on $30 & $40 machines. Strong legs so incubator won't wobble like others and spoil hatches. Handsomely finished.

The "ROCKFORD" Certainly Does Hatch Healthy Chicks

You take no risk. Everything guaranteed. Simple to operate. Even young boy or girl can take care of "Rockford" and get 100% hatches. Directions tell all.

Send $8.50 for Incubator

or $11.50 for both Incubator and Brooder.

Order direct from ad now or send for particulars. If you buy from us, you'll save money—at least $10.00.

Rockford Incubator Co., Dept. A1, Rockford, Ill.

How to Pick the "Layers"

Don't kill or sell your laying hens. The Potter System is a simple certain method of picking the layers from the loafers or diseased hens. Used by over 50,000 satisfied poultry keepers, who are saving layers and dollars every year. Our new 100 page Potter System book tells the the secret as well as giving much other information for poultry keepers. If you want to make more money from your flock, write today. Full information free.

POTTER & COMPANY
11 FOREST AVENUE DOWNERS GROVE, ILLINOIS

6 in 1 Exerciser-Feeders

prevent overfeeding and induce laying by making fowls work for their food. Central section contains grain which fowls scatter in litter by pecking at an agitator. Six other compartments for dry-mash, scrap, shell, grit, etc. Other feeding devices unnecessary.

Price 20-quart, $3.75; 40-quart, $4.75

Dealers wanted throughout U. S. and Canada. Ask for name of dealer nearest you.

HOVER-INCUBATOR MFG. CO. Box 511F Browns Mills, N. J.

Has Big Record for Successful Hatches

Insure getting most chicks possible from your eggs by buying the time-tested, old reliable Progressive Incubator—the self-regulating machine with hundreds of dead air cells. Poultry raisers everywhere report 100 per cent hatches. Honestly built, sold at bargain prices—and we'll buy back with 8% interest if not as represented.

$7.35 LOWEST PRICE YET BIG 155-EGG INCUBATOR

All wood parts of California Redwood—has double disc temperature regulator, heavy metal safety lamp, egg tester, thermometer, copper boiler, hot water heat, deep nursery, double doors, strong, well-built 155-egg tray. Blatchford's Calf Meal Factory

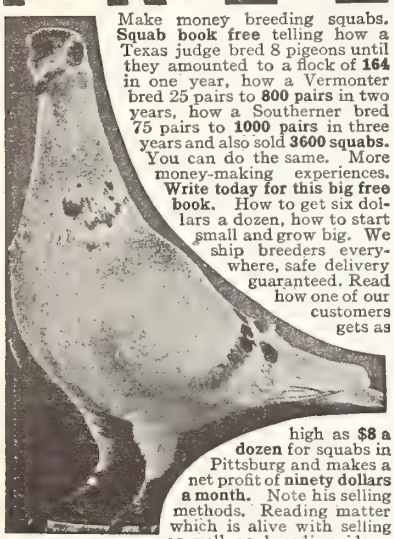
Waukegan, Illinois

Your Hens Must Pay This Winter



IN these times of high prices for all kinds of meat the poultryman simply must make his hens pay. All kinds of poultry feed are high in price and must be made to bring the maximum in returns. There is no one best poultry food. Many are good singly and in combination, but the *very best results* come from feeding *roots* and *vegetables* in combination with other foods. Roots and vegetables are cheap and thereby reduce the feed bill while adding to its value.

Banner Root Cutters

prepare roots and vegetables of all kinds faster and better than it can be done in any other way. Send for free illustrated booklet and make the hens pay this winter. Address

O. E. Thompson & Sons, Ypsilanti, Mich.

FREE

Make money breeding squabs. **Squab book free** telling how a Texas judge bred 8 pigeons until they amounted to a flock of **164** in one year, how a Vermonter bred 25 pairs to **800** pairs in two years, how a Southerner bred 75 pairs to **1000** pairs in three years and also sold **3600 squabs.** You can do the same. More money-making experiences. **Write today for this big free book.** How to get six dollars a dozen, how to start small and grow big. We ship breeders everywhere, safe delivery guaranteed. Read how one of our customers gets as high as **$8 a dozen** for squabs in Pittsburg and makes a net profit of **ninety dollars a month.** Note his selling methods. Reading matter which is alive with selling as well as breeding ideas. Squabs well sold are easily raised. Many successful women customers. Read of their methods and the results they accomplish. For prices and full particulars see our free book, "How to Make Money with Squabs." Write for it today.

Five Famous Poultry Experts

FIVE of America's Leading Poultry Authorities give their advice and experience on Feeding in this book. They tell how to feed, to produce eggs—how to develop chickens for the market or the show. They give *their* views—not ours. But they all use and recommend a *scientifically* balanced ration—the kind you get in the old reliable RED COMB Meat Mash, Chick and Poultry Feeds and POUND SQUAB Pigeon Feed. Not a by-product. Finest quality whole grain ground at our mills. RED COMB makes eggs—makes flesh—makes show condition—*makes profit* for you. Ask the dealer in your community who handles RED COMB.

RED COMB POULTRY FEED

It costs us something to pub'ish the book by these authorities. But we send it free on request. Address

Cleveland's Quality Show.

The Cleveland Poultry Breeders' Association begs to announce to A. P. J. readers that their third annual exhibition, to be held in Gray's Armory, January 4th to 9th, will eclipse anything ever pulled off in the Sixth City.

Last year's show was conceded by all prominent poultry men to be the best they ever attended, but wait for this one.

The Ohio State University of Poultry Husbandry will give a free exhibit of the poultry industry in its entirety, which promises to be a big feature of this show.

Other attractive features will be announced in the premium list and numerous national and state meets of the various specialty clubs will be held in connection with this show, the main one being the national meet of the Buff Wyandotte Club, where the extra cash prizes will be a great attraction to all members belonging to this club, and Mr. L. D. Howell, secretary of the Grand Central Palace Show, New York, will be the judge of this class.

Other judges will be J. E. Gault, Luther A. Stream, W. G. Minnich, A. H. Emch, George Webb, F. L. Simmons, J. W. Whittaker, J. H. Busch. Entries close December 15th.

Dr. R. H. Lindhorst, Secretary,
Clark and West 25th Sts.,
Cleveland, Ohio.

Order Your Catalogue for the Chicago Coliseum Show.

Breeders who cannot attend the Chicago Coliseum Show, December 11th to 16th, can secure the marked catalogue, giving name and address of all exhibitors, with complete list of winnings, by sending thirty-five cents in stamps or coin to Theo. Hewes, Secy., Indianapolis, Ind. The marked catalogue will be issued Monday morning, December 14th, and all mail orders received will be filled immediately and forwarded directly from Chicago so there will be only a matter of about one day's delay to breeders receiving the complete list. Please see that your order is in our hands in time.

The Fort Orange Poultry, Kennel and Pet Stock Association of Albany, N. Y., will hold their annual show at Union hall, Albany, N. Y., Jan. 19, 20 and 21, 1915. The association has started the innovation of a three-day show only, thus making it possible for exhibitors to have their birds returned promptly the same week in good condition. The association has a long record of successful shows held year after year, and the show this year promises to be better than ever. Liberal cash specials will be offered. Full particulars can be secured by writing to Mr. Charles B. McEwan, Show Secretary, Albany, N. Y.

The World's Greatest Silver Cup Show.

The 14th annual exhibition of the Hamilton Poultry and Pet Stock Association will be held at Hamilton, Ohio, Dec. 29th to Jan. 3d.

As usual the business men of this enterprising city, interested and anxious to see a fine and large exhibit of pure bred poultry, have donated to the association over 100 handsome silver cups of the kind that are worth going after. Over 100 cups have actually been given away each year during the past four years by the association and above all there are no strings attached to any of them; this surely is a record hard to beat. The value of these cups range from $5 to $200, and before the show they are exhibited in the windows of the business houses throughout the city and attract much attention.

As this is the only large show to be held this year in Southwestern Ohio, the management anticipate an unusually large entry, not only locally, but from the surrounding states.

Premium list will be ready about December 1st and will be mailed promptly to all those dropping a line to the secretary, M. B. Crider.

Illinois State Poultry Association.

The celebration of the twenty-first anniversary of the Illinois State Poultry Association will be held at Springfield, in the State Arsenal, January 4-9, 1915.

We have a record of twenty successful shows, each better than those preceding. We expect to continue to improve and hold the best ever this year.

Our Championship Stakes of $100 offer the largest money ever offered for every variety of poultry, ducks, geese and turkeys.

Our sales department is designed to bring the buyer and seller together without cost on the part of either, and we ask that all our exhibitors make use of this department. We had lots of inquiries for stock last year which we could not supply. Theo. Bates of Pittsfield is the superintendent and will give his entire time to this department.

If you have not written for a catalog of this show do so at once. Theo. S. McCoy, Golconda, Ill., is the secretary. Entries will close December 19th, 1914.

Champaign, Ill., is preparing for their Fifth Annual Exhibition which will surpass the great show held there last year. D. E. Hale and Theo. Hewes are the judges and the show room will be in charge of A. D. Jolly, superintendent, one who has had a lot of experience and knows how. The large Armory and uniform cooping make this one of the most attractive shows in the state. At this show will be held the second annual meet of the Central Illinois Single Comb Rhode Island Red Club. They offer five high-grade imported Swiss watches on this breed. Local White Orpington breeders offer some very special prizes on their breed. They will give one fifty-dollar silver cup, two thirty-five-dollar silver cups and forty-five dollars in gold. There are many special prizes offered on other classes. For catalogue and information address Paul T. Bacon, secretary, Champaign, Ill.

The Fanciers' Association of Indiana will hold their 15th annual show, in Indianapolis, Feb. 1st to 5th, 1915. This will be the only show held in Indianapolis this year. This means one grand big show of the best quality. The judges so far selected to place the awards are, Pierce, Hewes, Moe and Zike. Others will be added. A number of specialty clubs will hold annual and state meetings at this show. Black Orpington, S. C. Brown Leghorn, Barred Rock, Buff Rock, and White Rock, with others have been booked. The Bantam classes will be a special feature of this show as for the past two years. Bantams at this show made a good show alone. A request for premium list sent the secretary, C. R. Milhous, Indianapolis, Ind., will be filed and lists will be sent as soon as out.

The second annual show of the Chicago Heights Poultry Association will be held at Chicago Heights, December 30-31, 1914, and January 1-2, 1915. Mr. Chas. A. McClave will judge same by score card. Entries close December 28th. Uniform cooping. Premium lists may be had by addressing B. T. Gibbs, Jr., Secretary, Chicago Heights, Ill

Ever good for years, better than ever now. Let's have your wants. Have won at all leading shows East and West.

E. H. LICHTENWALTER GIRARD, PA.

ıe Greater Chicago Poultry Show.

Encouraged by the expressions of good ll and the satisfaction displayed by the ıibitors at their first show, the Chicago ultry Breeders' Association are making ry effort to make this, their second anal show, an event that will long be remembered in the history of the poultry ternity in the Middle West. The doors ll be open to the public Thursday morn-, January 14, at 10 o'clock and will close ednesday evening, January 20, at 10 lock.

We have secured a hall that has all the quirements to make a successful poultry ow, it is excellently provided with light- and heating facilities, the natural light afforded by two rows of windows in the nitor roof as well as two rows on the es of the building running the entire gth of it, making the center as bright as sides and unnecessary for artificial hting till late evening.

We have secured the state meet of the ıerican Poultry Association, which makes rs the official Illinois American Poultry ow, and we offer the Gold Medal for the t cockerel in the show, Silver Medals first prize winning cockerels, six medals Bantams, one for the best turkey, the t goose, the best duck and a diploma for best male bird under 1 year in all ndard varieties. We have also with us annual meet of the International S. C. ode Island Club, the National S. C. Black pington Club, the American Columbian mouth Rock Club and the National Coınbian Wyandotte Club, who will make y fine and interesting displays in their pective varieties.

The National Pet Stock Association of ıerica will also meet here and are planıg on showing over 500 specimens of es, rabbits, cavies and skunks, now bred y extensively for their fur.

The following judges will officiate: D. E. le, Earl Hemenway, Charles McClave, Joe leman, Calvin Ott, Frank F. Conway, Jos. gle and E. M. Quay. These men are own the country over for their ability and h is assigned to pass on classes where he particularly fitted to judge, and the breedı realize that a win under them means ality. The judging will start Friday rning, the 15th, after the birds have had lay of rest to offset the inconvenience of vel and become familiar with their quars. The awards will be posted by the ges as soon as the classes are finished, that the exhibitors will be in a position do business on the strength of their winıgs for the best four days of the show. ere were entries from ten states and Can- last year, and judging by the requests eived for premium lists, but very few ates will not be represented by exhibits s trip.

Chicago being in the exact center of the ıe largest poultry-producing states in the ion, makes it a very logical exhibition y, easily reached by the breeder as well being convenient to the prospective buyer, d it is safe to say that there is not a city the United States that has as many poul-raising and interested people within a ius of 50 miles of Chicago. What does at mean to the breeder? It means greater ances for selling both stock and eggs. A prising feature of our last show was the ling end of it. Exhibitors reported sales m the first day, the first two sales reded by the secretary were for a single d a pen, and the figure in each case was 0.00, and this year we will have a new ture for selling birds that we know will ase the man who wants to sell some of stock, and should result in sales whether is on the ground or not, as it can be rked both ways.

A word to the breeders of the varieties ently admitted to the Standard, this is first chance of winning the A. P. A. dals in Illinois and should be taken adntage of in a very conspicuous manner by king nice exhibits, so as to let the visitg public realize the strength of these varies. We will again use the A. P. A. official k woven ribbons and other supplies this ar. Every premium will be paid before close of the show, and all exhibitors can l assured that the best of care will be ven of their birds, and that a square deal all will be the slogan of the show this ar as it was in the past. The Genesee stem of cooping will be used and the comny informs us that they will outdo their vious efforts in putting up a very atıctive and neatly cooped show. The enes will close December 28, 1914. Send our premium list and entry blanks. Do now. For we know that after you will ome acquainted with us in the show room at you will be more than pleased with the ults and that you will then figure on king our show your main western exhibit. thur E. Lemieux, Secretary, 4537 N. St. uis Ave., Chicago, Ill.

The catalog and premium list of the Batavia Poultry Association, for their second annual exhibit are now in the hands of exhibitors. The dates for this show are December 15 to 18, 1914. If you are interested and have not received a copy, write for one at once, as the entries will close at midnight on December 5th. You just have time to get the list and make your entries before that time, if you act quickly. If you will drop a postal card to Charles A. Pierce, secretary, Batavia, Ill., mentioning this paper, your copy of the premium list will come by return mail.

The National Java Club offers to its members the following silk club ribbons: One for the best black Java cock, one for the best black Java hen, one for the best black Java cockerel, one for the best black Java pullet, one for the best mottled Java cock, one for the best mottled Java hen, one for the best mottled Java cockerel, one for the best mottled Java pullet. Any person not a member wishing to compete for these ribbons can register with the secretary before the closing of the entries for this show. Membership is free until March 1, 1915. After that date one dollar per year membership fee will be charged. If interested in the Java, write to the secretary of the National Java Club for free circular. The National Java Club, Herbert J. Link, secretary-treasurer, 61 W. Lake St., Chicago, Ill.

Notice to Rouen Duck Breeders.

To the Rouen duck breeder who sends me the best article written on Rouen ducks, containing three hundred or more words, to be used in the year book of the Rouen Duck Club of America, I will send a fine souvenir from Arizona. Also to second best. Winners to become members of the Rouen Duck Club, if not already members.

Send article at once, as this offer closes Dec. 5th, 1914.

Edgar M. LeBaron,
Vice President of the Rouen Duck Club of America, Box 48, Mesa, Ariz.

—o—

The National S. C. Black Orpington Club will hold its national meeting in connection with the Greater Chicago Poultry Show Saturday morning, January 16th, 1915, at 10 a. m., in the convention hall. Mr. P. A. Cook, president of the club, offers a Silver Cup for the largest and best display, for members only. The Club offers a Silver Cup for the best cock, hen, cockerel, pullet and pen, 10 members competing. A Gold Medal is offered by the Club to every member winning a first prize and a set of 30 beautiful Silk Club Ribbons. Cash specials are offered, based on 150 entries or more, and less than 300 to club members only. Cash specials are offered, based on 300 entries or more, to club members only. For the first entry of ten or more birds, $2; for the largest distance entry of five or more birds, $2; for the largest entry of birds before December 10th, 1914, $3. Breeders who are not members and wish to compete for these club specials can join by sending for application and other information to J. Charles Winterbottom, Secy., National S. C. Black Orpington Club, Jacksonville, Ill.

The members of the National White Wyandotte Club have decided to hold the annual meeting in connection with the show of the Central Pennsylvania Poultry Association at Harrisburg, Pa., December 8-12, 1914. The Harrisburg association has put up $200 for special money, to which the club has added $100, making $300 in all to be competed for by members of the National White Wyandotte Club only. An eighth prize won at this show will bring a money award. Full particulars and premium lists can be secured by writing to Mr. C. S. Smith, Secretary, Central Pennsylvania Poultry Association, West Fairview, Pa. The National White Wyandotte Club will offer a set of handsome ribbons at any show in the United States and Canada to be competed for by members of the club only. Membership costs but $1 per year and full particulars can be secured by addressing Mr. A. J. Gies, Secretary-Treasurer, Delmar, N. Y.

The International Fanciers' Association of Port Huron, Michigan, will hold the show January 26-30, 1915, in the Great Auditorium, which has splendid light and is conveniently located and roomy enough to admit of single decking. This association is under an entirely new force of officers, viz.: H. H. Cobum, president; Dr. Wilson, vice-president; R. C. Carlton, secretary; S. J. Watts, treasurer. The show will have birds fit to win at Chicago, Detroit and other large shows, placing the quality second to none and in every way will be one of the best shows in Michigan. The association was most fortunate in securing the services of L. A. Stahmer as one of its judges. Mr. Stahmer is the best poultry artist in America, specializing in unretouched photos, which show the bird with its natural softness. He will give lectures illustrated by lantern slides. Think what it means to you to win a ribbon under such supreme authority! Madame Paderewska made a special trip to Chicago to engage Mr. Stahmer to get up a Polish standard for her. To show in Port Huron means, you can have first-class pictures taken there of your winners that will do them justice. Judge Luther Stream of Mt. Vernon, Ohio, another most popular and expert judge will do his share. Mr. Stream has had a wide experience in the East and has such shows as Cleveland on his list. Both judges will judge the bird and not the exhibitor. Another great feature of the Port Huron Show will be its fine special premiums—the business men, being with the association to a man, responded most promptly and liberally with beautiful and costly specials. These will be listed in premium lists which will be out about Dec. 20. Write R. C. Carlton for one.

"SIGNOR FLORIO."

HURRY—READ PAGE 1412

rth Annual Show of the Poultry Exhibition of Pittsburgh, Pa., January 18 to 23.

ain it is our privilege to use the col- s of your publication to say a few words ie poultry breeders and fanciers gener- l concerning the particular thing I am nally more interested in than anything pertaining to the poultry industry. is the "Poultry Exhibition of Pitts- n" that I want you to know more about, t has been demonstrated that the more know about our association the more inced you will become that it has ac- lished wonderful results in its progress year to year.

ose of you who attended our last exhi- n must have been impressed with the ty of the exhibits, and the quality it to win, a condition brought about by fact that our exhibition is usually the of the big shows of this country, and as tural result, the best birds of many shows are concentrated at ours, in- g us a larger percentage of the "win- from all sections of the country in etition, in fact our exhibition is called "National Championship Show of the ed States." Under such conditions it good birds to win "first"; but as one itor said to us, "I had rather win d' in such a show as this, under such ing as this, than to win 'first' in any of smaller and less classy shows." And this successful breeder and exhibitor can well be taken as the meat of our usions. A winning at the "Poultry Ex- ion of Pittsburgh" is the highest honor can possibly secure on merit of the exhibited, and merit of judging by the judges who ever handled a bird. May another word, and an important word too?

e have done, are doing, and will con- to do everything that we can do to our exhibition better from year to

u know that no one man, or number en possess all the good and wise ideas ive to a poultry exhibition, and right is where *you* can do us a kindness, and who want to put poultry exhibition the poultry business generally upon a er level and keep them there, by making suggestions for our exhibition that will be of benefit to the exhibitor or the management. I assure you such suggestions will be much appreciated.

There has been no desire upon my part in sending you this communication to disguise our selfishness, by platitudes or moralization, not at all, but it is an honor and a privilege to be in close relationship with an organization that has never lost the thought that the poultry business is deserving of the best efforts of every man connected with it, and the continuous effort to purge the business of anything and everything that tends to lower the highest ideals and best standards.—Frederick G. Davis, President.

Fargo, N. D., Show.

Prospects for the annual show of the North Dakota State Poultry Association, which will be held in Fargo January 15-22, 1915, were never brighter than at the present time.

This association is a state institution, receiving state aid, and is recognized as the big show of the year in North Dakota. The management has been formulating plans and arrangements since early in September and more enthusiasm and ginger is being displayed than at any time in the history of the institution, which continues back over a period of more than twenty years.

One of the greatest drawbacks which the management has always had to contend with has been the securing of a showroom which would be well located from the standpoint of paid admissions as well as convenient and well fitted quarters for the comfort of the exhibitors. An excellent location has been secured for the coming exhibition, located on Fourth Street and Northern Pacific Avenue, directly east of the offices of the Horton Motor Co. The building has three floors, 37x100 feet, which can be entirely utilized for the show, giving a total floor space of over 11,000 square feet. Steam heat has been installed, insuring a steady temperature in the showrooms with the best of ventilating facilities. The building is completely wired for electricity and a large freight elevator will be used in moving exhibits from one floor to another.

Mr. E. G. Roberts, of Ft. Atkinson, Wis., will officiate in the capacity of one of the judges, the other not having been secured at the present time.

The directors of the association have secured the services of C. A. Nash, secretary of the North Dakota State Fair Association for Fargo, as business manager and promoter of the show. Many requests for premium lists have been received by Mr. Nash and the book will be mailed in about fifteen days, or as soon as it is received from the printers.

Iowa's Greatest Show.

The Jubilee Show to be held at Cedar Rapids, Iowa, January 12-18 marks the twentieth annual exhibition held in this city by this association, and plans are being made for the largest and best exhibition in its history. Dippel, Tucker and Shanklin are the judges. All fanciers are most cordially invited to make an exhibit. For copy of premium list address E. E. Richards, Secretary, Cedar Rapids, Iowa.

All this is a natural result of my 15 years of consistent effort to improve the high standard of quality to meet the public demands of tomorrow instead of yesterday. Catalog free. Quotations by wire when necessary.
C. S. BYERS (Orpington Specialist 15 Years) HAZELRIGG, IND.

Freeport, Ill., Show.

The Freeport Poultry Association have completed their arrangements for the holding of their annual show December 14-19, 1914. The premium list is ready and anyone wanting one can get it by dropping a card to the secretary, Paul Wurtzel, Freeport, Ill.

The Freeport fanciers are going to have one of the best shows in the state. They will again have uniform cooping, coops furnished free, and comparison system of judging. They have engaged Judges Heyl, Hackett, Rountree and Shaner. This will insure a correct placing of all awards without the necessity of waiting until the last day for same. Everything will be completed by Wednesday evening. That will give the exhibitor a chance to put up his cards early in the week and get some advertising out of his exhibit.

One hundred dollars of silver cups will be awarded. Four hundred dollars' worth of merchandise premiums will be placed. Three hundred dollars in cash premiums will be paid. Is there any show that will do better?

The Freeport Association has secured the state meet of the Rhode Island Red Club of America and Red breeders are urged to send their birds to the Freeport show, where there will be some real competition of high-class Reds. One hundred dollars' worth of cups and special prizes will be awarded in the Red class besides the state cups, statuettes of the national secretary and the cash premiums. It will be a great show. Send your birds.

For premium list, entry blank, shipping tags, etc., write to Paul Wurtzel, Freeport, Ill.

Boston's Big Show.

It was expected the premium list for the Boston show to be held January 12 to 16, 1915, would be out December 1, but the large number of specials received late may delay it a few days. In addition to the number of specialty clubs previously announced as voting for Boston for their annual meets, the Partridge Plymouth Rock Club is coming to the Hub, and word has just been received that the American Barred Plymouth Rock Club will probably decide on Boston.

Hundreds of dollars are offered in specialties. There is over $200 on Hamburgs, nearly as much on Barred Plymouth Rocks, $75 on Light Brahmas, $75 on Buttercups, specials galore on Bantams, between $300 and $400 on water fowl, and the usual generous prizes on Wyandottes, Orpingtons, Leghorns and Crested Breeds. The prizes on utility fowls, dressed poultry and eggs are the same as last year.

The Massachusetts Agricultural College will have a much larger exhibit than a year ago, one feature being a model 10-acre poultry farm occupying over 700 square feet.

Another new feature will be a moving picture show each evening of the Government Poultry Farm. This will consume about 20 minutes. Entries close December 28. W. B. Atherton, Secretary, 36 Bromfield Street, Boston, Mass.

The International Single Comb Rhode Island Club will hold its annual meeting and election of officers in connection with the Chicago Poultry Breeders' Association, January 14th to 20th, 1915. The club meeting will take place on Monday, January 18th, at 10 a. m., and there will be elected at this meeting a president, three vice presidents, a member of the executive committee for three years, and such other business transacted as may properly come up before the meeting. At this show will be held the Illinois Official A. P. A. State Show and meeting, also other National Poultry Club meetings. Undoubtedly there will be a large class of Reds. The club is offering and will pay $105 in cash special premiums on a basis of 250 Single Comb Reds in class. Single birds count one; pens count five. J. H. Valliere, secretary, Cedar Rapids, Iowa.

The S. C. White Leghorn Club of Central New York is offering a set of special ribbons at poultry shows this season, the competition for which is open only to members of the club. They will be offered at any show applying for the offer. If your show has not already received our offer you should write to the secretary at the address given below for the offer. Breeders of S. C. White Leghorns should join this club and compete for the specials, also receive other benefits of membership. For further information send for free club catalog. Membership fee $1.00. Address Edwin H. Chase, secy.-treas., R. D. 1., Edmeston, N. Y.

The Seventh Annual Exhibition of the Southern Wisconsin Poultry Association will be held in Janesville January 11 to 16, 1915, with Mr. E. G. Roberts as judge. The judging will be by comparison and it is hoped that this will be the largest and best exhibition given by this association. Yours respectfully,

Southern Wisconsin Poultry Association,
By E. M. Erikson, Secy.

THE DOUBLE MATING SYSTEM.

The Double Mating System Is Now Practiced by All Successful Breeders of Barred Rocks and Brown Leghorns and by Some Breeders of the Penciled Varieties.

CHAS. A. SIMMONDS, CAMP POINT, ILL.

ABOUT ten years ago both single and double mating advocates could be found in the ranks of successful breeders of all parti-colored varieties, but today we find the Barred Rock and Brown Leghorn breeders agreed on double mating, but the breeders of Partridge and Silver Pencilled varieties are still divided. The most successful breeders of the last named varieties use single mating and there is no reason why anyone should double mate these varieties.

All that is necessary is to select breeders from a line of blood that is noted for producing good colored birds of both sexes and select them as near as possible according to standard color. Always give preference to cockerels that as chicks were well pencilled but after moulting into their adult plumage were nearly solid black on breast and body. But with Barred Rocks it is very different. The Barred Rock is a black fowl with white bars, the two colors being intermingled, making light and dark gray, and the cockerels inherit a tendency to barring from both parents, while the pullets inherit it only from their dams. This makes the cockerels twice as light in color as their sisters. By carefully mating by the single mating plan one can change this tendency in the cockerels to be twice as light as the pullets, but he is working against nature. But by double-mating, nature is taken advantage of and so the work of breeding is made much easier.

It is not such a disadvantage to have to use the double mating system as some suppose. The trouble is that too many breeders try to make both matings when they should only make one. Breeding both the cockerel and pullet lines is the same as breeding two different breeds. Each requires different mating and one must exercise care that the lines do not mix or cross. So for one who can only mate a few pens each season it is much better to breed only the cockerel or the pullet line, as he can then make all matings for producing either exhibition cockerels or pullets and has a much greater chance for success than if carrying both lines.

To mate a pen for producing exhibition cockerels, select a male as near standard color as possible. If he is a little dark and narrow barred it will not matter, as very few females are dark enough for mating to produce the exhibition cockerels. The important point is that he should be barred to the skin and clean barred. That is, there should be a strong contrast between the light and the dark bars without any tendency towards intermingling.

The male bird should also be very strong in comb and head points, as he will have more influence upon these points in the progeny than the female. His legs should be a rich yellow without any dark spots and he should be as near standard shape and size as possible.

In selecting the female select a bird twice as dark as the male. Her light bars should be as narrow as possible, fifteen bars to the feather is none too narrow. In attempting to get females dark and narrow barred, however, do not be tempted to use any that are smutty or dull barred. Always select those having clear, snappy color, the dark bars as black as possible but the

Ferris Leghorns for Egsg

Compare a pen of Ferris White Leghorns with your present stock. You will get more eggs from the Ferris stock because their laying qualities are the result of 14 years' careful breeding.

Prices Reasonable

Heavy laying breeding hens and pullets $2.50, $3.50 and $5.00; cocks and cockerels $5.00, $7.00 and $10.00. A trio at $10.00, $15.00 or $20.00 will give you a splendid start. See catalog for complete description.

All stock sold on approval, and insured for 30 days. Return birds within 3 days, at our expense if not satisfactory, and money will be refunded.

Winners at 14 big shows during the past year—40 first prizes and 46 second prizes. See catalog for list. Let us quote you prices on winners for your show.

Free catalog tells the whole story. Testimonials from every state; complete description of how we developed laying and exhibition qualities. Shows views of farm and buildings, describes the birds we have to sell and gives all the information you will want before buying. GLOBE INCUBATORS make MONEY

Are **you** making money from **your hatches**? If not, something must be **wrong!** It may be that you are hatching with hens or the **wrong** kind of an incubator. Buy a **GLOBE OUTFIT.** It will pay you well. You **cannot** expect to have **good** hatches from any old kind of an Incubator. You must have a machine that is **built right** and one that has the **right heating system,** in order to produce good hatches and strong healthy chicks that will **live** and **grow.**

The **leading** Poultry raisers of this country have found that it does not pay to use hens for hatching. You, too, must agree that it doesn't pay to have a lot of good laying hens sitting when they might just as well be laying more eggs while your incubator hatches.

A good Incubator is a very **profitable** investment, because it is one of the most useful adjuncts to the Poultry Business, and you must not lose sight of the fact that Poultry raising is one of the greatest industries in this Country. It is becoming more and more profitable each year. During the next year poultry and eggs will bring higher prices than ever before. Get in line to reap some of the benefits of the high prices by buying a **Globe Outfit** now.

The **Globe Machines** have for years been giving the best results obtainable. The **Globe** will hatch eggs far cheaper than you can do it with hens, because it is built right and has the proper heating and regulating apparatus.

In the Illustration you can see how the famous **Globe Hot Water Heater** is installed, it will give you an idea of its superiority over any other make of Heater. **All Globe** machines are equipped with the Hot Water System.

Salesman explaining to customer the merits of the Globe Hot Water Pipe Heating System.

We have added the Globe Junior Incubator to our line and now have an Incubator or Brooder to fit every pocketbook. Prices from $4.75 up.

Send 15 cents for our 1915, 208-page Incubator, Brooder and Poultry Catalogue, (or write for prices for what you want,) it contains many new cuts and views of our Factory and Poultry Farm. It also gives a host of valuable information in regard to Running Incubators and raising Poultry. You cannot afford to be without it.

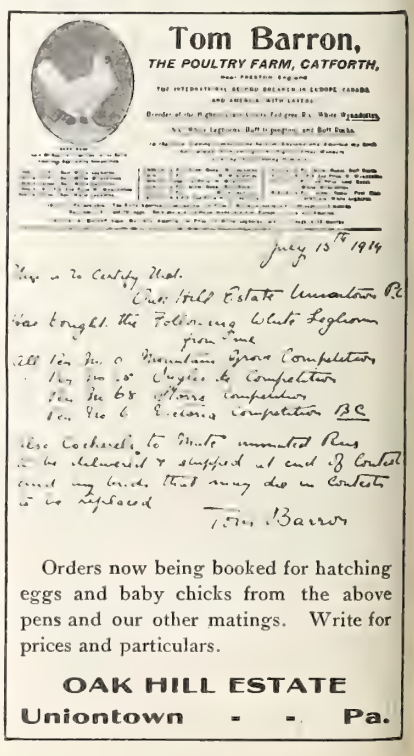
C. C. SHOEMAKER, Freeport, Ill., U. S. A.

Write for literature and prices on **Exhibition Coops**

light ones distinct and well defined. I repeat that the dark bars should be black (without showing any metallic sheen) as it is the black barred female that produces cockerels having the much desired gray-blue barring. Look well to the size of the female, as she will have most of the influence upon the size of the progeny. In shape she should be long bodied with a full round breast, low, well spread tail and stand well up on the legs. After looking well to other points it is an advantage when one can select the cockerel breeding female with a good comb, red eye, and yellow legs free from dark spots, but ninety per cent of the breeders pay too much attention to these points. The male has much more influence upon the combs and eyes of the progeny than the female. Even though the female's legs are very dark, if the grand color is rich yellow and the male's legs are yellow the cockerels in the progeny will be nearly or entirely free from this defect.

When mating a pen for producing exhibition pullets the females should be selected as near standard color as possible. The dark bars should be blue-gray in color and no wider than the light bars. The female should be of good size and as near standard shape as possible. Her legs should be a rich yellow as free from dark spots as possible. The same rule as to selecting for head points applies in the pullet breeding as in the cockerel breeding female. These points should be as near standard as possible, but are the last to be considered, as the male has the most influence upon these points in the progeny. In selecting the male to mate with this kind of female, select a bird twice as light as the female. He should be light in color, but not faded or whitewashed. The dark bars should be narrow but distinct, well defined and barred to the skin. He should have the same number of bars to the feather as is desired on the females he is to produce. Also the same parallel bars and ringy effect. He should have rich yellow legs, red eyes, and be extra good in comb and head points. Be especially careful to select a male having a firm, straight comb, as where a male's comb falls to one side a little, it is generally the rule that this defect is intensified in his female progeny.

Such matings as these can be relied upon to produce a large per cent of high class exhibition specimens where the blood lines behind the birds are right. But it must be remembered that the ancestors of the individual used in any mating come in for a large influence upon the progeny.



First cockerel, first pullet and first hen at Indianapolis, Ind., 1914. These winnings made in a very strong class of White Wyandottes. Bred, owned and exhibited by Chas. V. Keeler, Winamac, Ind. Above picture made from painting by Burgess.

MORE ABOUT UNRETOUCHED PHOTOS.

Editor American Poultry Journal,
Chicago, Ill.

Dear Sir: You are certainly setting the pace by tagging your illustrations and cuts in your magazines. The cuts of today are too much faked and the amateurs especially, of which I am one, will welcome this innovation because one is influenced sometimes by the cut or illustration accompanying the advertisement. I hope you will confine this to your advertising matter as well as to your cuts along in your reading matter. Please don't stop half-way. Because why fix up a photograph any more than washing a bird because they are not the natural way one sees them in the breeding pens. I think a breeder who does not have his cuts fixed up will welcome this too and will want it put in with good type in his ad. I enjoy your paper very much and although in the poultry business in only a small way, enjoy honest ways.

Yours very truly,
Leon J. Brown.
Binghamton, N. Y.

Will Schadt and His Chickens.

ill Schadt lives down in the land of hen, Ind., and is known from one of the state to the other as one of ana's famous fanciers. He also finds to edit a fine poultry paper, the ltry Post, and we believe is the only or connected with the poultry indus-who is also a large breeder of thor-bred fowls. On account of this he ngs in the major league for dispen-poultry knowledge and backing it with high class stock. His White ingtons, which he breeds by the hun-ds, are raised on a farm which has y advantage for producing high-grade imens and as Mr. Schadt is a con-sieur of everything that is good, his ingtons are naturally as good as you find anywhere.

hat we have said about his Orping-applies also to his White Wyan-es and Rhode Island Reds. He has a great number of these birds hav-fine type and color. Ideal conditions, tary methods of feeding and housing esponsible for the remarkable vigor-condition in which we found his s. A large number of baby chicks, k and eggs which he sells each year n ever increasing list of customers tered from the Pacific to the At-ic is absolute proof that he delivers goods.

is circular and mating list is sent to anybody applying for it and it ell worth sending for as it contains plete information regarding his meth-ods and prices. Just now he has a fine lot of youngsters in all varieties that have exceptional quality for the price he is charging and a letter addressed to him, Department No. 7 Goshen, Ind., will bring the desired information.—L. A. Stahmer.

Guard Against Disease.

Reports from various quarters indicate that there has been rather more than the usual run of poultry diseases this fall. Roup is most general of all, and, as usual, is gathering its heavy toll of chicken life.

In the East and South, Chicken Pox, or Sore Head, as it is called in the South, has broken out with unusual severity. Both these diseases are to be expected at this season, and unless extra precautions are observed in the way of thorough disinfecting and giving preventive remedies, one need not be surprised if there is an outbreak among his chickens. Well-known remedies for these diseases are Pratts Roup Remedy and Pratts Sore-Head Chicken-Pox Remedy.

If Chicken-Pox or Roup is in your neighborhood these remedies should be used anyway, as they are sure preventives.

For disinfecting purposes, Pratts Poultry Disinfectant is unequalled and its price—about a penny a gallon when diluted with water—is so low that frequent spraying, which should be the rule in every poultry yard, can be made a weekly practice. If this is done, lice, mites and the germs of disease are not likely to prove troublesome.

At this time, when there are outbreaks of these contagious diseases it is of even greater importance to maintain healthy, thrifty stock. Good health is one of the best disease resisters in poultry as in man. Heavy feeding for eggs is so general a practice that a dependable regulator is almost as essential as the mash itself. Indeed it should be part of every mash whether designed for developing, laying, moulting or fattening.

To show how this should be done, here is a laying mash used at the Pratt Experiment Station, of Morton, Pa.: 20 lbs. bran, 10 lbs middlings, 10 lbs. cornmeal, 10 lbs. ground oats, 10 lbs. beef scrap, 5 lbs. oil meal and one third of a 50-cent package of Pratts Poultry Regulator. Pratts Regulators and Remedies have ac-

quired their splendid reputation by nearly half a century's use. They were the first to guarantee to give money back if users were not satisfied. Today they are the one line with a world-wide use and in this country alone are handled by nearly 40,000 dealers. If you do not know the Pratt dealer near you, write to the nearest office of the Pratt Food Co., Philadelphia, Chicago, Toronto, and your requests will be given prompt business-like attention.

Are You Getting Plenty of Winter Eggs?

Winter is the time when farmers and poultrymen ought to make the most profit from their hens, because the price of eggs is then at its highest. Unfortunately, eggs are scarce in winter. Why is this and can it be remedied?

Dr. Gilbert Hess is giving us the why and the remedy in his vigorous talks throughout the agricultural press. First of all, Dr. Hess explains that moulting leaves hens in a weakened condition. Next, there is the lack of green stuff in winter and the hens are also deprived of exercise. Under those conditions the Doctor asserts that the egg organs of the hen become dormant or inactive or she becomes lazy and puts on fat instead of converting her feed into eggs.

As most of our readers probably know, Dr. Hess has compounded a preparation to remedy these drawbacks. His famous poultry tonic, Dr. Hess Poultry Pan-a-ce-a, which has now been on the market over 23 years, has made a fine record for itself.

Dr. Hess Poultry Pan-a-ce-a tones up the dormant egg organs, keeps the hen in a healthy, active condition, overcomes the weakening effects of moulting and, by supplying her with the necessary tonics, laxatives and internal antiseptics, helps her give a bountiful supply of eggs during the winter months.

What strikes us as particularly strong about Dr. Hess Poultry Pan-a-ce-a is the broad money-back guarantee under which it is sold: "If you are not absolutely positive," says the Doctor, "that my Pan-a-ce-a has paid you and will do you well take the empty package back to my dealer in your town and he will refund your money." The cost of feeding Pan-a-ce-a is scarcely to be considered—a penny's worth daily is enough for thirty fowl.

Ewing & Romich, Creston, Ohio, have Silver Laced Wyandottes that dazzle the eyes of the most exacting. They are laced all over, body, fluff and all. They

A flock of fine thoroughbred Bronze Turkeys growing on the range of Bird Meyersdale, Pa. This is one of the many flocks of fine breeders and prospecti winners they are preparing for their customers.

are of wonderful type, great size and ideal head points. I never saw better in any show room. They can furnish and young stock that can win anywhere. If your lacing needs bringing out, don't fail to get a pullet-breeding cockerel from them. Write for prices and mention A. P. J.—H. H. Coburn.

A. A. Carver, Seville, Ohio, is in fine shape to furnish wonderful quality in Rose and Single Comb R. I. Reds or any show room. Mr. Carver certainly has the science of mating Reds for year improvement. It is my pleasure to visit him several times a year and I keep a fine on his Reds—and he has some top-this year. Last December he made a great winning on Golden Campine at Chi-

French's Poultry Mustard

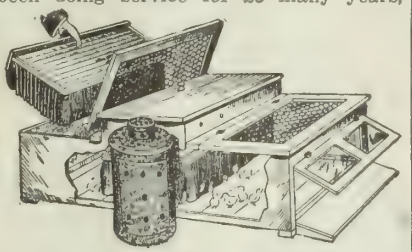
The Original Poultry Mustard in America. Absolutely pure and prepared to produce most excellent results. Used and highly recommended by thousands of breeders, fanciers and practical poultrymen the world over.

Can Be Fed Any Time of the Year

Most satisfactory results have been obtained by its liberal and constant use. It stimulates and invigorates. It rebuilds and strengthens lost and waste tissues; It SHORTENS THE MOULTING PERIOD, and starts the hens laying. A fair trial will convince you of its worth. Avoid counterfeits and don't accept substitutes. Insist upon having **French's Poultry Mustard.** Buy it from your dealer, or send to us direct.

Our 32-page booklet giving Mr. Ralph Allen's experiments in England, together with other articles on Mustard and testimonials from prominent poultry raisers is sent free of charge for the asking. Write for this today. Address

The R. T. French Co. **Department A** **Rochester, N. Y.**



cago, and has some beautiful Goldens this year. He can fit you out in winners for any show room. Mr. Carver was one of the first to take up Red Sussex and has done his share for this wonderful breed. He later went in for Speckled Sussex and is secretary for the Sussex Club. The Carver R. I. Reds have won in twenty-five states and can win anywhere any time. Write for prices on exhibition and first class breeding stock in any of the above named breeds.—H. H. Coburn.

Woolery Farms.

Woolery Farm, Bloomington, Indiana, owned and managed by Dr. Woolery and nephew, Ralph Woolery, has come to the front with such rapid strides as to be nothing short of phenomenal. When we visited this farm in September they had upward of 1,000 young White Orpingtons of the most promising quality. Old White King, now in his fourth year, is just as young and as white as he used to be. He sired the great cock that won first at Cincinnati at the National Club Show, 1913. He headed pen 3 last season. He sired the first Illinois State Fair cockerel, 1913, which headed pen 1. Judges Hewes and Pierce pronounced him the best White Orpington cockerel they had ever seen. And as a yearling cock, he still retains his wonderful quality and his young stock is among the best ever raised. Old White King sired first prize cockerels for over 20 shows, among them: St. Louis, Cincinnati Decatur, Indianapolis and Columbus. He headed yard 4 last Spring and among the beautiful females in his pen were 1-3 Cincinnati pullets, 2nd Chicago pullet and other good ones. The above shows how the Woolery young Orpingtons are bred and what we can expect of them, both in the show room and breeding pens. We just mention these few individuals in passing but there are others in plenty. We must not forget the second grand victory at the Illinois State Fair last September. Woolery Farm won 1-3-4 cock, 1 hen, 1-3-4-5 cockerel, 2-4 pullet, first young pen and 2nd old pen. If you want first class White Orpingtons write Woolery Farms, Bloomington Ind., and mention A. P. J.—H. H. Coburn.

Something New in Brooders.

We are gratified to note that somebody has had enough of the progressive spirit to build a brooder that is different from the same old type of brooder that has been doing service for so many years,

and we cannot help feeling that the new Klose-Kontact, Fresh-Air brooders which The Buckeye Incubator Co. recently put on the market are going to save a large percentage of the chicks which most of us usually count on losing.

These new brooders are built after nature's own plan with a warm contact over the backs of the chicks and absolutely free ventilation under all conditions. They are very simple in construction and so arranged that they are practically self regulating. The Buckeye Incubator Co. have published a splendid description of it in their current catalog and it should help every breeder to at least read the claims that are made for this style of brooder construction. They certainly look logical and you can get the catalog for nothing by addressing the manufacturers at Springfield, Ohio. Just ask for a catalog of the Kant-Krowd, Klose-Kontact, Fresh-Air Brooders.

Rawnsley-Shields Poultry Farm.

About 4 miles out the city of Columbus, Ohio, on the Delaware Electric line, we find the farm of Rawnsley-Shields. It is ideally located and altogether an up-to-date poultry farm. The very name of the firm guarantees the quality of their Buff Orpingtons and Red and Speckled Sussex. Mr. Rawnsley, one of the greatest raisers in America, grades and divides the stock according to size so as to keep them growing every minute. And he had young stock exceptionally well grown for the Hagerstown Fair, Oct. 13-16. There is no better authority in the country than Mr. Rawnsley on English breeds, especially; and he is the most expert conditioner and puts his birds in shape to win, and wins. On S. C. Buff Orpingtons he won 1st cock, 1-2-3 cockerel, 1st old pen, 1st young pen, 1-2 hen, 1-2 pullet. The class was the strongest ever shown at Hagerstown or any other early show and besides the above they won champion male and champion female of all Orpington classes, and to cap the climax, were awarded cup for best bird of the whole show, with 7,574 birds competing. This championship was won by 1st Buff Orpington cockerel. It is safe to say this cockerel is the best Buff Orpington cockerel ever shown, as was admitted by all judges, exhibitors

THE MILLER FRESH AIR HEN HOUSE

Ready-made—Comes in sections—Bolts together in few hours' time—For city and country, very attractive It's the latest improved and most practical hen house on the market. Write for printed matter on portable hen houses, garages, barns, cottages, corn cribs and sectional buildings of every description. Write today. The Miller Manufacturing Co. 8001 Alabama Avenue, St. Louis Missouri.

and breeders the finest ever seen by them. He is wonderful in type, perfect color, fine point comb, red eyes, over standard weight and in the pink of condition. The championship hen weighs 10 pounds and is one even sheet of golden buff to the skin; sound tail and flights, with grand type and neat head. She and the cockerel are a great team. What would you give for eggs from this mating? The Red and Speckled Sussex shown were well grown though very young. Mr. Rawnsley, with his great knowledge of fancy poultry, saw what there is in Sussex for the fancier and utility farmer, so is among the first to adopt them. He sold his entire stock of Light Sussex and is now breeding the two varieties, admitted to the standard. At Hagerstown, the Rawnsley-Shields Farm won on Reds, 1st cock; 1-2-3 hen; 1st cockerel; 1st pullet. No pen shown. Speckled Sussex 1st cock; 1st hen, 1-2 cockerel, 1st pen. Write for prices on Buff Orpington show cockerels.

H. H. Coburn.

Here Is a Real Christmas Present for Any Little Girl.

We have just learned that the Neponset House which is sold by Bird & Son as an advertisement of their business was really designed by one of the leading architects of the United States. As Bird & Son are manufacturers of building products, Neponset roofings, wall board, shingles and building papers, it is only natural that anything of this sort which they have put out would be correct in design and construction. For this reason the little Neponset House is more than a toy.

It is an exact reproduction of an old Colonial house, white in color with green blinds and solid red chimneys. The back is open like any doll house, making it a useful as well as an attractive and ornamental toy.

On one of the wooden sills there is tacked a tiny name plate, "The Neponset House," but outside of this the house is not marred in any way by advertising.

One would never suppose it was an advertisement.

The house is shipped all taken down and packed flat in a strong Neponset Fibre case complete. Everything for putting it together is included so that the purchaser need supply only the hammer. The assembling of it is great fun for the old people and can be done in from fifteen minutes to half an hour. The dimensions are 2 feet 6 inches long by 1-foot 3 inches wide by 1-foot 7 inches high.

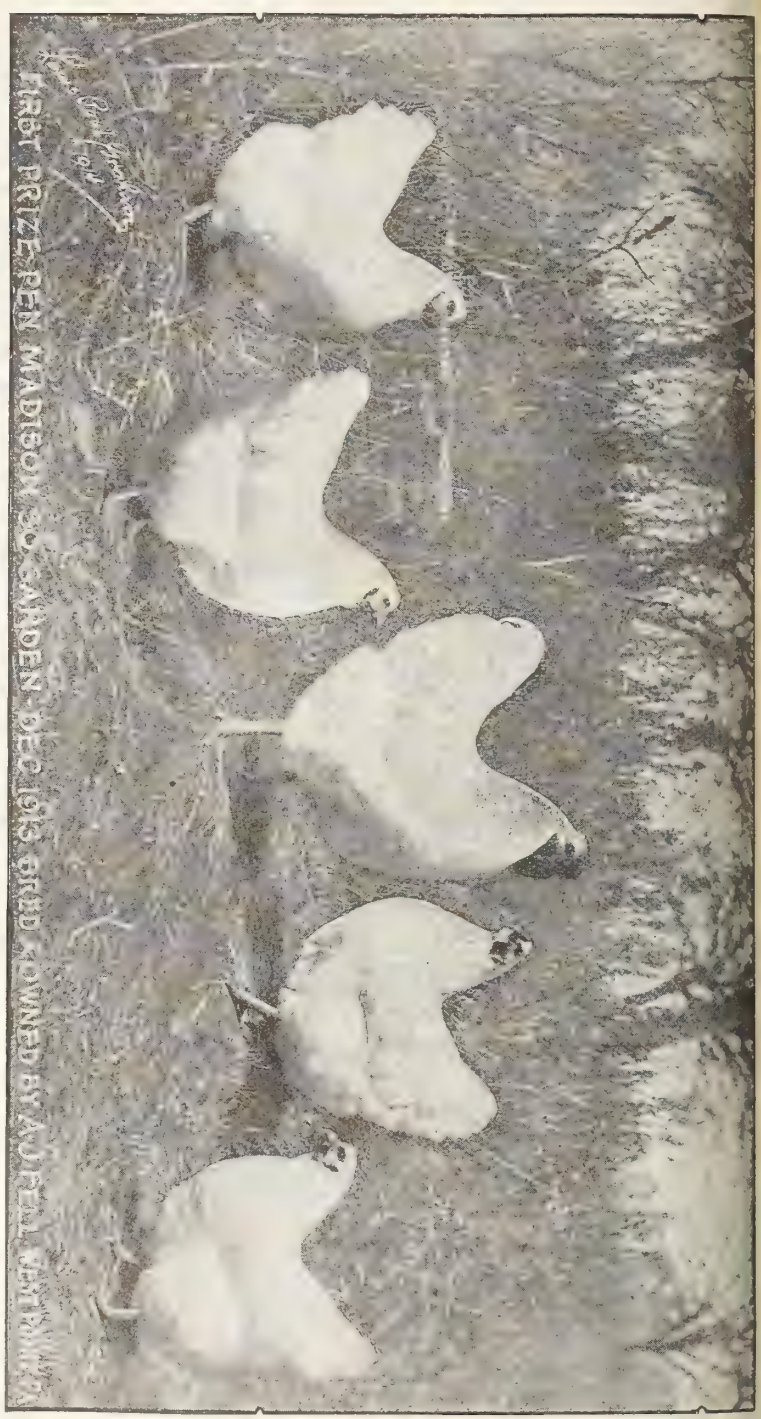
Many of the Neponset dealers are carrying a stock of these houses or they can be obtained direct from Bird & Son at East Walpole, Mass.

One of War's Lessons.

The movement of vast forces of men, horses, ammunition, huge siege guns weighing tons, food and supplies, with marvelous rapidity—all point to the great value of one thing—organization.

The more are efforts united, the greater is the success of all concerned. The greatest economy of production, operation, transportation result.

They say the pen is mightier than the sword. So's the ploughshare. And as absolutely necessary to the nation as are our farmers and poultrymen, there's no reason why organization for them would not prove as economical as for the military. The fact is that this is recently proven correct. The Certified Farms Co., with offices at 26 W. 59th St., New York City, is growing by leaps and bounds. Originally founded for the purpose of selling eggs and dressed poultry direct to the consumer, at a minimum of cost in advertising, equalizing the supply to the varying demand, and giving a backing to the sale of these goods that the customer would appreciate, this concern has recently expanded in a way that should interest every poultryman within a day's journey of New York.



The eggs sold by this corporation are guaranteed strictly fresh when delivered to the customer, and to come from healthy hens in sanitary quarters. The dressed poultry is all that would appeal to the most expensive taste. In other words, the slogan, "Certified Eggs From Certified Farms" means something. As stated above, the value of co-operation in this venture is evidenced by growth by leaps and bounds. The directors are forced to expand the business. They need the help of other poultrymen, and can offer something great in return.

Elsewhere in this paper you will find the advertisement of the Certified Farms Co. Read it and send for the literature offered.

Organization certainly counts, especially in the poultry line. You should learn more of the advantages of dealing with this concern which buys from you, paying highest prices and sells to you, at lowest prices.

Gensemer Bros., Creston, Ohio, have some wonderful Silver and Golden Campines. I noticed some of the best hens and pullets I ever saw. These Campines will again do the honors for them at the coming Chicago show, where they made a great record last December. Do not fail to get one of their cockerels for the show or breeding pen. Gensemer Bros. have the distinction of being the only breeders of the four varieties of Sussex, viz., Red, Speckled, Light and Brown. They have some fine specimens in these wonderful utility breeds. The Reds and Speckled are on one farm and the Brown and Light on another. They are loud in the praise of Sussex as the most delicious table fowl, and the vigor and quick growth of Sussex chicks.—H. H. Coburn.

Simmons & Crittenden, Geneva, Ohio, whose Rose Comb Reds have won at Madison Square Garden and other large shows, have most forcibly illustrated their quality in the young stock raised the past season, which is the best they ever had. The old breeds are coming very dark, rich red and they have some wonderful hens and cock birds. They have cockerels and pullets that can win in any show room, so if you want birds of the best quality, write for prices. They are prepared to furnish first class breeders in large and small numbers. One or more of the grand cock birds used by them in last season's matings will do wonders for your young stock next season, in vigor, type, size and color. They are mating the best pens ever mated and can take care of any size egg order. Write them, stating in first letter just what you want.—H. H. Coburn.

This Pen shows the great Wyandotte type and wonderful uniformity of the famous Fell White Wyandottes, it is probably the best matched and handsomest pen of the variety ever under the Blue in Madison Square Garden. Mr. Fell's consistent winnings at New York during the last five years prove the Fell White Wyandottes to be the leading First Prize Winners. Out of 20 possible First Prizes they have won 12 which is proof enough of their quality.—Louis Paul Graham.

All interested in poultry will subscribe. **POULTRY POST** is recognized as the best 25 cent poultry journal. Many Agents earn several pens of fowls and a share in the cash prizes working at odd times. **You can do equally as well.** Write for our liberal proposition. **POULTRY POST,** D30, **GOSHEN, IND.**

The Economy Exerciser & Feeder

Is different in construction and operation from all others. It has no bait cup.

The fowls get the grain by scratching which gives them exercise in the natural way, and the grain distributor has very accurate adjustment, so that you can make them work just as long and just as hard as you wish for their feed. The Economy Exerciser and Feeder is all metal and perfectly weather-proof, rat-proof and sparrow-proof. It is equally good for old and young chickens and used either with litter of any kind or on the bare ground or floor.

Chickens can operate it as soon as they are large enough to eat wheat or cracked corn, and fowls of any age soon learn that scratching around the chains brings down the "eats." Made in two sizes:

No. 1, capacity one-half bushel...$2.50
Shipping weight 30 pounds

No. 2, capacity one bushel $3.00

Examine Birds Before You Pay for Them

So sure are we of pleasing you with the high quality of our stock, we are perfectly willing to send any shipment to you C. O. D. subject to your inspection before you pay for them. Our records show by this method that fully 99 per cent of our shipments are accepted. We challenge any breeder to show as good a record. We sell birds on their merits and we will sell to you if you give us a chance. Our Special Sale Circular tells about 2,000 birds we offer for sale and includes cocks, cockerels, hens, pullets, pens, trios and single birds, just as you wish them. We can furnish exhibition birds for any show or good utility breeding birds. Send today for a copy of our Sale Circular giving you reduced prices on every bird we offer.

Goshen Poultry Farms, R. F. D. No. 7, Goshen, Indiana

The Duplex System.

Breeders everywhere are awakening to the wonderful possibilities of Colony Brooding. Thousands of them have adopted this system only to be surprised with results. Not only did they find that larger and better chicks could be raised but they also found that this system saved them three-quarters of their time and reduced the expense for fuel.

These factors in themselves are enough to make it worth while for all breeders to adopt Colony Brooding, but there are numerous other things which makes it a wonderful factor in the success or failure of the business. Not the least of these is the broiler possibilities. With a Duplex Stove and Ventilator installed, it is an easy matter to raise broilers. In fact one thousand broilers can be produced with less labor around one of these stoves than is possible in any other way. It positively is less work to care for 1,000 chicks around a Duplex in December and January than it is to care for 200 in any other way even during the Summer months. This makes Winter Broilers in profitable numbers an attractive possibility for all poultrymen.

The Duplex Colony Brooder Co. has prepared a little booklet which they will gladly send you with their catalog which will give you all the information you may desire regarding this splendid system of brooding. This is their second year season and prospects are for more orders than they can handle, so we advise our readers to write for their literature at once so as to be able to get their orders in early. Mention this paper and address the Duplex Colony Brooder Co., Box 614, Rockford, Ill., and you will get literature which will mean the difference between success and failure on your farm. It will surely increase your profits and reduce your labor.

The Old Forge Poultry Farm.

We have made our second visit to the Old Forge Poultry Farms, Spring Grove, Pa., and trust the future will have several more such trips in store for us. This visit was particularly interesting for it offered us the opportunity to note conditions and the improvements made which were most pleasing.

This line of Buff Orpingtons has been greatly improved. They were a very choice and select lot last year and the year before and they are better today, in type, color and size, the uniformity is especially worthy of comment.

This season Mr. Glatfelter has entered the show ring early exhibiting his birds at Cleveland, New York State Fair, Allentown, Pa., Tri-State Fair, Trenton, Hanover and Lancaster, where he made a record unequalled for this variety by winning 20 first prizes, 18 seconds, 11 thirds, 5 fourths, 5 fifths and 9 specials on a total of 63 entries and winning all ribbons possible but four. For practical value also this line has made a record at the North American Egg Laying Contest, his birds have led the class from the start and are now leading the division by over 100 eggs.

This year's breeding has been most successful, the young show exceptional values and Mr. Glatfelter is offering a fine lot of breeders and exhibition birds for sale. Write him your wants.—H. P. Schwab.

Winter Laying Hens.

Did you ever stop to think that perhaps hens stopped laying in the winter because they didn't get the kind of food they liked? Hens aren't really happy if they aren't properly fed.

If you want your hens to lay plentifully this winter when eggs are 50 cents or more per dozen, it is up to you to provide them with egg making food. Hens need grain all year round, but they can't do good work on grain alone. A certain amount of animal protein is also needed.

Most hens are happier in the summer than in the winter. Their chief cause for joy is in the abundance of bugs and worms they find during the warm weather. You know yourself how pleased a hen is when she finds a nice plump worm or beetle.

Animal protein is found in all the bugs and worms the hens eat in summertime, and animal protein is the best egg builder known.

The cheapest, best, winter protein food for bone is cut green bone. You can get green bones from your butcher for next to nothing. Cut the bone in a Mann bone cutter and you will have a food that

rsuade most any hen to lay in
ne coldest weather. Hens fed on
cut bone are happy, profit-paying

inn Bone Cutter equipped with the

The Home of Perfections.

A visit to Rudy Farm, the home of Perfection White Wyandottes, will prove interesting and instructive to poultry breeders. This farm consists of 300 acres located near Mattoon in the heart of the best land in the state over which the Perfection White Wyandottes have free range which accounts for the vigor for which they are noted. Mr. Rudy has recently enlarged his poultry buildings by adding a long laying house 100 feet in length and 10 new colony houses. He has also installed a high pressure water system to supply fresh water from deep wells to all parts of the farm and the buildings are all equipped with electric light and power, making it one of the most modern and completely equipped farms in the state. Besides his poultry business, Mr. Rudy has a herd of Holstein cows and supplies the large dealers, as well as the retail trade of the city of Mattoon, with milk from his dairy.

Interested fanciers who find it impossible to visit his farm will be given an opportunity to see Perfection White Wyandottes in all their glory at the Mid-West Chicago Show in December. Mr. Rudy will display his birds at this show, which display will consist of about 30 pens of White Wyandottes in which will be placed over 200 Exhibition and Utility Birds of uniform type and color.

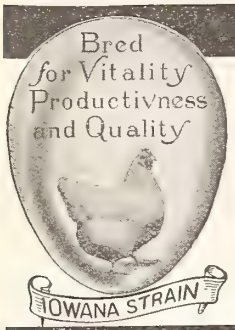
Mr. Rudy's success in obtaining the uniform type of birds is due to careful line breeding which he has been carrying on for several generations. He delights in selecting and mating breeders and often pays personal visits to his customers and assists them in mating their pens, thereby assuring good results in their young stock, as proper mating is the secret of reproducing true to type. If you are interested in White Wyandottes that are true to type and birds that will mature early, be sure and visit Mr. Rudy's display at the Chicago Show, or write for his complete catalog to the following address: Geo. H. Rudy, Box A, Mattoon, Ill.

M. C. DeLoof, Willoughby, Ohio, breeder and exhibitor of R. C. Reds of the best quality is in fine shape to supply top notch show birds and first class breeders. The DeLoof R. C. Reds are grand in type and head points and are rich dark red. He has a lot of especially fine cockerels, large bone, long back and the color that Rhode Island Red breeders strive to get. Write for prices on show birds, breeders and utility stock.—H. H. Coburn.

Animal food is absolutely essential to hens during cold weather. Right now, when they are deprived of beetles, bugs, worms, etc., we must see that the hen is given some good substitute.

There is no better food than fresh ground bone to produce a plentiful supply of eggs. And surely there is no food as cheap as bone. Think of the bones that we throw from our dinner tables. You can buy enough bone for 5 cents to feed from 15 to 20 hens.

One of the finest bone cutters that has ever come to our notice is the Humphrey—made by Humphrey & Sons of White Street Factory, Joliet, Ill This firm also publishes a mighty interesting book called "The Golden Egg." Our readers are urged to write to this concern for their booklet, for it contains much information on the care of poultry and gives many valuable pointers on egg production.



FIRST PRIZE COCK FIRST PRIZE HEN
WHITE WYANDOTTE WINNERS AT NEW YORK STATE FAIR SEPTEMBER 1914.
BRED AND OWNED BY JOHN S. MARTIN PORT DOVER ONT.

o produce winners year after year in any variety of poultry one must know the blood lines of his stock and have an intimate dge of the dominant and recessive qualities and characteristics of his breed or variety. We have observed the repeated winnings n S. Martin's Regal Strain of White Wyandottes at New York State Fair for eight or ten years past, where they have swept cks of practically all first honors each year. To be able to produce winning Wyandottes in this manner is no small matter. We that Mr. Martin has established one of the greatest strains of pure bred poultry in existence, which could only be accomplished eful scientific breeding and selection. Regal White Wyandottes have won for Mr. Martin and his patrons wherever they were and no doubt will continue to do so under the guidance and breeding operations practiced by Mr. Martin, which has brought so much glory and public favor.—A. O. Schilling. *Made from retouched photos.*

Box 200 **Elmhurst, Illinois**

INTERNATIONAL EGG LAYING CONTEST.

Report for the Month of October, 1914.

THE third laying competition which ended Oct. 31 proved to be by far the closest hen race ever held at Storrs. The three leading pens, namely Lincoln's Leghorns, Barron's Wyandottes, and the Storrs Station's sour milk pen of Leghorns all finished within five eggs of each other. The three pens taken together laid a total of considerably more than 6,000 eggs. Thus no one of the three pens was able to lay quite a quarter of one per cent more eggs than either of the other two.

The total production for the year for all pens, 820 hens, amounted to 117,902, which is an average of nearly 144 eggs for every individual that participated in the contest. The fact that some hens are better than other hens was most strikingly brought out in this contest. For instance, the average yield of the poorest competing pen of Leghorns was only a little more than 115 eggs per hen, whereas the average yield of the best pen of Leghorns was nearly 209 eggs per hen. If one compares the experimental pens it is found that the poorest pen of Leghorns yielded 55 eggs each, whereas the best pen yielded a little more than 208 eggs each, thus one is obliged to conclude that some hens are far superior to certain other hens, even though they are the same breed or variety.

Connecticut won first place for best individual work. A White Wyandotte owned by Merrythought Farm of Columbia, Conn., produced 265 eggs during the year. Massachusetts supplied the second best individual in a Buff Wyandotte owned by Dr. N. W. Sanborn of Holden, that laid 246 eggs, and the third best individual for the year proved to be a White Wyandotte owned by Neale Bros. of Apponaug, R. I. Thus it happens that three adjacent New England states have supplied the three best pens in a laying contest which included more than 800 hens from two countries and fifteen different states.

The three pens that finished strongest all laid within one egg of each other during the month of October. A Massachusetts pen of Buff Wyandottes won the blue ribbon for the month with a production of 129 eggs. A Connecticut pen of Rhode Island Reds won second prize for the month with 128 and an English pen of Leghorns came third with a yield of 127 eggs.

The Connecticut State Poultry Association offered a special cash prize of $50.00 to be awarded as follows: $25.00 for first, $15.00 for second and $10.00 for third best pen in the contest owned by members of the Association. Francis F. Lincoln of Mt. Carmel, won the $25.00 prize with his pen of Leghorns. Merrythought Farm of Columbia, won the $15.00 prize with pen of White Wyandottes, and A. B. Brundage of Danbury, president of the Association, won the $10.00 prize with his pen of Rhode Island Reds.

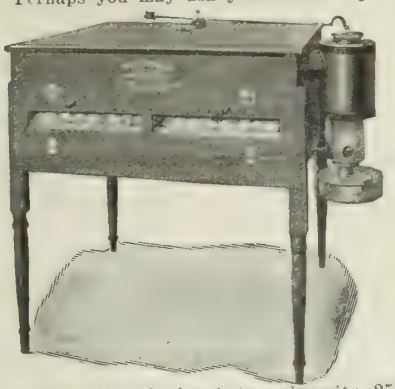
The Experimental Pens in the contest including as they did, five pens of White Leghorns and five pens of White Rocks, finished about as they have been going for the greater part of the year. The pens in both groups from which both green food and beef scrap had been withheld made the poorest yield.

New Styles of Cyphers Company Incubators for 1915.

—

I with are shown photographic illustra- of two new styles of popular priced ng machines that have been placed on rket by the well-known Cyphers Incu- Company of Buffalo, N. Y., for the sea- 1914-1915.

new Superior Incubators, as built uaranteed by the Cyphers Company, pper-tank hot-water machines. They ade in two sizes, holding 65 eggs and ggs. The new Columbias are hot-air



ior Hot-Water Incubator, Capacity 130 Eggs, Manufactured by Cyphers Incubator Company.

tors, also two in number. They hold nd 250 hen eggs and are to be sold markably low prices.

Cyphers Company's complete 200- catalogue for 1915, entitled "The Profits in Poultry Keeping," tells all about these new popular priced Cyphers machines. Write for a free copy today, mentioning this journal, and also ask for separate free circular showing the new Superior and Columbia Incubators in their natural colors.

Perhaps you may ask yourself this ques-

Columbia Hot-Air Incubator, Capacity 250 Eggs, Manufactured by Cyphers Incubator Company.

tion: "Why should the Cyphers Company build these new low-priced hatching machines and sell them in competition with their world-famous Cyphers Incubators?" Three answers are offered in this limited space, as follows:

First, there undoubtedly are many persons who do not feel that they can afford to pay the prices charged for the Cyphers. They need an incubator and want in every respect as good a "hatcher" as they can get anywhere for the money they can spare to put into it. To meet this demand the Cyphers Company offers the two Columbia hot-air machines, one of which is illustrated herewith.

Second, no doubt there are many prospective buyers of incubators who still believe that hot-water is a better or safer "heating element" for an incubator than hot-air. The two Superior Incubators, as manufactured by Cyphers Incubator Company, are offered to this trade and they are guaranteed to do satisfactory work in every case when operated according to directions.

Third, the manufacture of these two new styles of popular-priced incubators is in full accord with the business aim of the Cyphers Company, which is this, as stated by its president: "To manufacture for the poultry public whatever it wants and needs, provided the article, whether it is a leg-band or a mammoth incubator, has practical value and will give genuine satisfaction."

Write today for the 1915 catalogue above mentioned, also for the color-plate circular, addressing CYPHERS INCUBATOR COMPANY at its place of business nearest you, as follows: Home Offices, Buffalo, N. Y.; New York City, N. Y., 41 Barclay St.; Boston, Mass., 12-14 Canal St.; Chicago, Ill., 329-331 Plymouth Court; Kansas City, Mo., 317-319 Southwest Boulevard; Oakland, Cal., 2127-2131 Broadway; Dallas, Texas, 316-318 N. Preston St.; London, England, 121-123 Finsbury Pavement.

White Leghorns—YESTERLAID Strain. Pullets lay at 4½ months. Bought by 20 Experiment Stations. All stud males grand-dam record of more than 440 eggs in 2 years. Prices very reasonable. Our methods bring success. Details free. YESTERLAID EGG FARMS CO., Dept. 5, PACIFIC, MISSOURI.

BUFF ORPINGTONS

All prize winners. I offer for sale the following prize winners: 1st cockerel, 1st pen hens, 3d hen, 3d pullet Cleveland, Jan. 1914, 2d pullet, 2d pen pullet, 4th cockerel Cleveland, Dec. 1913. 1st hen, 1st and 4th pullet Canton, Jan. 1914. 1st and 3d pullet Randall, 1913. 1st hen Meadville, 1914, at prices below their value. Also 40 cockerels and 80 pullets—every one bred from premium winning birds on both sides.

A. C. WILLIAMS RAVENNA, OHIO

ORPINGTONS

SINGLE COMB BUFF

Exhibition and Breeding Birds in large numbers; plenty of good, big, husky cockerels and pullets left, many over standard weight, broad, low down and blocky, nearly all one could desire with one nice even shade of buff throughout. Do you need hens or pullets to complete your exhibit for some show? If so, write me fully. State where you want to exhibit and give me an idea of the price you wish to pay. I guarantee every bird to give satisfaction. I also have plenty of breeders left at low prices.

SINGLE COMB WHITES

The best selection I ever had. Plenty of pullets, hens and cockerels left; many up to standard weight, large frames, deep, full breasted, broad and blocky, short legs, good color; just right for exhibition purposes. Many breeders offered this month at low prices. If you need an exhibition bird write me fully. Time is getting late. Describe what you want, state the show you expect to exhibit at and an idea of the price and I will tell you what I can do for you. Every bird goes subject to approval. Your money back if birds are not satisfactory if returned within 48 hours. I have quality. You take no chance. Write me today.

CORNING EGG FARM

Breeders of The Strain of S.C. White Leghorns "which cannot be surpassed."

Eggs for Hatching We have sold every bird that can be spared this season. Last season we sold more eggs for hatching than ever before, not withstanding increased facilities and

Were forced to decline orders for over 100,000 hatching eggs.

Breeding pens have again been increased for the coming season. Every hen has passed her first moult—we never mate twelve months old pullets. If you desire to raise the best and most profitable birds, you should place your order now for hatching eggs. Send for free pamphlet full of fine half tones of the farm.

Corning Egg Farm, Inc. **Bound Brook, New Jersey**

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. **All copy for Classified Ads must reach us by the 17th of month preceding date of issue.**

The Fulfillment of Our Promise

IN last month's journal we explained the purpose of our organization. We announced that we were ready to supply everything required by any poultry breeder at the lowest price, quality considered, and promised, in consideration of your patronage,

A Square Deal

WE SELL

Hall Mammoth Incubators	6 in 1 Exercisers	Certi-Quality Scratch Feeds
Hall Colony Brooders	Day-Old Chicks	Certi-Quality Mashes
Lamp Incubators	Eggs for Hatching	Certi-Quality (Maurers) Meat Scraps
Mann Bone Cutters	Breeding Stock	Certi-Quality Oyster Shell and Grit
Afton Feed Mixers	Disinfectants	Poultry Remedies
Drinking Founts	Roofing Paper	Egg and Chick Boxes
Feed Hoppers	Fencing	Egg Cases

All Equipments and Supplies

The business transacted by this company during the past month shows the readiness of poultrymen to put us to the test, and the second and third orders from the same people prove that we are fulfilling our promise. We are in a better position than ever to please and serve you. Our practical experience is at your disposal.

Let us know your wants and we'll make our recommendations without a cent of cost to you. If your problem is one of birds, their care and development, write Mr. Punderford, who is the owner of Monmouth Farms, and so great an authority on this subject that he has served as Judge at the leading Poultry Shows for several years; if of the general conduction of your plant, write Mr. Fisk. He owns and operates Wilburtha Poultry Farms, one of the largest and most successful in the country today. Our Mr. Baillard will be glad to answer your questions about incubation and brooding.

Our Exhibit at the Palace Show should be very interesting, instructive and profitable to you.

PATENTS

Patent Your Invention. It May Make Your Fortune

Poultry inventions a specialty. Expert service. Terms reasonable. Write me before you apply for a patent. Information free.

LESTER L. SARGENT, Patent Lawyer
933 Eye St., N. W. Washington, D. C.

Why Feed by Hand?

You can take a FULL BUSHEL of feed—pour it in to the hopper of this—the peer of all poultry feeders—go about your other duties and rest assured that the flock is being properly fed.

No theiving birds, mice or rats will get any of the feed, neither will any feed lay on the ground to get musty and unfit to eat. The birds get just what they require to build up their system and keep them in the best of condition.

When these feeders are installed we guarantee that the egg production of your flock will increase—the feed bills decrease and work of feeding the chickens will be reduced to a minimum.

Save Money

You are wasting money every day by hand feeding.

You know what your time is worth—what feed is worth and what eggs are worth—you be the judge and the jury—and if you find that you can save money by filling the the hopper of an automatic feeder once a week—a feeder that will positively feed your chickens better than any man can by hand-feeding and which will give the flock the necessary exercise in order to obtain the feed—then look into this

Just Think

How many trips do you make to the chickens when feeding by hand—how much time do you devote to feeding which could be more profitably devoted to other work—how much grain is eaten by rats, mice and sparrows—and after all, are you feeding the chickens so as to get the most profit out of the flock, or are the stronger ones getting their share and the weaker ones getting just enough to keep them alive but not enough to instill life into their laying organs?

Simplex "Faultless" Feeder

If Ever Value Was Offered It Is Here

The full bushel size Simplex Faultless Feeder is what most everyone terms $5.00 value for $2.00. This full bushel size is made of extra heavy galvanized iron—reinforced throughout—hopper height 18 inches—width and reflector 13½ inches—hangs up by a bale or can be set up on legs. The value of this particular size cannot be described with printers ink—it must be seen to be appreciated—**one look** convinces the most skeptical that what we say is true—it's the biggest value ever offered—not excepting the big value we offer in the smaller sizes.

Again We Say—Money Back If Not Satisfied

If you purchase your poultry supplies from a local dealer—take this advertisement to him—ask him to order a sample feeder, if he has not a "Faultless" in stock—accept no substitute—it has no equal.

If you have no local dealer in your town—or if your local dealer will not supply **Simplex Faultless Feeders,** send direct to us—it will be shipped promptly and the express charges will be refunded to you by a credit check. Should you not be satisfied in every way—return the goods and we will return the money you paid for them.

ASK THE JUDGES

First Prize Cockerel at Memphis, 1914
Cut made from unretouched photo.

What O. B. Andrews' Famous Efficiency Strain Barred Plymouth Rocks and S. C. W. Leghorn accomplished at the great Memphis Tri-State Show, October 3d, and they will tell you that my exhibit of fifty-two birds was one of the finest displays ever cooped.

My record was truly a magnificent one in the strongest competition ever seen in the South. The Leghorn and Barred Rock entries were the largest ever seen south of the Ohio River. Just ponder for a moment on one breeder at such a show winning the following-

> **1st White Leghorn cockerel, 1st Barred Rock cockerel, medal for champion Leghorn male, medal for champion Barred Rock cockerel, cup for best cockerel exhibited from State of Tennessee, also 5th Leghorn hen, 2d Barred Rock hen and 3d exhibition pen. Every bird was BRED and RAISED at Efficiency Strain Farm.**

I can't win at all the shows because I cannot make them. I pick the best, however.

What Efficiency Strain has done for me, in my wonderful winnings at Knoxville, Chattanooga, Atlanta, New Orleans, Memphis and other great shows—it will do for you. I have hundreds of Rocks and Leghorns in my yards in pink of condition—ready to win for you. Breeding stock—exhibition birds on hand at all times.

If interested in these two grand breeds, why not get Efficiency Strain and have the best?

Barred Rock Eggs, (either mating) from prize matings, **$6.00 per 15**
White Leghorn Eggs, from my best pens, **$4.00 per 15**

If you are troubled with lice and mites, send $1.00 for box of "Deathmite." I guarantee satisfaction or money refunded.

"Ask the judges" and send for beautiful catalogue.

O. B. ANDREWS, CHATTANOOGA, TENNESSEE

Originator-Breeder Famous Efficiency Strain Barred Plymouth Rocks and Single Comb White Leghorns

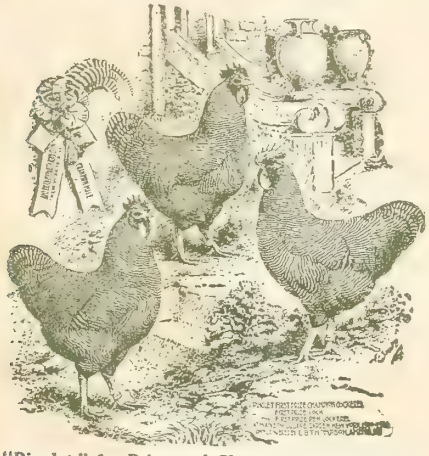
E·B·Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.



The Imperial prize of the show, Sweepstakes Special for Champion Male.

Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

GRAND BIRDS FOR SALE

Elegant 70-page catalogue upon request.
